GENERAL INFORMATION

LOCATION, HISTORY, AND ADMINISTRATION

THE MAIN CAMPUS OF THE UNIVERSITY OF ILLINOIS IS situated partly in the city of Urbana and partly in the city of Champaign, in Champaign County, about fifty miles northeast of the geographical center of the state. The two municipalities form one community of about thirty-four thousand inhabitants. The railway, express, mail, telegraph, and telephone services of both cities are available for the University.

The College of Medicine, the College of Dentistry, and the College of Pharmacy are located in Chicago, near the Cook County Hospital.

History

The University was incorporated by an act of the General Assembly, February 28, 1867, as the Illinois Industrial University. This action was taken following an act of Congress, known as the "Morrill Land Grant," whereby the national government gave to each state in the Union public land scrip equal to 30,000 acres for each senator and representative in Congress, "for the endowment, support, and maintenance of at least one college whose leading object shall be, without excluding other scientific and classical studies, and including military tactics, to teach such branches of learning as are related to agriculture and the mechanic arts . . . in order to promote the liberal and practical education of the industrial classes in the several pursuits and professions of life." In addition to the original endowment, Congress has made provision for the Land Grant institutions by supplementary acts carrying annual appropriations, which in most cases are for specific purposes. The principal support of the University is provided by the State of Illinois, partly through a special tax of one-third mill, and partly by appropriations from the general revenue.

The University opened on March 2, 1868. The number of students enrolled was fifty; the faculty consisted of the Regent and two professors. During the first term another instructor was added, and the number of students increased to seventy-seven—all men. Instruction was given in algebra, geometry, physics, history, rhetoric, and Latin. During the autumn of 1868 a chemical laboratory was provided, and laboratory work in botany was begun the following year. In 1870 a mechanical shop was equipped, and here was begun the first shop instruction given in an American university.

On August 26, 1870, the Board of Trustees voted to admit women as students. In the year 1870-1871 there were twenty-four women enrolled, and since that time women have constituted from one-sixth to one-third of the total number of students.

By the original state law the University could not grant diplomas and degrees: certificates showing the studies pursued and the grade in each were given instead. The certificates were unsatisfactory, and in 1877 the General Assembly gave authority to confer degrees and issue diplomas.

In 1885 the General Assembly changed the name from the Illinois Industrial University to the University of Illinois.

In 1892 graduate work was undertaken under the name of the Graduate School, and in 1907 the executive faculty of the school was organized. The first Summer Session was held in 1894. The work in law was organized as the School of Law in 1896—the name being changed to the College of Law in 1900. The Department of Music became the School of Music in 1897 and was included in the College of Fine and Applied Arts in 1931. The General Assembly made a special appropriation in 1900 to establish courses of training for business life, and the Trustees organized the Courses in Business Administration, which in 1915 became the College of Commerce and Business Administration. In 1905 the Trustees established a School of Education, which became the College of Education in 1918. The General Assembly in 1909 established the Department of Mining Engineering (changed to Department of Mining and Metallurgical Engineering in 1934). In 1913 the College of Literature and Arts and the College of Science were united to form the College of Liberal Arts and Sciences. In 1927 the work in journalism, previously administered in the College of Liberal Arts and Sciences, was organized to form the School of Journalism. In 1931 the Department of Art and Design in the College of Liberal Arts and Sciences, the Department of Architecture in the College of Engineering, the Division of Landscape Architecture in the College of Agriculture, and the School of Music were combined into the College of Fine and Applied Arts. The School of Physical Education was established in 1932. The University Extension Division, to provide instruction in certain courses by correspondence, was established in 1933.

In 1897 the School of Library Economy, established in 1893 at the Armour Institute of Technology in Chicago, was transferred to the University, the Director of that school was appointed Librarian of the University, and the Library School was opened.

The Chicago College of Pharmacy, founded in 1859, became the School of Pharmacy of the University in 1896, and the name was changed to the College of Pharmacy in 1932.

The College of Physicians and Surgeons of Chicago, established in 1881, was affiliated with the University under a lease in 1897. It was closed in 1912. In 1913 the stock and other assets of the College of Physicians and Surgeons of Chicago were given to the University, and the College of Medicine was reopened.

The School of Dentistry, which was organized as a department of the College of Medicine in 1901, became the College of Dentistry in 1905. It was closed in 1912 and was reopened in 1913.

Research in agriculture was begun at an early date, and the Agricultural Experiment Station was founded in 1888. The Engineering Experiment Station was established in 1903. Similar organizations on a smaller scale are the Bureau of Educational Research (1918), the Bureau of Business Research (1921), the Bureau of Institutional Research (1933), and the Bureau of Community Planning (1934). Facilities for research have been increased by cooperation with the scientific survey divisions of the State Department of Registration and Education, which are located in University buildings at Urbana, and the State Department of Public Welfare, which has a group of hospitals and laboratories adjoining the University buildings in Chicago.

Administration

The original state law placed the University under the control of a Board of Trustees, consisting of the Governor, the Superintendent of Public Instruction, and the President of the State Board of Agriculture, who were members *ex officio*, and twenty-eight citizens appointed by the Governor. The chief executive officer was called the Regent and was made *ex officio* a member of the Board and presiding officer of both the Board of Trustees and the faculty. In 1873 the number of members was reduced to eleven—the Governor and the President of the State Board of Agriculture, *ex officio*, and nine others, who were still appointed by the Governor. Since 1873 the President of the Board has been chosen by the members from among their own number for a term of one year. In 1887 a law was passed making membership in the Board elective at a general state election and restoring the Superintendent of Public Instruction as a member *ex officio*. There were then, therefore, three *ex officio* and nine elective members. In 1917 the General Assembly passed the law reorganizing the administration of the State Government, and under this law the office of the President of the State Board of Agriculture was abolished on January 1, 1919. There are now, therefore, eleven members, two *ex officio* and nine elective.

The administration of the University is vested by the Board of Trustees in the President, the Provost, the Senate, the faculties of the colleges and schools, the deans of the colleges, the directors of the schools, and the general administrative officers. The Council, an advisory body, consists of the President, the Provost, the Dean of the Graduate School, the deans of the colleges, the directors of the independently organized schools, the Director of the Library, and three members of the Senate.

The office of executive head of the institution has been held by nine persons: Dr. John Milton Gregory, Regent from 1867 to 1880; Dr. Selim Hobart Peabody, Regent *pro tempore* from 1880 to 1881 and Regent from 1881 to 1891; Dr. Thomas Jonathan Burrill, Acting Regent from 1891 to 1894; Dr. Andrew Sloan Draper, President from 1894 to 1904; Dr. Edmund Janes James, President from 1904 to 1920; Dr. David Kinley, Acting President from 1919 to 1920, and President from 1920 to 1930; Dr. Harry Woodburn Chase, President from 1930 to 1933; Dr. Arthur Hill Daniels, Acting President from 1933 to 1934; and Dr. Arthur Cutts Willard, President since 1934.

All students have the direct use of 15,000 volumes in the general reading room, seating 500, and the three reserved-book reading rooms, together seating 500. The browsing room, shelving about 1,800 selected volumes, is open to students for general reading not connected with courses of study. Besides the general reading rooms, there are special rooms for the Classics, History and Political Science, Economics and Sociology, the Modern Languages, Education, and for Seventeenth century books, which have a combined seating capacity of more than 400. The total number of seats in the building is about 2,000, including 140 in cubicles in the book-stacks. The Union Card Catalog of books in several of the other principal libraries in the United States contains about 3,000,000 cards available for bibliographical uses and is an aid in arranging for inter-library loans. The Library also has most of the bibliographies commonly used by the book trade in this and other countries, together with related reference works and catalogs in many languages.

Over 8,500 periodicals are currently received, including over 200 newspapers published in Illinois, and about 125 foreign language newspapers published in the United States.

The Library has purchased, or has received by gift, several special collections which have been incorporated into the general stock of books:

The *Dziatzko Collection of Library Economy*, 300 volumes, 250 pamphlets, bought in 1905. The *Dittenberger Collection of the Classics*, 5,600 items, bought in 1907. The *Heyne Collection*, about 5,000 items, principally on German philology and literature, bought in 1909. The *Karsten Collection*, principally on French and German philology and literature. Kittell*, of Pana, Illinois, 2,933 volumes, bequeathed in 1931.

MUSEUMS AND COLLECTIONS

NUMEROUS COLLECTIONS of objects of artistic, historic, or scientific value are maintained by the University and exhibited by its various departments. Those of classical art and archeology, Oriental culture, European culture, natural history, botany, entomology, geology, and zoology are under the care of the College of Liberal Arts and Sciences.

Art Collections.—Works on display in the Architecture Building include a collection of casts, a collection of original oil paintings, many by notable American artists, a collection of paintings, lithographs, and brass repousse panels allocated to the University by the Public Works Administration of the Federal Government in 1934 and 1935, a number of bronzes, water colors, lithographs, German and Japanese prints, Chinese embroideries, and other art objects. The Lorado Taft collection including plaster casts of antique and modern sculpture and plaster and stone originals of much of Mr. Taft's own work was acquired in 1937. This is displayed in part in the Architecture Building, the Library, the Auditorium, Lincoln Hall, Smith Memorial Hall, and on the campus. The rest has been stored until such time as it can be displayed correctly. The Merle J. and Emily N. Trees collection of paintings, containing old masters and moderns, was presented to the University in January, 1938. In the East Gallery of the Architecture Building current art exhibitions are hung.

Museum of Classical Archeology and Art.—This museum is in Lincoln Hall. It contains reproductions of a considerable number of the more important works of art of pre-Greek, Greek, and Roman civilization. There are also original exhibits from each of these periods, consisting chiefly of smaller objects, such as Cretan seals, numerous Greek and Roman coins, with a series of monetary tokens illustrating the development of currency, terra cotta statuettes, vases, bronzes, and fragments of Greek papyri. Many small articles of the Greek period in Egypt, discovered in the campaigns of the Egypt Exploration Fund, have been received through the generosity

of the late Mr. W. G. Hibbard, Jr. There are a number of water-color pictures principally of Minoan frescoes and Pompeian scenes, as well as a series of mounted photographs for classroom use.

Museum of European Culture.—This museum, located in Lincoln Hall, contains original material and reproductions to illustrate many periods and many aspects of European civilization. Among its material are casts of Romanesque, Gothic, and Renaissance sculpture; color reproductions of paintings, including the rare Pol de Mont reproductions of early Netherlands masterpieces; original engravings by Albrecht Dürer and some of his contemporaries; originals and facsimiles of medieval manuscripts, early printed books, and early maps of the World; originals and reproductions of arms and armor; original Paleolithic, Neolithic, and Bronze Age antiquities, including the collection of Professor Baudouin, formerly president of the French Prehistoric Society; theatre models and prints of theatres and actors; peasant costumes and other textile materials; ship models; historical groups made by Dwight Franklin; originals and reproductions of early wood carving, early church ivory carving, and metal work; carbon prints of cathedrals and other pictorial material; several hundred coins; reproductions of runic inscriptions, early musical instruments, etc.; rare china, including Delft ware collected by Mrs. John Milton Gregory and given by her daughter, a pink lustre tea set given by Mrs. Frank Lincoln Stevens in memory of Professor Frank Lincoln Stevens, and a Dresden figure-group, "The Music Room," given by Mrs. Pearl Silberman in memory of her daughter Cyrille Gertrude, class of '31. Several early American pieces have recently been added to the Museum by Mrs. A. H. Lybyer and Mrs. C. A. Hayward.

Oriental Museum.—This museum is in Lincoln Hall. Among its collections are 1,700 unpublished cuneiform tablets, the majority from Drehem, Umma, and Larsa, dating from the twenty-ninth to the twentieth century B.C.; others from the period of Nebuchadnezzar; Babylonian seals; fragments of Assyrian and Babylonian bricks with royal inscriptions; pottery, slate palletries, mummy case fragments, mummified sacred birds, and small objects from Egypt, the gift of the late Mr. W. G. Hibbard, Jr.; Egyptian alabasters; squeezes of Hittite and Assyrian inscriptions, lent by Dr. B. B. Charles, of Philadelphia; squeezes of Phoenician inscriptions; pottery and pottery fragments from ancient sites in the Near East; objects from Palestine, including two Hebrew manuscripts, models of domestic furniture, pottery, and prehistoric implements; and unpublished photographs from the Near East.

Museum of Natural History.—This museum is on the third and fourth floors of the Natural History Building. It contains many exhibits in archeology, geology, and zoology, illustrating the classification, evolution, variation, geographic distribution, and habitat relations of animals. Special exhibits include the commercial uses of natural resources; ethnology of the American Indians; Eskimo material obtained by the Crocker Land Expedition; a special exhibit of the ceramic art of the prehistoric Indians of Illinois, including the culture of the Hopewell and Cahokia groups; and the bird life of Illinois, illustrating the migration and geographic distribution of species by colored maps. As part of the exhibition of historical geology, there is a synoptic series of animal life carried down to orders, including extinct groups. A stratigraphic collection represents the principal types of animals and plants found in American geological formations. Special collections include the Blaschka glass models of invertebrate animals and the Barnum and Hess collection of birds' eggs. The zoology of Illinois is well represented. There is a complete collection of the land Mollusca of Illinois, numbering 20,000 specimens. The research material in the museum includes Mollusca collected by Daniels, Hinkley, Nason, Baker, Worthen, and Ferriss, embracing 500,000 specimens, including a collection of species from North and Middle America, with many types. Among the insects are the Bolter and Nason collections numbering 170,000 specimens. The fossil series include the Daniels and Carr collections of coal plants from Mazon Creek, Grundy County, Illinois; a series of the animal life of the same formation; the Nason and Baker collection of Devonian animal life; and collections of Pleistocene life obtained from the Illinois Geological Survey and by the field work of the museum staff. The research collections number more than one million specimens.

Botany.—The Herbarium, in the Natural History Building, contains 258,500 sheets and specimens in boxes properly labeled, valued at \$45,000. It is representative of the higher plants and fungi of Illinois and forms a collection for the general flora of the

United States. The herbaria of Brendel, Welsch, Schneck, Andrews, Mrs. Agnes Chase, and Hill are valuable for students of the Illinois flora. The Herbarium has acquired by gift the collection of Dr. and Mrs. W. F. Moffatt, comprising 14,000 sheets, and the J. R. Weir collection (1,672 packets) of Old and New World Lorantheaceae. Because of the interest of the late Professor Burrill and his special students, Clinton, Earle, Seymour, and others, in the study of parasitic fungi, the part of the Herbarium devoted to the representation of plants of this group is rich in material records of investigation, to which has been added the Stevens collection of Porto Rican fungi, 14,000 numbers. The published "exsiccatae" in this group comprise 693 centuries. A set of *Phycotheca Boreali-Americana*, representing over 2,000 named species, presented by Mrs. Mary S. Snyder, has increased the value of the Herbarium for students of algae.

Entomology.—The entomological collections include a series of 100,000 pinned specimens, representing about 3,500 common species; another series of 15,000 specimens, each hermetically sealed in glass, representing the life stages and injury of all the major American economic insects; about 5,000 vials of the immature stages of insects; and the MacGillivray collection of Tenthredinoidea, consisting of about 1,000 species and 400 type specimens, which are kept in the Natural History Building with the collections of the State Natural History Survey.

Geology.—The Department of Geology and Geography has charge of collections of materials classified under the headings of geology, mineralogy, paleontology, and geography. Some of the departmental materials are in the Museum of Natural History. The department cares for three cases of exhibits dealing with the material covered in general geology courses. Study collections include 12,000 rock specimens, 5,000 thin sections for microscopic study, 12,000 mineral specimens, and more than 100,000 fossils, which include over 1,200 type specimens. The paleontological collections are available for research, especially Silurian faunas and those representative of Illinois. Among the collections available for advanced studies are those of Tyler, McWhorter, Hertzner, and the greater part of the specimens collected both privately and for the State Geological Survey by A. H. Worthen, T. E. Savage, A. H. Sutton, and H. W. Scott. The Department also maintains a file of the United States topographic maps, a collection of United States Geological Survey folios, foreign topographic maps, relief models and geographical maps, and several thousand lantern slides, illustrating geological and geographical features throughout the world. A collection of about 2,000 ocean charts assembled from all parts of the world by F. P. Shepard is available for advanced study.

Zoology.—The zoological collections present a synoptic view of zoology, including representations of all orders and classes. There are also the Ziegler wax models and sections, and other preparations showing the embryology of vertebrates and invertebrates. An extensive collection of animal parasites and the Kingsley and Eycleshymer embryological collections are especially noteworthy. The collections of the State Natural History Survey are available for illustrative purposes in classwork and for original research by advanced students in zoology. Extensive collections, particularly in the group of Mollusca, are available for study and graduate teaching in the research collections of the Natural History Museum. As an outdoor laboratory, the University maintains two tracts of woodland a few miles northeast from Urbana (the William Trelease Woods and the Brownfield Woods).

Agriculture.—The agricultural departments maintain collections illustrating their work. These include specimens of standard varieties of corn; wax models of fruit, vegetables, and nuts; a horticultural herbarium; specimens of breeds of live stock; farm machinery; and exhibits of negatives and samples showing the progress of investigations with fruit, crops, and soils.

Engineering.—The departments of the College of Engineering maintain collections of materials drawn from their respective fields. The Department of Ceramic Engineering has a collection of modern wares representing types of bodies, glazes, and methods of decoration. The Department of Mechanical Engineering is the custodian of a 600 h.p. vertical triple-expansion engine, directly connected to an electric generator, a type of machine in use in power-stations twenty years ago, and machines of historical value, including a 25 h.p. horizontal, double-acting, single-expansion steam engine, designed and built in 1871, with the help of students, by Professor S. W. Robinson, the first professor of mechanical engineering at the University. This engine supplied power to the first shop in this country in which instruction in the mechanic

arts was given. In the Mining Museum is a collection of models showing the methods of working coal and ore mines, both sectionalized and operating mining machines, and appliances. Here also are collections of photographs and blue prints illustrative of mining and metallurgical design and construction; and collections of specimens of ores, coals, non-metallic minerals, and metallurgical products. The Department of Railway Engineering has exhibits of track rails exemplifying practice since the beginning of railway construction; many details employed in car and locomotive construction, historic and modern; and a collection of photographs and prints.

Library Science.—The Library School has made a collection of books and pamphlets on library science; library reports, bulletins, and catalogs; bookplates; books, photographs, and lantern slides on library architecture and the history of books, printing, and libraries.

Medicine.—The College of Medicine has two museums: (1) Anatomy, including gross anatomy, histology, embryology, and neurology; (2) Pathology, including general, special, and medico-legal specimens. The Anatomy Museum has a complete set of cross sections of the human cadaver, dissections of the head and limbs, a collection of human embryos of different ages, numerous x-ray negatives, wax and metal models, etc.

Pharmacy.—The museum of the College of Pharmacy for many years on display in the old building is in the process of being moved and will not be displayed during the current year.

ADMISSION TO THE COLLEGES AND SCHOOLS AT URBANA

OFFICIAL CREDENTIALS should be sent directly from each institution previously attended to the Registrar at Urbana soon after the close of the school year in June, and on receipt of these, the Registrar will communicate with the applicant regarding his admission. If the credentials are not received until the week before the opening of the University, it may not be possible for the Registrar to notify the applicant of his status prior to his arrival on the campus. The University will not issue a permit to enter except on the basis of official detailed credentials filed in advance which meet the requirements for admission. Freshmen are required to be on the campus for the freshman week program preceding registration in September.

It is particularly important that candidates for admission to the pre-medical curriculum make early application by submitting their credentials immediately upon graduation from the secondary school, because the date of application will determine the priority for transfer later to the College of Medicine.

Applicants for admission who come from foreign countries must bring complete official credentials. Certificates from Oriental and Slavic countries must be accompanied by certified translations.

Qualified applicants are admitted at the beginning of either the first semester or the second semester, except that the Library School and the Colleges of Medicine, Dentistry, and Pharmacy admit new students at the beginning of the first semester only. Applicants for admission to the College of Engineering, the College of Law, and the School of Journalism will find it to their advantage to enter the first semester rather than the second.

Physical Examinations

All students, except those entering only for summer sessions, who have not previously taken a physical examination at the University, must take such an examination. Before registration, a new student must secure an appointment

with the University Health Service for his physical examination. The examination is given by the University at the time of appointment without cost to the student. If the student fails to take the examination at the appointed time and does not present an excuse from the Registrar, a fee of \$5.00 is charged to provide for a special examination, or he will be required to be examined at his own expense outside the University in a manner meeting the requirements of the Health Service.

Candidates for admission to the School of Physical Education must pass special physical and medical examinations.

General Requirements for Admission to the University

Age.—An applicant must be at least sixteen years of age. The dean of the college concerned, however, may admit on petition a student fifteen years of age who meets all other requirements for admission and who is to reside, while attending the University, with his parents or guardian, or with someone selected by them.

High School Graduation.—To be admitted by certificate, an applicant must be a graduate of an accredited secondary school. If the school is in Illinois, it must be accredited by the University of Illinois; if located elsewhere, its rating must be equivalent to accreditation by the University of Illinois. *For a list of sources from which credits are accepted on certification, see page 71. Conditions under which non-graduates may be admitted are also given on page 71.*

High School Scholarship.—An applicant for admission to the University whose rank in scholarship is in the upper three-quarters of his graduating class and who meets the requirements as stated below is admitted by certificate to full freshman standing. Furthermore, the Registrar is authorized to admit, without adhering to the usual requirements as they pertain to majors and minors, an applicant whose rank in scholarship is in the upper fifty per cent of his graduating class. Such a student, however, must present those specific high school courses that are prerequisite to courses in the curriculum which he desires to follow in the University.

A graduate of an accredited high school whose rank in scholarship is in the lowest quarter of his graduating class and who meets the requirements as stated below is admitted by certificate to probationary status and, in connection with his first registration in the University, is required to take such tests as may be prescribed by the Personnel Bureau. Such a student, immediately upon registration, is placed under the special supervision of the dean of the college or the director of the school in which he is enrolled. He may be required by the dean or director to carry a reduced program of work or a program especially arranged to meet his needs.

The student's rank is to be based on work completed in grades nine, ten, eleven, and twelve in the case of four-year high schools, and on work completed in grades ten, eleven, and twelve in the case of three-year senior high schools.

Fifteen Units Required.—Fifteen units of acceptable secondary school work are required, including the following:

I. Two majors and one minor, selected from Groups 1-5 below. One of the majors must be English. (See definitions of *Unit*, *Major*, and *Minor* below.)

II. A total of at least nine units from the fields of English, foreign language, mathematics, science, and social studies, including preparation amounting to a major or minor sequence in at least three different fields. (See Groups 1-5 below.)

III. All subjects prescribed for the curriculum which the applicant desires to enter, as stated in the table on pages 72 and 73.

IV. The six remaining units necessary for admission may be selected from any of the high school subjects which are accepted by an accredited school toward its diploma and which meet the standards for accrediting as defined by the University of Illinois. Fractional credits of the value of less than one-half unit will not be accepted. Not less than one unit of work will be accepted in a foreign language, elementary algebra, plane geometry, physics, chemistry, or biology.

The University realizes the obligation of the high school to meet fully the needs and interests of all its pupils. It, therefore, believes that high schools should offer courses in such fields as agriculture, art, commerce, home economics, industrial arts, music. Furthermore, by accepting them for admission, it recognizes that they contribute to satisfactory preparation for college work.

Definitions

Unit.—A *unit course* of study in the secondary school is a course covering an academic year and including not less than the equivalent of 120 sixty-minute hours of classroom work. Two hours of work requiring little or no preparation outside the class are considered as equivalent to one hour of prepared classroom work.

Major.—A *major* consists of three unit courses in one field. (See special requirements for a major in each of the various fields as stated below.)

Minor.—A *minor* consists of two unit courses in one field. (See special requirements for a minor in each of the various fields as stated below.)

Majors and Minors

The required majors and minors defined above may be selected from the following five groups:

(1) *English.*—(In all cases one major must be in English.) Only courses in history and appreciation of literature, composition (including oral composition when given as a part of a basic English course), and grammar will count toward a major.

(2) *Foreign Language.*—Three units in one language constitute a major. Two units in one language constitute a minor.

(3) *Mathematics.*—Only courses in algebra, plane geometry, solid and spherical geometry, and trigonometry will be accepted toward a major or minor in this subject. (General mathematics may be accepted in lieu of algebra and geometry in cases where the content of the course is essentially the same as that ordinarily included in algebra and geometry.)

(4) *Science.*—(Including physics; chemistry; biology, or botany and zoology; general science, or physiology and physiography; astronomy; and geology.) The three units required for a major must include at least a total of two units chosen from one or more of the following subjects: physics, chemistry, botany, and zoology. Biology may be offered in place of botany and zoology. The two units required for a minor must include at least one unit from the above subjects.

(5) *Social Studies.*—(Including history, civics, economics, commercial or economic geography, and sociology.) The three units required for a major must include at least two units in history. The two units required for a minor must include at least one unit in history.

The second column of the table on pages 72 and 73 shows the special subjects prescribed for admission to the various undergraduate curricula. These are the subjects which are considered essential preparation and without which the student may not be admitted. The requirements are stated in units of credit and not in terms of majors and minors. These prescribed subjects may be counted toward fulfilling the major and minor requirements. In planning his high school work the prospective student should be guided also by the recommended subjects, shown in the third column.

Graduates of Unaccredited Secondary Schools

Graduates of unaccredited secondary schools which offer four years of instruction are admitted by examination. The Registrar, however, is authorized to admit a student who is a graduate of such an unaccredited secondary school and whose general scholarship rank is in the upper twenty-five per cent of his graduating class, subject to his passing at the University in advance of admission: (1) a test in English composition and rhetoric; and (2) such other examinations and tests in high school subjects as may be necessary to complete the University entrance requirements and the special requirements of the chosen curriculum.

Students from Accredited Secondary Schools Who Are Not Graduates

An applicant who has attended, but who has not been graduated from, an accredited school, must pass entrance examinations in English composition and four units in additional subjects to be designated by the University authorities. The remaining units required for admission may also be made in entrance examinations or may be offered by certificate from an accredited school.

Graduates of Three-Year Senior High Schools

In the case of graduates of a school organized as a three-year senior high school, including grades ten, eleven, and twelve, at least twelve units must have been taken in the senior high school. Two majors and one minor, or four minors, must be from the fields of English, foreign language, mathematics, science, and social studies. (See Groups 1-5 on page 70.) Either a major or a minor must be from the field of English. One unit of a foreign language and one unit of mathematics may be accepted from work completed in the ninth grade as a part of the majors and minors, provided at least seven units of senior high school work have been completed in subjects included in the above enumerated fields. The remaining five units may be selected from any of the senior high school subjects which are accepted by an accredited high school toward its diploma and which meet the standards for accrediting as defined by the University.

The transcript of credits certified by the senior high school must show any credit in mathematics or foreign language accepted from the ninth grade if these subjects have been continued in the senior high school. Fractional credits of the value of less than one-half unit will not be accepted. Not less than one unit of work will be accepted in a foreign language, elementary algebra, plane geometry, physics, chemistry, and biology.

Sources of Acceptable Credits

The credits required for admission to the undergraduate departments, as detailed above, may be secured in three ways: (1) by *certificate* from an accredited high school or other secondary school; (2) by *examination*; and (3) by *transfer* from another university or college of recognized standing.

NOTES

¹English.—Only courses in the history and appreciation of literature, and in composition (including oral composition when given as a part of a basic English course), and grammar, will count toward the three units in English required as a major for admission to all curricula. Four units in English, while not required for any curriculum, are recommended by all the colleges and schools.

²Language.—The foreign language requirement for admission to any curriculum is fulfilled by two units in any one of the following: German, French, Spanish, Italian, Latin, Greek. For some curricula three units in one language are recommended, and for some it is advantageous to have four units in one language or a combination of languages. Less than one unit in a language is not acceptable for admission.

³Mathematics.—In Engineering and Fine and Applied Arts where advanced algebra or solid geometry, or both, are required, students who have only one unit in algebra and one unit in geometry, and who meet all other entrance requirements, may be admitted on condition that the deficiency be removed during their first year of residence. Where one unit in algebra and one unit in geometry are required for admission, general mathematics will be accepted if the content of the course is essentially the same as that ordinarily included in algebra and plane geometry. For all curricula involving chemistry (to which one unit in physics or chemistry or 2½ units in mathematics are prerequisite), students without credit in physics or chemistry who have only two units in mathematics will be required to take algebra in the University.

⁴Pre-Medical Requirement.—A student entering the pre-medical curriculum as a freshman must have a scholarship rank in the upper half of his high school graduating class. A student transferring to this curriculum from another college or university must have a scholastic average in his collegiate work not less than 3.5 in terms of the grading system of the University of Illinois.

⁵Music Examination.—Each applicant for admission to the School of Music is required to take an individual examination for the purpose of demonstrating that he is qualified and has sufficient knowledge of music to enter courses in applied music. No entrance credit is allowed for this examination.

the basis of his reports, approved by the Committee on Admissions from Secondary Schools, the University accredits all work which is found to be sufficiently well done. For a list of accredited schools, address the High School Visitor, Room 209, Administration Building. Not all the schools named in this list are accredited for the same amount of work, nor all for the same subjects. A student presenting a certificate from any one of these schools is given entrance credit for all the subjects named therein *for which the school is specifically accredited.*

Entrance credits are also accepted on certificate from the following sources:

(1) Schools accredited by the North Central Association of Colleges and Secondary Schools.

(2) Schools accredited to the state universities which are included in the membership of the North Central Association of Colleges and Secondary Schools, provided the certificate shows that the Illinois standard time requirements have been met.

(3) Schools accredited by the Southern Association of Colleges and Secondary Schools.

(4) Schools approved by the New England College Entrance Certificate Board.

(5) High schools and academies registered by the Regents of the University of the State of New York.

(6) The state teachers colleges of Illinois and other state teachers colleges having equal requirements for graduation.

Admission by Examination

University Entrance Examinations.—Entrance examinations are given by the University at Urbana three times each year: in September, immediately before the opening of the fall semester; in January and February, shortly before the opening of the spring semester; and in July, during the summer session. Similar examinations are given in Chicago five times each year, in March, June, August, September, and December. These examinations cover substantially all the subjects required or accepted for admission. For brief outlines of the requirements in the various subjects, textbooks suggested for study, and examination programs, address the Registrar.

Other Examinations.—Credit for admission will be accepted from examinations conducted by the College Entrance Examination Board and by the New York Regents, if passed with a grade of sixty per cent or higher, subject to the requirements of majors, minors, and special subjects as listed on preceding pages.

Admission by Transfer

A person who has attended another college or university of recognized standing will be considered for admission to the University of Illinois on presenting (1) a transcript of his college record, (2) a certificate of honorable dismissal from the institution from which he comes, and (3) an official statement of his preparatory school work.

A person whose record at some other institution comes within either of the following classifications may enter the University only on approval of the dean of the college concerned and under conditions imposed by him: (1) A person dropped from another institution for poor scholarship or for disciplinary reasons. (In the latter case he must also obtain approval of the University Senate Committee on Discipline.) (2) A person whose record shows as much as fifty per cent (or more than twenty-five hours) of unsatisfactory work, i.e., unremoved failures and credits earned with a grade equivalent to the lowest passing grade in the University of Illinois.

No substitutes will be accepted for the high school subjects *prescribed* by the University or for the requirement of high school graduation, except that: (1) A student who comes from an institution rated in Class A by the University with a record of at least thirty semester hours without failures, and with an average grade ten points above the passing grade of the college, may be matriculated in a similar curriculum in the University, irrespective of deficiencies in prescribed subjects (except when necessary as prerequisites for advanced work to be taken here), whether or not he is a high school graduate. (2) The Registrar is authorized to waive the high school graduation requirement, but not the subject requirements, in the case of a transfer student who has completed a year of satisfactory work in a college, normal school, or junior college rated in Class A or Class B by the University.

Credits may be accepted for advanced standing from another university or a college, or a junior college of recognized standing or from a state teachers college.

A student who has passed a course at the University of Illinois may not be given credit for the same course taken elsewhere. In general it is unwise for a student to enter a specialized curriculum at the University as late as the beginning of the senior year. Students intending to transfer to the University should send their credentials to the Registrar as early as possible.

If transferring to the pre-medical curriculum, the student must have a scholastic average in his college work of at least 3.5 in terms of the grading system of the University of Illinois.

The registration of students in chemistry courses, other than the elementary courses open to freshmen (Chemistry 1 through 8b), is restricted to those having a grade-point average of at least 3.5 in all subjects, exclusive of the basic courses in military training and the required work in physical education and hygiene, and an average of at least 3.5 in chemistry courses. Transfer students to be admitted must have a corresponding record in the institution (or institutions) from which they transfer and must maintain a similar average at the University of Illinois.

Students in large number enter the University after completing one, two, or even three years at other universities and colleges in Illinois. In recognition of this situation the University is cooperating cordially and sympathetically with the higher institutions in the state in their endeavor to coordinate their work with that of the University. In order that information may be had in advance in regard to the credit to be allowed from a specific institution, the University, in conference with the colleges, has adopted certain standards for accrediting and has classified the higher institutions within the state in accordance with the manner in which they are able to meet these standards. Students from the colleges which have met these standards in full, on entering the University, receive hour-for-hour credit; but in applying for a degree, they are expected to conform to all the prescriptions and limitations as to credit and as to scholastic status announced for their chosen curriculum or by the colleges of the University in which they enroll. The Registrar of the University, on application, will furnish full information in regard to the transfer from Illinois colleges.

Advanced Standing by Examination

Advanced standing in the undergraduate colleges at Urbana is granted only by examination unless the applicant is from an approved school. Proficiency examinations for advanced standing are offered without fee in all courses normally open to freshmen and sophomores. A student may also obtain the privilege of taking proficiency examinations in more advanced undergraduate courses on recommendation of the head of the department and approval of the dean of the college.

Unclassified Students

Persons over twenty-one years of age may be admitted as unclassified students (not candidates for a degree) in the undergraduate colleges at Urbana, provided they secure the recommendation of the instructor whose work they wish to take and the approval of the dean of the college concerned. They must give evidence that they possess the requisite information and ability to pursue profitably, as unclassified students, their chosen subjects, and they must meet the special requirements for the particular college in which they wish to enroll, as stated below.

An unclassified student is not matriculated and must pay a tuition fee of \$7.50 a semester in addition to the regular incidental fee.

No one may enroll as an unclassified student in any school or college of the University for more than two years, except by special permission, application for which must be made through the dean of the college.

A person registered as an unclassified student in one college and desiring to take a course in another college of the University must obtain the approval of the dean of the latter college.

For certain of its colleges the University has adopted special requirements for the admission of unclassified students. These are as follows:

College of Liberal Arts and Sciences.—A written application must be presented, accompanied by official certificates indicating the applicant's preparatory work and showing honorable dismissal from the school last attended. Such applications should be presented at least one week before the beginning of a semester.

College of Commerce and Business Administration.—A written application must be presented, accompanied by official certificates showing the character and extent of preparatory work accomplished and honorable dismissal from the school last attended. Statements from employers or official superiors may also be presented as collateral evidence of the candidate's qualifications. In order to secure action before the beginning of the semester or summer session, applications should be submitted one week before the date set for general registration.

College of Engineering.—The applicant must satisfy the regular entrance requirements in mathematics and English (algebra, $1\frac{1}{2}$ units; plane geometry, 1 unit; solid geometry, $\frac{1}{2}$ unit; English composition and literature, 3 units).

College of Agriculture.—In the case of men, two years of experience in practical agriculture are required. Any applicant accepted who is unable to satisfy the regular entrance requirements in English must carry English in the University until the deficiency is made good.

College of Law.—No credit earned by an unclassified student in the College of Law may be counted toward a degree in law.

Admission to Correspondence Courses

Correspondence courses are open to any applicants who can meet the University entrance requirements and also to persons eighteen or more years of age whose applications are approved by the Director of University Extension. For further information address the Director, 354 Administration Building (West), Urbana.

Admission to the Graduate School

Admission to the Graduate School may be granted to graduates of institutions whose requirements for the bachelor's degree are substantially equivalent to those of the University of Illinois. Admission may be to full graduate standing, to graduate standing with certain deficiencies to be removed, or, to special status without reference to a degree. There are special scholastic requirements for admission to graduate work in chemistry, chemical engineering, music, medicine, and dentistry. Admission to the Graduate School does not, however, imply admission to candidacy for a degree, and gives no right or claim to be so admitted. A mere accumulation of "credits" or "grades" is not sufficient. Application blanks for admission may be secured from the Registrar. Every applicant must submit with his application for admission an official transcript of his college record.

Admission to the Professional Schools

An undergraduate student in the Urbana departments of the University will not be permitted to transfer his registration to any of the professional schools of the University in Chicago while his record shows a deficiency in any of the subjects which, as general requirements of the University, are a part of his curriculum. A student who enters one of the professional schools at Urbana deficient in any general requirement of the University will be required immediately to register in the subject or subjects in which he is deficient and to continue such registration in successive semesters until the University requirement is met in full.

College of Education

Admission to the curriculum in Industrial Education of the College of Education is granted on admission to the University as a freshman. Candidates for admission to all other curricula of the College of Education must be able to matriculate in one of the undergraduate colleges and must offer, in addition, two years of undergraduate work, comprising not less than fifty-six semester hours of college credit exclusive of required courses in physical education and military science. Each applicant for admission to a curriculum other than Industrial Education, whether from the University

of Illinois or from another institution of recognized standing, must have attained grades of "C" or better in three-fourths of all undergraduate work (exclusive of required courses in physical education and military science) taken prior to the time admission is desired; provided, however, that in unusual cases deserving exceptional consideration applicants may be admitted on probation by consent of the Dean of the College of Education.

College of Law

Admission to the College of Law as a candidate for a degree in law is open to:

1. Graduates of the University of Illinois and of other colleges and universities of approved standing who have achieved a weighted grade average of at least 3.0, in terms of the grading system of the University of Illinois, in all work submitted for their degrees.

2. Students of senior standing in the University of Illinois and in other approved colleges and universities who have achieved a weighted grade average of at least 3.25.

School of Journalism

For admission to the School of Journalism as a candidate for a degree, a student must be able to matriculate in one of the undergraduate colleges of the University and must offer in addition, sixty semester hours of work with an average grade of "C" in one of the undergraduate curricula, exclusive of physical education and military science. A candidate who seeks admission from another institution must offer the same amount of work in an established curriculum of that institution. An applicant for admission will find it to his advantage to include in his pre-journalism curriculum at least six hours of rhetoric and composition, eight hours of history, political science, economics, and sociology, and ten hours of science (including mathematics).

Library School

Admission to the Library School is conditioned on the presentation of credentials showing that the applicant holds a bachelor's degree in arts or science from the University of Illinois or has had other equivalent training. Effective beginning in June, 1940, the scholastic average during the four years of undergraduate work must be at least 3.5, or its equivalent as determined by the University of Illinois for institutions using a different grading system. Application blanks for admission may be secured from the Director of the Library School, and these, filled out, should be filed, with documentary material showing qualifications for admission, not later than August 1. It is to the candidate's interest to present his application and certificates early, in order that the question of admission may be settled before he comes to Urbana. New students are not admitted at the beginning of the second semester. Persons over thirty-five years of age who have had little or no library experience are discouraged from applying, as are also individuals with serious physical defects or ill health. Admission to the graduate courses in library science, leading to the master's degree, is conditioned on the presentation of thirty hours credit in library science or its equivalent, and the approval of the Dean of the Graduate School.

ADMISSION TO THE COLLEGES IN CHICAGO

Applications

APPPLICATIONS for admission to any one of the three colleges, Dentistry, Medicine, or Pharmacy, must be made to the Examiner, 1853 West Polk Street, Chicago. Official credentials, covering all college and high school work done by the applicant, must be sent directly to the Examiner from each institution attended.

Physical Examination and Health Certificate

For each applicant for admission to any of the colleges at Chicago whose college record meets the requirements, the health officer at the last institution attended will be asked to furnish a certificate concerning the applicant's health, both physical and mental. Where the health service of an institution cannot supply the desired informa-

tion, the candidate, prior to admission and in addition to the required routine physical examination (see below), must secure a health certificate from the University Student Health Service. A student whose health record is not satisfactory will not be considered.

If a student's application is approved for admission at a date so late as to make it impossible to secure a health certificate before classes begin, he may, with the Dean's approval, be registered temporarily pending a satisfactory report from the Health Service.

The University Health Service also requires that each student placed on the first-year class list of the Colleges of Dentistry, Medicine or Pharmacy report for a physical examination prior to registration. A special fee of \$1.50 is assessed to cover the expense of making an x-ray chest plate as part of this examination. Appointments for this examination are ordinarily made throughout the month of September, prior to the opening of school. In the College of Medicine, students unable to show negative Shick and Dick reactions and recent successful smallpox vaccination must report for immunization before registration for the second year.

Each applicant is also urged to report to his family physician and dentist for a complete examination, including Shick and Dick reactions and smallpox vaccination. The applicant's eyes should also be examined and fitted with glasses if needed. A statement from the family physician regarding findings and immunization procedures should be forwarded to the Health Service of the University.

College of Dentistry

A minimum scholastic average in all college courses of 3. or its equivalent as determined by the University of Illinois for institutions using a different grading system is required of all applicants. In determining the scholastic average, grades received in military science, physical education, and hygiene will not be considered.

Candidates for admission who have attained scholastic averages of 3.5 or better will be given preference. In case there are more candidates so qualified than the College can accommodate, applicants will be ranked on the basis of pre-dental averages and those with the highest ranks will be given priority; with the general exception that all residents of Illinois who present 3.5 averages will be accepted before any non-residents.

Applicants with averages between 3. and 3.5 will also be ranked on the basis of scholarship and admitted (after all those with 3.5 averages or better have been enrolled) according to rank, with all qualified residents of Illinois accepted before non-residents.

Students who are of average age or younger are urged to complete more than the minimum pre-dental course requirements. At least three years in college is strongly recommended. The present trends in the profession emphasize the importance of a broad education.

For admission to the College of Dentistry, candidates must present satisfactory evidence of six years of work as follows:

(1) Four years of work in an accredited high school or the equivalent, comprising not fewer than fifteen units in acceptable subjects, including prescribed subjects as follows:

	UNITS
English.....	3
Algebra.....	1
Plane geometry.....	1
Laboratory science.....	1
Electives.....	9
Total.....	15

(2) Two years of work in an approved college of liberal arts and sciences, comprising not fewer than sixty semester hours, and including prescribed subjects as follows:

	HOURS
Chemistry (including four hours of organic chemistry).....	12
Physics.....	6
Biology.....	6
English.....	6
Electives (excluding military, hygiene, and physical education).....	30
Total.....	60

Since the number of first-year students is restricted by space limitations, candidates for admission should have their official credentials mailed to the Examiner of the Chicago Colleges as soon as possible. Each applicant is required to make a deposit of \$15.00 within two weeks of the date of notification that he will be admitted. This deposit is subject to regulations similar to those stated for the deposit in the College of Medicine (page 80).

College of Medicine

No student who is on scholastic probation at, or who has been dropped for poor scholarship from, the last institution attended prior to seeking admission to the University in its College of Medicine, will be considered for admission. The following requirements will go into full effect when the number of applicants who fulfill them equals the number who can be efficiently accommodated in the first-year class. However, preference will be given to students who comply with them, subject to the conditions mentioned below as to residence and students registered in the medical curriculum beginning with the pre-medical work at Urbana. The applicant must present satisfactory evidence of seven years of study as follows:

(1) Four years in an accredited high school or the equivalent, with not fewer than fifteen units of credit.

(2) Not less than eighty-eight semester hours in a recognized college or university, exclusive of military, hygiene, and physical education. Each applicant, whether from the University of Illinois or from another institution, must have attained a scholastic average of not less than 3.5, or its equivalent as determined by the University of Illinois for institutions using a different grading system.* In determining the scholastic average, grades received in military science, physical education, and hygiene will not be considered. The eighty-eight semester hours must include the following:

	HOURS
Chemistry (including, in addition to introductory courses, four hours of organic chemistry, three hours of quantitative analysis, and three hours of elementary physical chemistry), not less than.....	16
Physics (including laboratory work in mechanics, heat, sound, light, and electricity), not less than.....	8
Biology (including general and vertebrate zoology and general embryology), not less than.....	10
English, not less than.....	6
German or French (<i>see note 2, page 81</i>), not less than.....	6
Social sciences (including electives from at least two of the following fields: anthropology, economics, history, philosophy, political science, psychology, and sociology).....	14
Electives to make a total of.....	88

The Dean and the Registrar may waive full compliance with the course specifications if the applicant possesses unusually high qualifications.

No conditions are permitted.—The requirements for admission as stated above must be met in full before admission will be granted. No deficiencies are permitted.

Renewing applications.—An applicant who has been granted admission to the College of Medicine but fails to enroll, and who wishes to enter in a subsequent year, must re-apply for admission and must meet all the requirements in force at the time of such new application.

Procedure for students who have completed their pre-medical work at the University of Illinois.—The eight-year medical curriculum offered by the University consists of three years of pre-professional work at Urbana, including the subject requirements stated above, two years of pre-clinical work in the College of Medicine in Chicago (after this pre-clinical work a B.S. degree may be given), two years of clinical work in the College of Medicine (for the four years in the College of Medicine the student at his option may receive the degree of Bachelor of Medicine), and one year as an interne in a hospital approved by the University. The registration of students at Urbana who have completed the requirements of the first three years of the medical

*This rule is interpreted according to the number of passing grades. In a system of four passing grades, A, B, C, and D, the literal grades are translated into figures as follows: A = 5; B = 4; C = 3; D = 2; E (failure) = 1. Where there are more or less than four passing grades, the computation is adjusted to make the same level of accomplishment apply. The individual grades are multiplied by the respective number of semester hours which each represents, and the sum of these products is divided by the total number of semester hours taken. In the case of courses previously passed, both grades earned will be counted in computing the average.

curriculum (the pre-professional work) is continued in the College of Medicine, provided that at least the second and third years of the pre-professional work have been completed at Urbana. Registration of students entitled to continue in the College of Medicine is subject to the following conditions:

(1) The student who wishes thus to continue his work in the University must signify his intention to the Registrar, on a form provided by the Registrar, not later than March 1 of the year in which he proposes to continue his work in the College of Medicine in Chicago.

(2) The student must comply with the general regulations for registration in the University in the medical course. This includes the payment of a deposit of \$15.00 within two weeks of the date of notification that he will be admitted. Failure to pay this deposit within the specified time will subject the applicant to forfeiture of his place. If he enters, the deposit will be applied on the fees of the first semester.

(3) No student who is on probation in the University (or who has been dropped from the University for poor scholarship) at the time he seeks to continue his University registration in the College of Medicine, has any claim to precedence in registration over students who come with clear records from the University of Illinois or other institutions.

(4) No student at Urbana will be permitted to transfer his registration to the College of Medicine while his record shows a deficiency in any of the subjects which, as general requirements of the University, are a part of his curriculum.

(5) The registration of non-residents of Illinois can be continued in the College of Medicine only provided there is room after all properly qualified residents of the State have been accommodated.

Procedure for students who have completed their pre-medical work at institutions other than the University of Illinois.—The order of admission to the College of Medicine of students who have had their pre-medical work at other institutions shall be based upon their scholastic records; provided that the minimum scholastic average in all cases shall be equivalent to a 3.5 average in the University's grading system, as now required (see footnote page 79). The scholastic records of all such applicants shall be averaged on or about July 1 and the first-year class shall be filled by assigning to it applicants in the order of their scholastic standing, beginning with the highest ranking applicant; vacancies which may occur after all places in the class have been assigned may be filled from the remaining applicants in the order of their scholastic standing. Preference will be given to students who comply with the three-year requirements stated above.

Preference to Illinois residents.—In considering applications for admission to the College of Medicine, preference is given to candidates who are residents of Illinois. Places in the first-year class shall be assigned to applicants from Cook county and to applicants from Illinois outside of Cook county in the proportion which each area bears to the total population of the state according to the latest federal census; provided that if at any time the quota from either area is not filled the remaining places may be assigned to applicants from the other area. On this basis at the present time approximately fifty per cent of the places in the first-year class will be assigned to applicants from Cook County and fifty per cent to applicants who are residents of Illinois outside of Cook County.

Former two-year requirements.—If there are places in the first-year class of the College of Medicine after all properly qualified three-year candidates (see three-year requirements above) have been accommodated, such places will be filled by scholarship rank from candidates who meet the former two-year requirements, which are as follows:

(1) Four years of work in an accredited high school or the equivalent, comprising not fewer than fifteen units in acceptable subjects, including prescribed subjects as follows:

	UNITS
English.....	3
Algebra.....	1
Plane geometry.....	1
Latin, Greek, German, or French (both units in the same language)....	2
History and civics.....	1
Electives.....	7
Total.....	15

Each applicant, whether from the University of Illinois, or from other institutions of recognized standing, must have attained in his pre-medical work a scholastic average of not less than 3.5, or its equivalent as determined by the University of Illinois for institutions using a different grading system (see footnote page 79). In determining the scholastic average, grades received in military science, physical education, and hygiene will not be considered. The work must include prescribed and elective subjects as follows:

NOTE 1: ZOOLOGY.—Four of these eight semester hours must consist of laboratory work. This requirement must include a course in general zoology and one in vertebrate zoology. Botany is not accepted as meeting any part of the requirement.

NOTE 2: GERMAN, FRENCH.—The student is urged to secure a reading knowledge of one of these languages. This will ordinarily require at least six hours of work in the same language in college after two years in high school, or two full years of work (in a class reciting at least three periods a week) in college if the language was not begun in high school.

NOTE 3: ELECTIVES.—Psychology should be the first elective for pre-medical students and Mathematics the second elective. Other electives may be chosen from the following: Botany, Chemistry (physical, and quantitative analysis), Drawing, Economics, English, Greek, History, Latin, Logic, Political Science, Sociology, Zoology.

College of Pharmacy

For admission to the College of Pharmacy, candidates must present satisfactory evidence of five years of work as follows:

The Dean of the College and the Registrar may waive for one semester the requirement of algebra, provided that (a) the candidate's general scholastic average is at least 3.5 (see footnote page 79) or the equivalent, and (b) the candidate satisfactorily completes three semester hours of algebra in some recognized college or university during his first semester of residence in the College of Pharmacy.

The remaining hours are to be made up from electives, subject to the following restrictions: no work in chemistry in addition to the prescribed work may be elected; and no course in subjects offered in the College of Pharmacy (including botany, physiology, physics, and bacteriology) may be elected for admission, but such subjects may be offered for credit on the pharmacy curriculum. As desirable electives the following are recommended: accountancy, economics, history, trigonometry, and zoology.

Preference to Illinois residents.—In considering applications for admission to the College of Pharmacy, preference is given to candidates who are residents of Illinois.

GENERAL REQUIREMENTS FOR A BACHELOR'S DEGREE

A BACHELOR'S DEGREE is conferred on a student who satisfactorily completes a curriculum in one of the colleges or schools, doing either the first three years, or the last year, of work in residence at the University. Each candidate for a bachelor's degree must meet the general requirements of the University with respect to registration, residence, military science, hygiene, and physical education; must pass in the subjects marked prescribed in his curriculum; must conform to the directions of that curriculum in regard to electives and the total number of hours required for graduation; and must meet the minimum scholarship requirements which the University has approved for his college or school.

The system of grading is as follows: "A," excellent; "B," good; "C," fair; "D," poor (but passing); "E," failure. Examinations are conducted by the faculty at the end of each semester.

The required work includes, for men, military science and tactics, hygiene, and physical education; and for women, hygiene and physical education. All students entering the University as freshmen are required to obtain credit for four semesters of work in physical education and one semester in hygiene; those entering as sophomores, two semesters in physical education. Men in the freshman and sophomore classes, who are under twenty-two years of age when entering the University, are required to take military science and tactics unless exempted or excused by special regulations.

In any curriculum in which less than fifteen hours of laboratory science are required, a student who enters without at least one unit of laboratory science must substitute five hours of a laboratory science for five hours of electives in the requirements for graduation.

If a thesis is to be submitted in partial fulfillment of the requirements for a bachelor's degree, the subject must be announced by the first Monday in November, and the completed thesis on regulation paper must be presented to the dean of the proper college by June 1. The work must be done under the direction of a professor in the department concerned and must be in the line of the curriculum for which the degree is expected.

After matriculation, a student may count, toward his degree, as much as sixty semester hours of credit earned in correspondence study in subjects passed with grades of "C" or higher, under the following conditions: (1) if he completes all the remaining requirements for the degree in residence at the University; or (2) if he presents acceptable residence credit for work done elsewhere and completes the requirements needed for his degree in residence at the University. In all such cases the senior year (of not less than thirty semester hours) must be done in residence at the University.

A student who has earned three years of residence credit at the University may do his senior year in correspondence study, subject to meeting all the requirements for his degree as announced by his college or school.

Degrees are conferred at the annual Commencement exercises in June and at other times as follows: (1) Students who complete their work at the end of the first semester may, on application, be recommended at the February meeting of the Senate. (2) Students who are to complete their work for the bachelor's or the master's degree in the summer session, and who, in advance of the June meeting of the Senate, file a list of specified courses to be taken that session which complete the requirements in their cases, may be recommended at the June meeting, subject to the successful completion of the courses in the summer session. (3) Students who complete their work at the end of the summer session may, on application, be recommended at the October meeting of the Senate.

A student who has received one bachelor's degree may receive a second bachelor's degree, provided that all specified requirements for both degrees be fully met, and provided also that the curriculum offered for the second degree include at least thirty semester hours not counted for the first degree.

PROFICIENCY EXAMINATIONS

EACH SEMESTER the University gives proficiency examinations, similar to the regular semester examinations, in all courses normally open to freshmen and sophomores. Proficiency examinations in more advanced undergraduate subjects are given on recommendation of the head of the department and approval of the dean of the college. There is no fee charged for these examinations. A student who passes a proficiency examination is given credit toward graduation, provided that this does not duplicate credit counted for his admission to the University and that the course is acceptable in his curriculum. The grade in proficiency examinations is "pass" or "not pass," but no student is given a grade of "pass" unless he has made at least "C" in the examination. No official record is made of failures in these examinations.

Proficiency examinations are given under the following restrictions: (1) They may be taken only by persons who are in residence, or who are candidates for degrees at the close of the college year in which the examination is to be given and who need no more than ten semester hours to complete the requirements for their degrees. (2) They may not be taken by students who have received credit for more than one semester of work in the subject in advance of the course in which the examination is requested. (3) They may not be taken to raise grades or to remove failures in courses.

HONORS

STUDENTS who attain a high grade of scholarship are given official recognition by the University according to the following system of honors. The plan for Honors Day is applicable to undergraduates at Urbana who are enrolled in a four-year curriculum requiring only high school preparation for admission, or in the College of Education or School of Journalism.

Honors Day

An annual University Honors Day is held in accordance with the following plan:

On Honors Day there is a convocation with an address by some distinguished speaker.

Election of students to those honorary societies is announced where the basis of election meets a standard of scholarship approved by the Committee on Honors Day.

Announcement is made of those organized groups whose average is equivalent to 0.20 above the average of all undergraduates on the basis of the methods now employed by the University authorities in determining group averages.

Announcement is made of the names of undergraduate students who have distinguished themselves in scholarship during the two semesters previous to Honors Day; with the exception that in the case of freshmen the basis of award is the work of the first semester. There are three grades of such honors:

Class Honors.—Students in the upper ten per cent of each class within the respective schools or colleges are awarded Class Honors and are entitled to have their names printed on the Convocation program in recognition of their high scholarship, provided that no student shall be included whose average is below "B."

College Honors.—Students in the upper three per cent of the sophomore, junior, and senior classes within the respective schools and colleges are awarded College Honors in recognition of their superior scholarship and are entitled to wear the scholarship emblem.

University Honors (Bronze Tablet).—(a) Those seniors who have been in the upper three per cent of their class in the respective schools and colleges in the four semesters preceding Honors Day, and, therefore, have been awarded College Honors

in both junior and senior years, are awarded University Honors in recognition of their sustained excellence in scholarship, and are entitled to have their names inscribed on the Bronze Tablet. (b) Other senior students who have earned College Honors twice, and whose scholastic averages for the first seven semesters are equal to or higher than the four-semester average of the lowest student currently chosen for University Honors from their college, under (a), are also entitled to have their names inscribed on the Bronze Tablet. (c) Senior transfer students who have not been at Illinois long enough to be considered under (a) or (b) are also entitled to have their names inscribed on the Bronze Tablet, provided that: (1) their scholastic averages in the University of Illinois for the three prior semesters are equal to or higher than the four-semester average of the lowest student currently chosen for University Honors from their college under (a); and that (2) their averages in transferred credits for the year prior to their transfer are at least equal to the average of those chosen for University Honors under (a).

The basis of award is the attainments of the student or group of students as shown by the scholastic records on file in the office of the Registrar. The students and organizations to be given honors are selected by the University Senate through its Committee on Honors Day, and on the recommendation of the deans of the various colleges.

A student whose name is among the upper ten per cent of his class in accordance with the foregoing plan, at the convocation held in his junior year, is permitted so to adjust the studies of his senior year as to allow him freedom to put a considerable proportion of his time on some selected subject of study or investigation under the supervision of the department concerned, provided that such arrangement does not cause omission of prescribed subjects in set curricula except by special permission of the dean of his college. In lieu of a final examination the department may require such reports or thesis as it deems most suitable. The amount of approved work which may be thus taken during the senior year may not exceed the equivalent of a total of ten semester hours if taken within one department or of sixteen semester hours if in two departments. A student availing himself of the opportunity which this plan offers may not register for more than a total of eighteen hours either semester of his senior year.

Graduation with Honors

With the approval of the University Senate and the Board of Trustees, any college or school may prescribe the conditions under which candidates for degrees may be recommended for graduation with honors. When a proposal by a college or school has thus been approved the following plan of graduation with honors ceases to apply to that division of the University. (For graduation with honors from the College of Liberal Arts and Sciences, see page 110; the College of Agriculture, see page 149.)

The University Senate may recommend candidates for bachelors' degrees with honors in a particular field under the following conditions:

To be considered for honors, a student must have been in residence at the University for at least two years (four semesters) or have earned in residence at least sixty hours.

For the degree with *Honors*, the student must have received the grade of "A" in at least one-half of the semester hours accepted in satisfaction of the requirements for a major, or in a minimum of twelve hours in *approved courses* in his field of specialization, exclusive of beginning courses open to freshmen, and no grade below "C" in any of the work offered in his major or field of specialization. He must have attained a grade of not lower than "B" in at least three-fourths of all other work which he presents for graduation, exclusive of courses during his freshman year.

For the degree with *High Honors*, constituting a recognition of work of exceptional merit, the student must have received the grade of "A" in at least three-fourths of the work offered in courses accepted in satisfaction of the requirements for a major or in a minimum of fifteen hours in *approved courses in the field of specialization*, exclusive of beginning courses open only to freshmen, and no grade below "B" in the work offered in his major or field of specialization. He must also have attained a grade not lower than "B" in at least three-fourths of all the other work which he presents for graduation, exclusive of courses taken during his freshman year. In addition he must have completed satisfactorily at least ten hours in courses open to advanced undergraduates and graduate students, or courses approved for this purpose by the department in his field of specialization. He must either present an acceptable

thesis or pass a comprehensive examination based on a course of study approved by that department.

The thesis or course of study in the field of specialization shall carry credit for at least four semester hours, irrespective of whether the student eventually receives *High Honors* or not; and the instructor in charge shall report to the Registrar a grade for each semester, based on the student's progress.

These distinctions shall be noted on the student's baccalaureate diploma and in the Commencement program, and the winners shall receive special consideration in departmental recommendation for graduate scholarships and for professional positions.

Graduation with Honors in the Professional Schools

A student who complies with the requirements for graduation from the College of Law (degree of J.D. or LL.B.), the Library School, the College of Medicine, the College of Dentistry, or the College of Pharmacy, and who attains in all work done in courses offered in the college concerned, and presented for the degree, the average grade specified below, may be recommended by the University Senate for the honors stated: for an average grade of not less than 4.35 (an average of 4.6 to 4.8 in the Library School), *Graduation with Honors*; for an average grade of not less than 4.75 (an average of not less than 4.9 in the Library School), *Graduation with High Honors*. The honors conferred shall be noted on the student's diploma and in the Commencement program.

The essays may not be less than 3,000 nor more than 6,000 words in length, and they must be left at the office of the Department of Political Science not later than the second Wednesday in May. It is suggested that the essays be on some phase of American government and that contestants confer with the Department of Political Science as to the selection of a topic. The prize was offered in 1939-1940 and is ordinarily offered every second year.

Students are urged to call upon the executive secretary of the committee for advice and assistance in matters touching the policies and conduct of their various extracurricular activities. The committee's office is in 152 Administration Building, Office of the Dean of Men.

Practically every type of American college student organization is found among the several hundred clubs, societies, and associations represented on the University campus. There are sixty-one social and social-professional fraternities maintaining houses at the University, practically all of the leading fraternities being represented. There are twenty-seven social sororities and five cooperatively organized houses for women students.

Many independent men and women are organized into groups recognized by the University. Groups of five or more men with an approved housemother may organize in the Men's House Plan to promote fellowship, scholarship, improved living and study conditions, intramural sports, social recreation, and appreciation of moral and social

standards. Women students who are not members of sororities are organized under the Women's Group System, with forty-seven group organizations, and the Residence Hall government system, composed of five large residence units.

Associations

The *Alumni Association* is the general organization of the alumni of the University. Members pay \$3.00 a semester, or \$5.00 if the plan is chosen which includes payments to the physicians. The Dean of Men is the trustee of the fund.

The *Student Organizations Fund* affords centralization of accounts and funds of student organizations and activities. The Comptroller is treasurer of the fund, which is controlled by a student executive board, and the Dean of Men is Secretary.

The *Student Senate*, composed of twenty-four undergraduates, represents the entire student body in matters affecting student interest, promotes general student welfare, and exercises powers of student government conferred upon it by the Senate Committee on Student Affairs.

The *Interfraternity Council* and *Pan-Hellenic Council* are general representative bodies of Greek-letter social organizations. The *Men's Independent District Association*, the *Women's Group System*, and the *Residence Hall Government System* are designed to promote the interests of men and women not affiliated with fraternities and sororities.

Debating

The University engages yearly in from fifty to seventy-five intercollegiate debates, the teams for which are chosen in competitive preliminary inter-squad debates. In the Western Conference Debate League, consisting of the Universities of Chicago, Illinois, Indiana, Iowa, Michigan, Minnesota, Northwestern, Ohio State, Purdue, and Wisconsin, a rotating schedule is used for men's debates and is so arranged that each university debates with four other universities in a fall series and with all the other universities in a spring tournament. A forum program before some public audience is also participated in at the time of the spring tournament.

Many open-forum non-decision debates are held annually with the various state normal colleges and universities and teams from out of the state such as the University of California, University of West Virginia, Detroit University, Marquette University, Rollins College, and College of William and Mary. The University of Illinois, Northwestern University, and Purdue University in 1927 formed a debate league for women's teams. This is now affiliated with the Western Conference Debate League, and a rotating schedule including Illinois, Indiana, Iowa, Michigan, Minnesota, Northwestern, Ohio State, Purdue, and Wisconsin has been in effect since 1934. The women from all schools participate in a three-day discussion program in December and in a round of dual debates in March of each year.

International debates with British teams and reserve-squad debates with nearby colleges are scheduled from time to time.

A series of intramural debates is held during the second semester of each year. Participation in these contests is open to all undergraduates except members of the varsity intercollegiate debate teams.

STUDENT HOUSING

PROPER FOOD and lodgings are important determinants of success or failure in college. The University Division of Student Housing is continually working to improve standards of health, safety, comfort, moral surroundings, study conditions, social facilities, and reasonableness of charges in student homes.

Students reside in University and privately-operated residence halls, fraternities and sororities, cooperative houses, and private student homes under University supervision. Unmarried undergraduate students not residing with parents, guardian, or relatives, are required to live in places approved by the University.

The Division of Student Housing, 108 Student Center, Champaign, will send housing information on request. Rental of rooms by mail is not recommended; nor it is necessary to visit the campus far in advance of registration to secure lodgings. The Housing Division offers personal assistance to individual students in their housing problems.

Women's Residence Halls

The University operates three residence halls for women: the Mary E. Busey Hall, with accommodations for 156 women students; the Laura B. Evans Hall, with accommodations for 151; and the Davenport Residence Hall, with accommodations for 50. The rates include room, board, and laundry of sheets and pillow cases for first and second semesters. The halls are closed during the Christmas holiday recess, and this period is not included in the contract. Two halls are operated during the Summer Session. Graduates are permitted to reside in the halls during the Summer Session but not during the winter term.

Women students and their parents who desire information concerning these residence halls or other suitable homes should correspond with the Dean of Women. On request, the booklet of information and contract forms for the Women's Residence Halls will be sent. Room assignments are made in sequence to the three halls in order of date of application.

Men's Residence Halls

STUDENT EMPLOYMENT

AN EMPLOYMENT SERVICE is maintained by the office of the Dean of Men to advise and aid worthy students who desire to secure part-time employment during the college year. This service affords a central clearing point for the employment of both men and women students, with the exception of situations involving residence for women, which are usually referred to the office of the Dean of Women.

Students are not advised to attempt entire self-support. A student who plans to be partly self-supporting should have a thorough understanding of the financial obligations of a college course, and should have a reserve fund of at least \$250 at the opening of the academic year. Assignments of work are made on the basis of the actual needs of the students, of their ability to meet the requirements of the employers, and of any previous work record here at the University. The employment service cannot guarantee that work will be found for all needy applicants, although every effort is made to refer them to opportunities for employment. What they do with the opportunity depends entirely upon them.

An applicant for work should appear in person at the employment office which is located in the Student Center, on or before the regular days for registration. Jobs are not assigned in order of date of application.

No charge is made for this service.

STUDENT CONDUCT

THE UNIVERSITY reserves the right to exclude at any time students whose conduct is deemed undesirable or prejudicial to the University community's best interest, examples of which, without excluding others, are gambling, visiting or loitering in the vicinity of places of ill-repute, violations of law involving moral turpitude, intoxication, and disorderly conduct.

Motor Vehicle Operation

Operation or storage of motor vehicles by undergraduate students enrolled at Urbana is restricted by the University. Special permits to operate motor vehicles are granted to individual students for reasons of physical disability, distance of residence from the campus, and necessary employment. Requests for such permits should be addressed to the Senate Committee on Student Affairs, 108 Student Center, Champaign.

COLLEGES AND SCHOOLS AT URBANA

The College of Liberal Arts and Sciences

FOR THOSE WHOSE FIRST DESIRE IS LIBERAL EDUCATION, the College of Liberal Arts and Sciences offers a four-year general curriculum allowing a wide range of individual choice. The primary aim is a well-balanced personal development, with an understanding of the forces, tendencies, and conflicts of the present age in the light of the intellectual and cultural heritage of the past. Beginning with the freshman year, and comprising introductory courses in many departments, the general curriculum in this college affords avenues of approach to other colleges and schools of the University. It requires a nucleus of courses in literature or philosophy, social studies and natural sciences, a reading knowledge of at least one foreign language, and a certain amount of concentration in the subjects chosen as majors and minors. All students are encouraged to develop interests and talents supplementing their major subjects and to elect courses with cultural values, such as art, literature, music, and others listed as electives under the general curriculum (page 111).¹

Within the general curriculum, students planning for more advanced study after graduation, especially if they hope to engage in research, are encouraged to arrange their programs with reference to the requirements for admission to the Graduate School, and provision is made for those who wish to prepare themselves for various professions and vocations. Prospective teachers may specialize to some extent by choosing majors and minors in the subjects they wish to teach and by electing courses in the College of Education, to meet the requirements for teachers' certificates (page 163); or they may enter the College of Education for their junior and senior years in order to obtain a bachelor's degree from that college (page 160).

Library Science.—Students who are graduated from the College of Liberal Arts and Sciences, and are otherwise qualified, may enter the Library School for a year of special training in librarianship (page 187). An additional year of more advanced work, leading to a master's degree in library science, is available in the Graduate School. Freshmen and sophomores may elect a course in the use of the library and the ordinary reference books.

Law.—Students preparing for the study of law ordinarily encompass at least the first three years of the general curriculum in liberal arts and sciences before entering the College of Law. During their senior year they may, if scholastically qualified (page 178), elect courses equivalent to the first year of work in that college and thus complete the requirements for graduation from this college while making progress toward a degree in law. (For a similar plan combining commerce and law, see page 123.)

Journalism.—Students considering journalism as a profession are advised to pursue the general curriculum of liberal arts and sciences for two years, selecting fundamental courses in harmony with the requirements for admission

¹A new general curriculum will be inaugurated in September, 1940, as stated on pages 113 and 114. Statements on pages 107 and 108 concerning the present general curriculum as a preliminary to professional training are applicable to the new general curriculum so far as the same requirements can be fulfilled in both.

to the School of Journalism (page 181). In their freshman and sophomore years they may elect introductory courses in journalism, some of which are open also to students whose interest in journalism is incidental to other interests.

Home Economics.—Students desiring to specialize in home economics may make it their major subject in the general curriculum of this college (page 111) as an alternative to the more intensive curricula in home economics and in nutrition and dietetics (offered by the College of Agriculture, page 155) or in home economics education (offered by the College of Education, page 161). Certain courses in home economics (page 276) also may be taken as electives by students not specializing in that subject.

Chemistry and Chemical Engineering.—Chemistry may be taken as a major subject in the general curriculum (page 111), or as a minor subject, or as an elective independent of the major and minor subjects. For more specialized training, however, separate four-year curricula are offered in chemistry (page 115) and in chemical engineering (page 116), the latter requiring certain fundamental courses in several departments of the College of Engineering.

Social Administration.—A five-year program of training for administrative positions in various kinds of social service is offered. In the first four years, while meeting the requirements for a bachelor's degree in the general curriculum of this college, students obtain their pre-professional training for social administration (page 118). The fifth year consists of professional training and leads to the degree of Bachelor of Social Administration (page 120). An additional year in the Graduate School, leading to a master's degree, is planned for 1940-1941.

Medicine.—Students intending to study medicine may first complete the four-year general curriculum in liberal arts and sciences (page 111), with major and minor subjects chosen preferably from the physical and biological sciences, and thus have the benefit of a somewhat more liberal culture than is afforded by the minimum requirements for admission to the College of Medicine. Those who wish to enter the College of Medicine after only three years of undergraduate work may enroll, if scholastically qualified, in the pre-professional curriculum in medicine (page 117). On completion of the first year of work in the College of Medicine, such students may transfer their credit for that work to the College of Liberal Arts and Sciences so as to complete the requirements for a bachelor's degree from this college, thus saving a year in their progress toward a medical degree. To do this and gain priority rating (page 117), they should register as "pre-medical" when entering the University or as early as possible in their undergraduate years.

Dentistry.—The minimum requirements for admission to the College of Dentistry may be met by students who complete only two years of work identical to the first two years of the pre-medical curriculum (page 117). Students planning to study dentistry may register as "pre-dental" freshmen and sophomores, with special advisers, or may follow the general curriculum of liberal arts and sciences for more than two years in order to obtain not only the necessary basic courses in the natural sciences but also more cultural courses.

Pharmacy.—Admission to the College of Pharmacy requires only one year of work (page 118). Those who intend to study pharmacy may register as "pre-pharmacy" freshmen, with special advisers, or may continue for more than one year in the general curriculum before specializing.

Individual Curricula and Tutorial Work.—For superior students who have had at least one year of undergraduate work in residence at the University, individual curricula (below) may be arranged to serve other purposes than those accomplished by the conventional curricula described above. Opportunities for independent study under the guidance of faculty members, supplementing the regular classroom instruction, are available under the tutorial system described below.

Transfers.—Students transferring from other colleges are welcomed if they give satisfactory evidence of their ability to succeed in this college. Students in this college are free to transfer at any time to other colleges for which they are qualified, or from one curriculum to another within this college.

For admission, see page 68; for the buildings used by this college, see page 61; for museums and collections under its care, see page 65; for clubs and societies auxiliary to its curricula, see page 98; for prizes and awards, see page 85; for fees and expenses, see page 102; for general University requirements for a bachelor's degree, see page 82; for regulations concerning unclassified students, see page 75.

Departments and Divisions

To correlate the work of departments in the College of Liberal Arts and Sciences, the following groups are organized: (1) the *Division of Biological Sciences*, consisting of Bacteriology, Botany, Entomology, Physiology, Psychology, Zoology; (2) the *Division of Language and Literature*, consisting of the Classics, English (including rhetoric and speech), French, German, Spanish and Italian; (3) the *Division of Social Sciences*, consisting of Economics (a department in the College of Commerce), Geography, History, Philosophy, Political Science, Psychology, Sociology. Other departments in this college are: Astronomy, Chemistry (including chemical engineering), Geology (organized in one department with Geography), and Mathematics.

Graduate as well as undergraduate work is conducted in all departments of this college, and courses in all these departments (page 201) are taken by students enrolled in other colleges and schools of the University. The work of the faculty of this college thus serves all curricula that include the humanities, natural sciences, and social sciences.

In 1939, the Board of Trustees of the University, acting on a recommendation of the University Senate, authorized the organization of a general division in this college and the inauguration of a new general curriculum (page 113).

Personnel Bureau

To provide students with educational and vocational guidance, the College of Liberal Arts and Sciences maintains a Personnel Bureau. By means of scientific tests, conducted by staff members who are trained in psychological methods, an analysis is made of each student applying to the bureau for assistance. The results of this analysis are interpreted to the student in private interviews with counsellors, who are faculty members selected for service in the bureau because of their understanding of student life. All students eligible to enter any college or school of the University may avail themselves of the services of this bureau.

Individual Curricula

A limited number of sufficiently gifted and mature students, under the direction of the college committee on individual curricula, may make arrangements for individual curricula, the satisfactory completion of which will lead to the degree of Bachelor of Arts or Bachelor of Science. The main purpose of such individual curricula is to serve to the best possible advantage the needs of the superior student who can demonstrate his capacity to profit more from an individual program of studies than from any of the conventional programs. In general, the following regulations govern the operation of individual curricula:

(a) A student may make application for admission to an individual curriculum after the completion of at least 27 semester hours in residence at the University with an average of at least 4.0.

(b) The acceptance of a student for registration in an individual curriculum requires the approval of the college committee on individual curricula.

(c) Each candidate must meet the general University requirements with respect to registration, residence, fees, military science, and physical education, and must secure credit in approved courses totaling at least 120 semester hours.

(d) Having once been admitted to an individual curriculum, while registered therein, a student must maintain an academic point average of at least 3.5 or be transferred to the general curriculum. Such transfer may take place at the beginning of any semester. Under any circumstances, a student may withdraw from an individual curriculum for transfer to one of the established curricula and receive appropriate credit for the work done.

Tutorial Work

Under the tutorial system, students in the College of Liberal Arts and Sciences have opportunities for independent study and investigation. Before beginning tutorial work, a student must ordinarily have completed Groups A and B of the requirements for the general curriculum (page 111), have attained junior standing, with at least a 4.0 academic average in work taken at the University (exclusive of courses in military science, physical education, and hygiene), and have given promise of being able to do independent work in the proposed field of investigation. Applications are subject to approval by the department concerned, and by the college committee on tutorial work, and should ordinarily be filed before the close of the sophomore year. In the case of departments in which required sequential courses extend through the junior year, applications may be deferred until the beginning of the senior year.

Students whose applications are accepted will register for "Tutorial Work." Normally they may earn not more than 16 hours in any semester, of which not more than 12 hours shall be in formal class work. However, it is permissible to leave undetermined the number of hours credit in tutorial work until the close of the semester. In such cases, the amount of credit is determined by the college committee on tutorial work upon recommendation of the tutor and the department concerned.

Honors at Graduation

At graduation the honors awarded to superior students who do not elect tutorial work are designated as Honors, High Honors, and Highest Honors. They are awarded and graded according to the following rules:

(a) All candidates for honors must present an acceptable thesis or pass a comprehensive examination based on a course of study approved by the department of specialization or another competent body. The thesis course or special course of study must carry credit for not less than four semester hours.

(b) For the degree with Honors, the student must be recommended for Honors by his department of specialization, and have earned an average of 4.0 in all courses counted toward graduation from this college.

(c) For the degree with High Honors, a student must be recommended for High Honors by his department, and have earned an average of 4.25 in all courses counted toward graduation from this college. The thesis or comprehensive examination must give evidence of unusual ability.

(d) For the degree with Highest Honors, a student must be recommended for Highest Honors by his department, and have earned an average of 4.5 in all courses counted toward graduation from this college. The thesis or comprehensive examination must give evidence of exceptional ability.

For graduation with honors, the notation on the diploma reads: Honors in ———; High Honors in ———; Highest Honors in ———. (The name of the student's subject or subjects of specialization will ordinarily be added.) Such honors are recommended by the college committee on graduation honors.

Honors in Tutorial Work.—The honors to be awarded at graduation to superior students upon completion of their tutorial work are designated as Tutorial Honors, High Tutorial Honors, and Highest Tutorial Honors. They are awarded and graded solely on the basis of the general examination given at the close of the tutorial course. For graduation with honors in tutorial work, the notation on the diploma reads: Tutorial Honors in ———; High Tutorial Honors in ———; Highest Tutorial Honors in ———. (The name of the student's subject or subjects of specialization may be added.) Such honors are recommended by the committee on tutorial work.

GENERAL CURRICULUM

For the Degree of Bachelor of Arts (or Bachelor of Science)

Because of the wide range of choice open to individual students in the present general curriculum of liberal arts and sciences, it is not feasible to outline definite sequences of courses to be taken by all students in each of the four years of this curriculum as is done in the special curricula on following pages. Under the guidance of advisers, each student may plan his own program within the general requirements outlined below, which show the prescribed subjects, the required groups of subjects, the possible majors and minors, the minimum of advanced work, and the range of approved electives. This general outline indicates the ordinary procedure in fulfilling the requirements for the degree of Bachelor of Arts, or for the optional degree of Bachelor of Science.

Summary of Requirements for Graduation

Each candidate for a baccalaureate degree in the present general curriculum of liberal arts and sciences must meet the general university requirements with respect to registration, residence, fees, military science, and physical education; and must secure credit, with a satisfactory scholastic average, in approved courses totaling at least 120 semester hours, not counting credit earned for the required work in military science and physical education. In securing this credit, each candidate matriculating before June 1, 1939, must have grades of not less than "C" (3.) in subjects aggregating at least three-fourths of the semester hours required for the degree. Each candidate matriculating after June 1, 1939, must have an average of not less than "C" (3.) in all grades received, excluding those received in hygiene, military science, and physical education, and must not have grades below "C" in more than one-fourth of the total number of semester hours earned.

Optional Degree of Bachelor of Science.—The degree of Bachelor of Science, instead of the degree of Bachelor of Arts, is granted to students whose major is in mathematics, a science, or home economics, upon petition to the dean of this college not later than March 1 if the degree is to be received in June, or October 15 if in February.

A. Prescribed subjects:

To be begun in the first semester of the freshman year, except as otherwise provided, and to be continued until the requirements are completed.

1. *Hygiene.*—One semester. Credit may be obtained by a proficiency examination.
2. *Physical Education.*—Four semesters. Proficiency examinations are offered.
3. *Military Science and Tactics* (for men).—Four semesters. (See pages 196 and 298).
4. *Rhetoric.*—Two semesters. This requirement may be satisfied either by passing Rhetoric 1 and 2 or by passing proficiency examinations in these courses.
5. *Foreign Language.*—A reading knowledge of a foreign language (French, German, Greek, Italian, Latin, or Spanish) equivalent to that resulting from four semesters of study of a foreign language commenced in college. This requirement is satisfied by passing French 2b, German 5 or 6, Greek 4, Italian 2b, Latin 1a, Spanish 2b, or a more advanced course in any of these languages. Proficiency examinations are offered in all these courses as well as in the more elementary courses in languages. *Note:* No credit toward graduation is given for a beginning course in a foreign language unless it is continued through a full year. (Students planning to enter the Graduate School are advised to obtain a reading knowledge of both French and German.)

B. Group requirements:

To be begun in the freshman year and completed before the senior year. Proficiency examinations may be taken for credit in some of these subjects.

1. *Liberal Arts.*—A total of 15 hours chosen from at least three of the following subjects, including one course in English or foreign literature, or in the history of philosophy: English literature, foreign literature (based on the first two years of college work in the language chosen, or its equivalent), economics, history, philosophy, political science, and sociology.
2. *Sciences.*—A total of 15 hours chosen from at least three of the following subjects, including one course with a minimum of four hours laboratory work per week: astronomy, bacteriology, botany, chemistry, entomology, geography, geology, mathematics, physics, physiology, psychology, and zoology.

C. Majors, minors, and advanced courses:

1. *Major Subjects*.—Each student, before beginning the junior year, selects one subject and declares it to be his major. In order to be acceptable for graduation, a major must consist of at least 20 hours in courses chosen from those designated by a department and approved by the faculty of the college. Such courses are to be inclusive of some distinctly advanced work and exclusive of courses open to freshmen. At least five hours of the work acceptable for a major must be done in residence at the University. The subjects recognized as majors in this college are:

Bacteriology	Entomology	History	Physiology
Botany	French	Home Economics	Political Science
Chemistry	Geography	Latin	Psychology
Classics	Geology	Mathematics	Sociology
Economics	German	Philosophy	Spanish
English	Greek	Physics	Speech
			Zoology

2. *Minor Subjects*.—Each candidate for graduation must offer, in addition to his major, a minor consisting of 20 hours in one or two subjects designated by the department in which he is taking his major, and approved by the faculty, with not less than 8 hours in each subject if two are chosen.
3. *Advanced Courses*.—Thirty hours of the work taken in the junior and senior years must be in courses not open ordinarily to freshmen or sophomores. Students should plan their first and second years of work so as to include the prerequisites for advanced courses.

D. Electives:

1. *Liberal Arts and Sciences*.—Any course offered in the College of Liberal Arts and Sciences may be used as an elective.
2. *Other Colleges*.—Electives totaling as much as (but not more than) 32 hours may be taken in other colleges and schools of the University and counted toward graduation from this college, in addition to the courses acceptable for major and minor requirements, if such electives are in conformity to the following list approved by the faculty:

Accountancy.—A total of 6 hours (not including more than one of the following courses: Accountancy 1a, 1e, 12).

Agricultural Economics.—A total of 6 hours.

Landscape Architecture.—A total of 7 hours.

Graduate Courses.—A student of excellent standing who is within five semester hours of his bachelor's degree may be given the privilege of electing courses in the Graduate School with the consent of the dean of that school. Such a student will register both in the College of Liberal Arts and Sciences and in the Graduate School.

Law.—A student of senior standing with an average of 3.25 who has been in residence either the first two years or the last year of his pre-legal work may take and count toward the A.B. degree not to exceed 32 hours in the College of Law, provided that not less than two courses amounting to at least 5 hours per semester are taken, with the advice of the dean of the College of Law, and provided further that if any such student desires to take more than 6 hours of law work he must also register in the College of Law.

Military Science.—A total of 6 hours in advanced courses.

Music.—A total of 15 hours approved by the director of the School of Music.

Physics.—All courses.

NEW GENERAL CURRICULUM

Beginning in September, 1940, the University of Illinois will offer in the College of Liberal Arts and Sciences a new general curriculum for a limited number of students. In the freshman and sophomore years of this new program, students will be introduced to several fields of learning, by means of general courses intended to develop wider views of human experience and endeavor. In the junior and senior years, each student continuing in this curriculum will organize his work about a field of concentration. The degree of Bachelor of Arts will be conferred on those who complete this program.

The requirements for admission will be the same as for the present general curriculum in the College of Liberal Arts and Sciences (page 72), but only 250 new students can be accommodated in the new general curriculum during 1940-1941.

General Courses

The work of the new curriculum will be based on seven general courses, one in each of the following fields: (1) verbal expression, (2) history of civilization, (3) biological science, (4) physical science, (5) social science, (6) literature and the fine arts, (7) philosophy and psychology.

The contents of the courses in these fields will consist of subject matter from related groups of departments of the University, and will be organized according to the nature of each field and the educational needs of students. Each course will extend through the two semesters of the school year and give eight semester-hours of credit toward graduation.

In all these courses the general purpose will be the introduction of the students to the points of view and methods of exploration characteristic of each field, to discover and make use of its resources for individual and social living. As a group, these courses are planned to supplement and support one another. The emphasis throughout will be on continuous growth and integration.

Only the first three of these seven courses will begin in September, 1940; the other four will begin in September, 1941. To facilitate the development of the program, the General Division of the College of Liberal Arts and Sciences has been established as authorized by the Board of Trustees of the University.

All members of the teaching faculty who will conduct these courses are of the rank of instructor or above. Each discussion class will be limited to twenty students, so that each student can receive individual instruction and participate in the general exchange of views within the class as a group.

Freshman-Sophomore Program

Each student enrolled in this new curriculum will normally complete the first three of these general courses in his freshman year and three more of them in his sophomore year. At least six of the seven, including the first four of them as listed above, should ordinarily be completed by the end of the sophomore year, and must be completed by the end of the junior year, if the student is to continue in this curriculum.

At the end of each year, a general examination will be set by the instructors in each course, with the help of an examining committee. Proficiency examinations will be given at stated intervals.

Ordinarily the work of the first two years will proceed as follows:

In the third year, students with a satisfactory record may begin the junior-senior program of this curriculum, or may transfer to the present general curriculum of this college, or may enter the College of Education or the School of Journalism. At the end of the third year in this curriculum, students may qualify for admission to the College of Law on the same terms as those who are in the present general curriculum, and so may obtain after three more years of study (six years in all) the degree of Bachelor of Laws in addition to the degree of Bachelor of Arts.

Junior-Senior Program

The work of the third and fourth years in this new general curriculum will be composed chiefly of departmental courses. Each student, at the beginning of his junior year, will select one of the four fields of concentration listed below, as a center for a program of study which he will arrange, subject to approval by the college committee in charge of the curriculum. This program must include at least 32 semester-hours in the chosen field, with a minimum of 15 hours in one department. When approved, such a program will be regarded as a required program, which the student may not change without the approval of the committee.

The four fields of concentration, with the subjects in which courses may be counted toward the required 32 hours in each field, are as follows:

(1) Mathematics and physical science.—Courses in the departments of mathematics, astronomy, chemistry, geography, geology, physics.

(2) Biological science.—Courses in the departments of bacteriology, botany, entomology, physiology, psychology, zoology.

(3) Social science.—Courses in the departments of economics, geography, history, philosophy, political science, psychology, sociology.

(4) Humanities.—Courses in the departments of art, history, philosophy; and courses in literature in the departments of Classics, English, German, French, Spanish and Italian.

Summary of Requirements for Graduation

To be eligible for graduation with the degree of Bachelor of Arts from the new general curriculum of this college, a student must (1) meet the general University requirements with respect to registration, residence, scholarship, military science, physical education, and fees; (2) meet the foreign language requirements of the present general curriculum of this college; (3) complete six of the seven general courses, including those in verbal expression, history of civilization, biological science, and physical science; (4) complete a junior-senior program, approved by the committee in charge of this curriculum, including 32 hours of credit in a field of concentration, with at least 15 hours in one department; and (5) have a minimum total of 120 hours of credit, not counting the required work in physical education and military science.

Enrollment

As only 250 freshmen can be admitted to this new curriculum in September, 1940, prospective students who are interested in this program should write as soon as possible to Professor Sidney E. Glenn, general counselor for the curriculum, Room 121, Lincoln Hall, University of Illinois, Urbana, Illinois.

CHEMISTRY AND CHEMICAL ENGINEERING

The following curricula in chemistry and chemical engineering afford more specialized training than is required of students who make chemistry their major subject in the general curriculum of liberal arts and sciences (page 111).

The minimum language requirement for graduation in these curricula is the equivalent of two years of college work in German or French. When a student does not offer either German or French for entrance, the second year of the language required for graduation may be counted as an elective in either curriculum. Students entering with two units of credit for German or French (two units in high school being equivalent to one year in college) should complete this minimum requirement in their freshman year. Those entering with less than two units in German or French should complete this requirement in their sophomore year or as early as possible.

At the end of each semester, when the scholastic averages of all students are computed, any student whose grade-point average is less than 3.5 in chemistry courses—or in all subjects exclusive of the required military, physical education, and hygiene—is denied further registration in chemistry courses other than Chemistry 1, 2, 3, 4, 5, 6, 7a, 8a, 8b, until such a time as the student may have improved his average to this minimum. Students transferring from other colleges or universities must have a corresponding average in order to be admitted to these curricula and must maintain such an average in order to continue.

MEDICINE, DENTISTRY, AND PHARMACY

The College of Liberal Arts and Sciences prepares students for admission to the Colleges of Medicine, Dentistry, and Pharmacy, which are maintained in Chicago by the University of Illinois, and to other colleges and schools which offer professional training in these lines.

The three-year pre-medical curriculum outlined below includes the courses required for admission to the College of Medicine under the regulations governing students enrolled at Urbana for this purpose.

The work covered by the first two years of the pre-medical curriculum enables students to meet the requirements for admission to the College of Dentistry. Those who take these two years of work for that purpose should register as "pre-dental" students.

A slightly different arrangement of courses, as outlined in the pre-professional curriculum in pharmacy, is intended for students who wish to enter the College of Pharmacy at the beginning of their sophomore year. They should register as "pre-pharmacy" freshmen.

Pre-professional Curriculum in Medicine

This curriculum, which combines three years of work in the College of Liberal Arts and Sciences with one year of work in the College of Medicine, is available to students under the following conditions:

Any freshman whose scholarship rank is in the upper half of his high school graduating class, on matriculating in the College of Liberal Arts and Sciences, is eligible for admission to the pre-medical curriculum.

A student transferring to this college with advanced standing must have maintained at least a 3.5 scholastic average, in terms of the University's grading system, in order to be admitted to the pre-medical curriculum.

In June of each year the scholastic averages of all students enrolled in the pre-medical curriculum are computed. Students whose scholastic average at the time of computation is below the 3.5 average required for admission to the College of Medicine are denied further registration in this curriculum, until such a time as they may have improved their average to this minimum.

In order to gain priority rating for admission to the College of Medicine, a student in this curriculum must complete at least the second and third pre-medical years in the College of Liberal Arts and Sciences.

Students who complete three years of the pre-medical curriculum and the first year in the College of Medicine receive the degree of Bachelor of Science from the College of Liberal Arts and Sciences. No student may receive credit toward this degree for more than thirty hours of work done in any other college or university, since the prescribed subjects are fully equivalent to the usual college major, students in this curriculum are not required to make formal declaration of a major.

A bachelor's degree may be granted to any student registered in the pre-medical curriculum who completes the regular requirements of the general curriculum in liberal arts and sciences (page 111). A student who wishes to obtain a bachelor's degree before entering the College of Medicine should declare his major at the beginning of his junior year.

SOCIAL ADMINISTRATION

The following five-year program permits students early in their college careers to direct their studies toward administration of social service: assistance for dependent and delinquent children; security for the aged and infirm; training for the blind and for others with physical handicaps; care of the insane and others mentally subnormal; management of prisons and rehabilitation programs; operation of agencies

¹Electives in the second and third years should be arranged to satisfy the requirements for admission to the medical school which the student expects to enter. The College of Medicine of the University of Illinois requires fourteen semester hours from at least two of the following: economics, history, philosophy, political science, psychology, sociology.

²Two years of college work in German or French are required of students who have less than two units of entrance credit for one of these languages in high school.

³Students having credit for chemistry in high school will register for Chemistry 2 (three hours).

⁴Students having credit for advanced algebra in high school will register for Mathematics 2 (three hours). Those having only two units of mathematics in high school may register for Mathematics 4a (three hours) in the second semester.

⁵Hygiene, which is required of all freshmen, may be taken in either the first or second semester.

⁶The following are recommended as desirable electives: accountancy, economics, history, trigonometry (if not taken in high school), and zoology. No courses in bacteriology, botany, physics, or physiology may be counted for admission to the College of Pharmacy.

for public employment, emergency relief, and industrial insurance. This curriculum is designed to meet the requirements of the American Association of Schools of Social Work.

Pre-professional Curriculum in Social Administration

For the Degree of Bachelor of Arts

The regular requirements for graduation from the College of Liberal Arts and Sciences with the degree of Bachelor of Arts apply to students in this curriculum. Each student is required to take at least one basic course in each of the following subjects: economics, history, political science, psychology, and sociology. One of these should usually be chosen as a major. Minors may be chosen from these subjects or from home economics, law, and philosophy. Regulations of the department in which the major is chosen will govern the selection of courses for major and minor credit. It is recommended that the natural science requirements be met from courses in bacteriology, chemistry, physiology, psychology, and zoology, one course in heredity being included. For other group requirements and prescribed subjects, see page 111.

The following provisional outline of courses indicates the general character of the pre-professional curriculum. To some extent the courses taken by each student will be governed by his choice of major and minor subjects. Electives may be used for major requirements, for specialization, or for deficiencies in foreign language. Courses marked with the asterisk (*) are of basic importance to the curriculum, and a total of at least 24 semester hours in such courses is required.

Professional Curriculum in Social Administration

For the Degree of Bachelor of Social Administration

Students who have completed the four-year pre-professional curriculum in social administration (page 119), or its equivalent, may enroll for a fifth year of work leading to the degree of Bachelor of Social Administration. The minimum requirement in this additional year is 30 semester hours, six of which must be in supervised field work with approved agencies where the University maintains regular field work centers. A minimum of 480 clock hours of such field work is required.

A student who has credit for any of the courses in the following list or their equivalent may substitute other advanced courses approved by the adviser.

Those who complete this professional curriculum and are otherwise qualified may enter the Graduate School as candidates for the degree of Master of Science in Social Administration.

The College of Commerce and Business Administration

THROUGH KNOWLEDGE OF MODERN BUSINESS PRACTICES and the fundamental principles on which economic systems operate, the College of Commerce and Business Administration seeks to develop in students the intellectual powers necessary for administrative careers. For this purpose it offers a unified program of basic studies for underclassmen and a variety of fields of concentration for upperclassmen. Though the factual contents of many of the courses are directly useful in specific vocations—accounting, banking, selling, teaching, etc.—students should expect to serve an apprenticeship in the fields they enter after graduation from this college, if they wish to prepare themselves for higher positions. While concentrating in a special field, they are encouraged to elect courses offered in other colleges and schools of the University and to secure as liberal an education as possible, to avoid the narrowing effects of early specialization.

The program of the first two years, the *Lower Division*, is organized about a nucleus of courses in accountancy and economics, mathematics and science, language and literature, rhetoric and speech. While it is designed primarily as preparation for the third and fourth years of the curriculum, it affords a well-balanced combination of studies to those who are in college for only two years of preparation for work in the business world. Students who have completed this two-year program with a satisfactory scholastic record are qualified for admission to the *Upper Division* of the College of Commerce and Business Administration or for admission to the College of Education (page 159) or the School of Journalism (page 181).

The program of the next two years, the *Upper Division*, provides nine fields of concentration, each student choosing the field he prefers: (1) accountancy, (2) banking and finance, (3) commerce and law, (4) commercial teaching, (5) economics, (6) industrial administration, (7) management, (8) marketing, (9) public affairs. These fields overlap to some extent in that they deal with the common problems of living and working in a business environment, and they are distinguished chiefly by their separate points of view and by the ultimate objectives of those who elect these fields. The program leads to the degree of Bachelor of Science in the field chosen.

To succeed in any field of this program, a student should be well prepared in the basic work of the Lower Division or have equivalent training elsewhere. To be admitted to the Upper Division, each student must have at least 60 hours of credit, including the courses prescribed in the Lower Division, with a scholastic record of not more than 15 hours below "C." Students transferring from other colleges and universities are given full opportunity to make up any Lower Division courses in which they may be deficient, without delay in their progress toward a degree.

Students in this college who intend to enter the Graduate School (page 189) are advised to arrange their programs so as to include the courses that are prerequisite for graduate work and to acquire a reading knowledge of French and German. A course of study which is substantially equivalent to a fifth year of work in the departments of this college, and which leads to the degree of Master of Business Administration, is available in the Graduate School as stated on page 218.

Departments and Divisions

Instruction in this college is organized in two departments: (1) the Department of Business Organization and Operation, which is subdivided into the division of business organization and operation, the division of accountancy, and the division of business law; and (2) the Department of Economics.

The division of business organization and operation conducts courses in the organization and management of manufacturing industries, distributing agencies, and merchandising enterprises, the principles and methods of advertising, marketing, purchasing, and selling, as listed on pages 221-222.

The division of accountancy conducts courses in general principles of accounting, auditing, cost accounting, income tax procedure, governmental accounting, budget control, and accounting systems, as listed on pages 219-221.

The division of business law conducts four courses dealing with phases of law closely allied to business, such as contracts, agency, and other subjects listed on page 222.

The Department of Economics offers courses in economic history and theory, domestic and foreign commerce, banking and finance, public utilities and transportation, personnel administration, insurance, and statistical methods, as listed on pages 241-246. In this department a professorship in the economics of public utilities and transportation is maintained by an endowment from the late Honorable William B. McKinley, United States Senator from Illinois. This department cooperates with others in the Division of Social Studies in the College of Liberal Arts and Sciences, and students in that college may make economics their major subject (page 112).

Many of the courses offered in the College of Commerce are open to students in other undergraduate colleges and schools of the University, and to graduate students.

For the *Bureau of Business Research*, which is administered as a department of this college, see page 405. For *special conferences and short-courses* sponsored by this college, see page 393.

For *admission*, see page 68; for regulations concerning *unclassified students*, see page 75; for general university requirements for a *bachelor's degree*, see page 82; for *prizes and awards*, see page 85; for *clubs and societies*, see page 98; for *fees and expenses*, see page 102.

Requirements for Graduation*

For the Degree of Bachelor of Science

A candidate for the degree of Bachelor of Science in a field of the College of Commerce and Business Administration must (1) meet the general university requirements with respect to registration, residence, scholarship, and fees; (2) have a minimum of 130 semester hours of credit, including credit for the required work in rhetoric, hygiene, physical education, and military science, and including a minimum of 60 hours in courses given in this college (except that in the field of commerce and law this shall be 45 hours); and (3) complete the requirements of one of the fields of concentration described below, with an average grade of not less than "C" in the courses taken while registered in a field of concentration.

The College of Engineering

ENGINEERING AS A LIFE WORK REQUIRES PREPARATION IN the mathematical and physical sciences and their applications to the design, construction, and operation of industrial plants and public works of every kind. In addition to specialized techniques for the production and use of tools and machines, men in responsible positions as engineers need an appreciation of economic factors in industrial enterprises, an insight into complex regional and national problems of communication, transportation, and the distribution of electric and other forms of power, and an understanding of human relationships. University training of engineers, therefore, includes the cultivation of broad interests as well as concentration in special fields.

To extend the intellectual horizons of students entering the College of Engineering, and to present wide views of the branches of engineering as a profession, orientation lectures are scheduled weekly through the first year. Work in the classrooms, libraries, laboratories, shops, and drafting rooms is correlated by application to practical problems, which the students are required to solve by methods similar to those of practicing engineers. The program of the first year in all curricula of this college includes basic courses in mathematics, chemistry, drawing, and rhetoric. While the program for the other years is progressively more specialized, with the aim of preparing each student adequately for work as an engineer and for entrance into his chosen field of industry or public works, all students elect some courses outside their special fields and are encouraged to read widely. The Engineering Library, on the first and second floors of Engineering Hall, contains the reference books, periodicals, catalogs, and technical publications which the students need constantly, and also provides for general reading and private research. Besides courses in the history and economics of industry, industrial relations, and business law—which are essential to the engineer—numerous courses in accountancy, business organization and operation, liberal arts and sciences, theory and appreciation of architecture, art, and music, and the history, principles, and methods of education, are available as non-technical electives to be counted toward graduation.

Most of the departments in this college offer courses for graduate students as well as for undergraduates (see page 201). Some of the undergraduate courses may be taken for credit in the Graduate School.

For *admission* see page 68; for regulations concerning *unclassified students*, see page 75; for a list of the *buildings* used by this college, see page 62; for *collections* related to it, see page 67; for *clubs and societies* auxiliary to its curricula, see page 98; for *fees and expenses*, see page 102; for *prizes and awards*, see page 85; for general University requirements for a *bachelor's degree*, see page 82; for *professional degrees in engineering*, see page 191; for *special conferences and short-courses*, see page 394; for the *Engineering Experiment Station*, see page 401.

Curricula in Engineering

The four-year curricula for students of engineering (as described and outlined on following pages) are:

Agricultural engineering, administered by the College of Engineering with the College of Agriculture cooperating.

Ceramic engineering and *ceramics*, administered by the Department of Ceramics.

Chemical engineering, administered by the College of Liberal Arts and Sciences (page 116).

Civil engineering, administered by the Department of Civil Engineering.

Electrical engineering, administered by the Department of Electrical Engineering.

Engineering physics, administered by the Department of Physics.

General engineering, administered by the College of Engineering.

Mechanical engineering, administered by the Department of Mechanical Engineering.

Metallurgical engineering and mining engineering, administered by the Department of Mining and Metallurgical Engineering.

Railway civil engineering, railway electrical engineering, and railway mechanical engineering, administered by the Department of Railway Engineering.

In addition to the departments named above, the College of Engineering includes the Department of General Engineering Drawing and the Department of Theoretical and Applied Mechanics, which offer no special curricula but conduct courses for students in all curricula.

Dual Curricula.—Students of high scholastic achievement, with exceptional aptitudes and interests in special fields of engineering science and its application, may be permitted to vary the course content of the standard curriculum of the department in which they are registered, with the purpose of emphasizing some phases of the general area of knowledge which are not included in the standard curriculum or which can not be encompassed by the usual procedure of course substitution and selection of electives. These unwritten curricula, however, include all of the fundamental underlying courses of the standard curricula, the variations being made mainly in the so-called "applicatory" portions of the standard curricula of the college. The program of studies of each student permitted to take such a dual curriculum must be approved by a committee of the college, of which the associate dean is chairman, in consultation with the head of the department in which the student is registered and with a professor of the college particularly interested in the field which the student intends to emphasize. This professor automatically becomes the student's adviser in charge of registration and other matters pertaining to the proper carrying out of the approved program.

Each student entering the College of Engineering declares his choice of a curriculum. Except where stated in the outline of a curriculum, such as ceramics, all freshmen register for a similar program (page 131).

At the beginning of any semester of the first two years, any student is free to change from one curriculum to another without loss of much, if any, credit for the work he has done. Students who are not far advanced in this college may transfer to other colleges without much loss of time in their progress toward degrees.

Degrees

Students in the College of Engineering who meet the University's general requirements with respect to registration, residence, and fees, and who maintain satisfactory scholastic records in this college, are awarded degrees appropriate to their curricula. Each curriculum requires a minimum of 136 semester hours of credit, not counting the required work in military science and physical education.

Each curriculum leads to the degree of Bachelor of Science and may ordinarily be completed in four years. A graduate of one curriculum ordinarily can qualify for another baccalaureate degree by doing a fifth year of work, consisting of 30-36 semester hours, acceptable to the faculty of this college, providing plans have been made looking toward such an arrangement at the beginning of his junior year.

A graduate of the College of Liberal Arts and Sciences, or any other college of equal standing, who has adequate training in mathematics, physics, and mechanics to enable him to begin the junior year of a curriculum in the College of Engineering, can usually qualify for the degree of Bachelor of Science from this college by two years of work.

Special Requirements

All freshmen in the College of Engineering are required to attend the series of lectures on general engineering subjects, which are scheduled each week throughout the academic year.

Rhetoric 1 and 2 are prerequisite to junior standing in the College of Engineering. Students without credit in these courses are not permitted to register for more than eight hours of prescribed junior work without being registered in Rhetoric 1 or 2.

Foreign Language.—In any curriculum requiring French or German, a student who has been admitted to the University with credit for one or more years of secondary

school work in either or both of these languages may count each unit of his entrance credit as equivalent to one semester of university work in excusing him from the required language. Only whole units may be so counted. In the place of the language requirement thus fulfilled, the student must take additional electives approved by the faculty of this college.

Inspection Trips.—Seniors in the College of Engineering are required to make a trip for inspection of industrial establishments and engineering enterprises, in the fields of their major interests. The students who are about to be graduated, and other students who obtain permission of the general committee in charge of this trip, travel in groups, under the supervision of faculty members. The trip usually occupies from three to four days and involves an expense of approximately \$20 to each student.

Thesis.—A senior of high standing in any curriculum, with the approval of the department concerned, may substitute for one or more technical courses an investigation of a special subject and write a thesis on his results.

Electives and Options

Non-technical electives for students in the College of Engineering include all courses offered in the College of Liberal Arts and Sciences and in the College of Commerce, the general courses in the College of Education, courses numbered 1 to 14 in the School of Music, Architecture 11 and 12, Landscape Architecture 11, and the four courses in Engineering numbered 10, 20, 39, and 92. Field survey courses may be used in place of the non-technical and approved electives in any curriculum. Students electing the third and fourth years of military science may count the credit they receive in place of some other electives.

Technical electives include all courses in the College of Engineering not required in the student's curriculum, excepting General Engineering Drawing 1, 2, 4, 6, 7, and 8, and Engineering 10, 20, 39, and 92.

Approved electives include all technical and non-technical electives as defined above and other courses specifically designated as approved electives in the outlines of the curricula.

Technical options are restricted to courses of a technical character as listed under this classification by each department.

Departments and Equipment

The College of Engineering includes, besides the departments named in the following paragraphs, the Department of General Engineering Drawing, with offices and drafting rooms in the Transportation Building, in which courses for students in all curricula are conducted. For convenience, these paragraphs also mention the work in chemical engineering, which is administered by the College of Liberal Arts and Sciences.

Agricultural Engineering.—The curriculum in agricultural engineering, with an option in machinery and power, and another option in construction and drainage, includes fundamental courses in the College of Engineering and in the College of Agriculture (page 147).

Ceramic Engineering.—As a whole, the courses in the Department of Ceramic Engineering deal with the general scientific principles underlying the silicate industries, which include the manufacture of glass, vitreous enamels, cements, brick, tile, and other clay products. A student concentrating his college work in this department has a choice of two curricula, which have much in common. If his objective is the designing of plants and equipment, the construction of kilns and driers, and the supervision of manufacturing operations, he should follow the curriculum in ceramic engineering, in which engineering subjects predominate. The administration option, beginning in the third year of this curriculum, offers training in industrial organization and management. If he intends to become a ceramic technologist in charge of a laboratory for the control of processes, for testing and investigations, and for research, or if he wishes to become a teacher of ceramics in a secondary school, he should follow the curriculum in ceramics, which permits more specialization.

The laboratories, drafting rooms, classrooms, and offices of this department are in the Ceramics Building, which has a kiln laboratory adjoining it. These are equipped

with the apparatus usually required for the grinding and pulverizing of materials, for the study of physical and chemical properties, and for the testing of pottery, glasses, glazes, and enamels.

Chemical Engineering.—The courses in chemical engineering, which are conducted by the Department of Chemistry in the College of Liberal Arts and Sciences, prepare students to evaluate results obtained in the laboratory and to translate them, through a series of developmental stages, into commercial large-scale processes; to improve existing plants; to develop new commercial products; to design new equipment; and to operate and supervise plants in which chemical processes take place. The curriculum offers a thorough training in the fundamental sciences of chemistry, mathematics, and physics, and their application to industry in a wide variety of fields.

The chemical engineering laboratories are in the William Albert Noyes Laboratory of Chemistry and in several smaller buildings constructed for special investigations. The equipment in these laboratories is extensive, and in addition other equipment of the Department of Chemistry is available for use of students in the curriculum in chemical engineering.

Civil Engineering.—The curriculum in civil engineering offers a systematic training in the principles underlying the design and construction of bridges, buildings, dams, retaining walls, and other structures; highways; water supply and sewage disposal systems; hydraulic engineering works, etc. Opportunity is offered in the senior year for a certain amount of specialization in some of the more important branches of civil engineering by the options in structural engineering, highway engineering, hydraulic engineering, and sanitary engineering.

Engineering Hall provides ample space for the departmental offices, classrooms, and the senior and junior drafting rooms. An individual desk, available at all times, is provided for each student. In the corridors of this building there is a comprehensive exhibit of large pictures illustrating outstanding civil engineering works.

The Surveying Building contains recitation and drafting rooms and is located close to the surveying practice fields.

The Arthur Newell Talbot Laboratory houses laboratories of the Departments of Civil Engineering and Theoretical and Applied Mechanics. The concrete laboratory is provided with the facilities necessary for the study of the proportioning and mixing of concrete and of its physical properties. The highway laboratories are equipped for tests on bituminous and non-bituminous highway materials. The structural laboratory has testing machines varying in capacity from thirty thousand pounds to three million pounds and all of the necessary instruments for making a complete study of the behavior of structural materials under stress. The subgrade soils laboratory has apparatus for making the routine physical tests as outlined by the U. S. Bureau of Public Roads. The sanitary laboratory is equipped for making the standard analyses of water and sewage. In all of these laboratories provision is made for research and graduate work as well as for the undergraduate work.

The Experimental Sewage Treatment Plant is equipped for investigations in some of the methods of sewage disposal. Opportunities for practice and study are also provided at the water filter plant of the Champaign and Urbana Water Company, and at the Sewage Treatment Plant of the Urbana and Champaign Sanitary District.

Electrical Engineering.—For those who choose the curriculum in the theory of applied electricity the first two years of work are substantially the same as in other engineering curricula, including work in drafting room and shop, and instruction in the principles of mathematics and physics. In the second year a course in commercial and industrial wiring and illumination is offered. In the third year, courses are offered in circuit analysis, applied electronics, and the theory of direct current apparatus, with laboratory work which emphasizes principles. Technical courses, accompanied by laboratory exercises, covering the generation, transmission, and distribution of electric power, and its various applications are offered in the fourth year. Investigations of problems of power distribution and control and of communication are made in advanced laboratory and thesis work. In the fourth year, advanced courses covering the principles of electronics and radio communication are offered. The electronics and radio laboratories are well equipped with apparatus.

The Electrical Engineering Laboratory is supplied with power by the Power Plant of the University. The Electrical Engineering Annex contains the high voltage laboratory, with equipment for experimental work up to 300,000 volts, the illumination labo-

ratory containing complete equipment for the demonstration of illumination principles, and the photometry laboratory.

Mechanical Engineering.—The courses in the Department of Mechanical Engineering present the theory and practice of the generation and transmission of power, and of the design, construction, operation, and testing of machinery of all kinds. In the laboratories emphasis is given to the engineering and economic principles of machine operation, performance, and construction, and to problems of shop management.

The Mechanical Engineering Laboratory is equipped with machines and testing instruments for instruction in steam engineering, gas power engineering, refrigeration, heating, ventilating, and air conditioning.

The Shop Laboratories are provided with machinery and apparatus to illustrate the process of the manufacture of machinery. These laboratories include the Pattern Laboratory, the Foundry Laboratory, the Heat Treatment Laboratory, the Welding Laboratory, and the Machine Tool Laboratory.

Mechanics, Theoretical and Applied.—The courses in theoretical and applied mechanics are designed to meet the needs of students of engineering and of other colleges in which a knowledge of the laws of mechanics is important.

The Arthur Newell Talbot Laboratory houses the laboratories of the Departments of Theoretical and Applied Mechanics and Civil Engineering. In the applied mechanics laboratory the student makes all of the usual tests of strength of materials. The hydraulics laboratory has facilities for supplying and measuring water under a large range of pressure and volume. The fatigue of metals laboratory contains many machines of various types for testing specimens under repeated loading and under conditions of high temperature. The concrete laboratory has facilities for testing cement and aggregates and for making, curing, and testing mortars, concrete, and reinforced concrete. The structural laboratory is equipped with testing machines varying in capacity from thirty thousand to three million pounds and all the necessary instruments for making complete studies of the behavior of structural materials under stress. In these laboratories there is provision for research and graduate work in addition to the undergraduate work.

Mining and Metallurgical Engineering.—The Department of Mining and Metallurgical Engineering offers two curricula, as follows.

Mining Engineering.—The curriculum in mining engineering has four options: coal mining, ore mining, mining geology, and mine administration. To the preliminary courses in mathematics, physics, chemistry, general engineering drawing, and mechanics, common to all curricula in engineering, the department adds specialized work in mine surveying, mining methods, prospecting, mine examination, mine ventilation, coal washing and ore dressing, mine administration, and the design of mining plants.

Metallurgical Engineering.—This curriculum maintains a proper balance between process metallurgy and physical metallurgy. It is intended to prepare students for entrance, on graduation, into either branch of the industry, and to afford those whose interest lies in advanced study and research a broad foundation for the successful prosecution of graduate work in metallurgy. To this end the regular engineering fundamentals are retained, and specialized courses are provided in the principles of metallurgy, physical metallurgy, ferrous and non-ferrous metallurgy, metallography, physical-chemical treatment, electrometallurgy, and metallurgical design.

The Mining and Metallurgical Laboratories include the sampling and grinding laboratory, the chemical and physical laboratory, the coal preparation and ore dressing laboratory, the ventilation laboratory, the metallurgical laboratory, the metallographic laboratory, and the electrometallurgical laboratory.

Physics.—The Department of Physics offers a curriculum in engineering physics, designed to give students the broad and thorough training in fundamental physics and mathematics which is demanded by the increasing complexity of modern engineering practice. The work of the first two years is much like that in the other engineering curricula; in the last two years advanced courses in physics, mathematics, and chemistry are emphasized, but there is a liberal allowance of electives which the student may use to study the field of engineering in which he is especially interested. The details of technical applications are left to be learned in connection with a particular job; or, if the electives are properly selected, the engineering physics curriculum may be made a basis for graduate work in some particular field of engineering or in physics.

The Physics Laboratory, which has complete facilities for instruction and investigation in physics, is especially well equipped for investigations in spectroscopy, high vacua, acoustics, magnetism, electrical measurements, and optics. Gas, direct and alternating current at several voltages, distilled water, compressed air, vacuum, and liquid air are freely available. There are two workshops, one for the mechanicians of the department and one for instructors and advanced students, and a glassblowing shop in charge of a glassblower. An excellent working library of periodicals and books of special use in connection with the courses in physics is maintained on the second floor of the Physics Laboratory.

Railway Engineering.—To prepare students for service in the technical departments of railways, the Department of Railway Engineering offers curricula in railway civil engineering, railway electrical engineering, and railway mechanical engineering, all three of which are substantially the same as the corresponding civil, electrical, and mechanical engineering curricula to the end of the second year. The curriculum in railway civil engineering is prepared for those who plan to enter the engineering department of steam and electric railways, the curriculum in railway mechanical engineering is designed for those who wish to enter the motive-power department of steam railways, while the curriculum in railway electrical engineering is for those who will serve on electric railways or in the electrical departments of steam roads. The special subjects of the curriculum in railway civil engineering concern the location, design, construction, and maintenance of track and equipment, and the design of railway structures. The courses in railway electrical engineering deal with the design and construction of electric railway equipment, the operation and performance of electric cars and locomotives, and the problems which arise in the electrification of steam lines. The curriculum in railway mechanical engineering adds to the fundamentals of the general mechanical engineering curriculum special courses on the design of locomotives and cars, the resistance of trains, the performance and tests of locomotives, and tests of railway equipment.

The Locomotive Testing Plant, built from the original designs of the department, is devoted exclusively to making tests to determine the performance of locomotives. The locomotives tested have, for the most part, been furnished by railroad companies. For purposes of instruction a light freight locomotive is permanently available in this laboratory. This locomotive, donated by the Illinois Central Railroad, is of the mogul type with simple cylinders using saturated steam. The University owns and operates, jointly with the Illinois Central Railroad, a railway test car designed for experimental work on steam roads. It is equipped for making train resistance and locomotive performance tests. For work on electric roads the University owns an electric test car, of the interurban type, designed and built for the University. Through the courtesy of the Illinois Terminal Railroad this car is operated on its lines, which enter the campus of the University. Three steam roads (the Illinois Central, the Cleveland, Cincinnati, Chicago, & St. Louis, and the Wabash railroads) and one electric interurban road (the Illinois Terminal Railroad) enter Champaign and Urbana. The department is afforded by them opportunities for practical road tests and field work.

The College of Agriculture

TO PREPARE MEN AND WOMEN FOR SUCCESSFUL LIFE AND work in agriculture and home economics, the College of Agriculture offers a wide range of general and special courses in these two fields, which have in common an interest in the production, processing, sale, and use of food and clothing materials. Illinois, because of her situation near the center of one of the greatest agricultural regions in the world, is in a peculiarly advantageous position for teaching and research in agriculture and the related industries.

While many courses in this college are open to all qualified students in the University, most of the courses are designed primarily for students who find their major interests in agriculture or home economics and who desire to follow a four-year curriculum.

For men there is a general four-year curriculum, leading to the degree of Bachelor of Science in Agriculture, which trains for various types of farming, fruit and truck growing, transporting and marketing agricultural products, sales and service work with farm equipment and supplies, and numerous other kinds of employment, including state and federal programs, research and extension activities, in agriculture and its related industries. Students preparing to teach agriculture in the public schools obtain their fundamental courses in this curriculum and elect courses in the College of Education, or transfer to that college and complete the requirements for a bachelor's degree in agricultural education (page 161).

For women the College of Agriculture provides a general curriculum in home economics and a special curriculum in nutrition and dietetics. The four years of training in each of these curricula leads to the degree of Bachelor of Science. Graduates of these curricula are employed in homemaking, teaching, house planning and interior decorating, the designing of clothes and costumes, the management of cafeterias, dormitories, and tea-rooms, technical work in textile and food industries, dietetics in hospitals and other institutions, research projects, and extension activities, including the introduction and demonstration of new products and processes in all these lines. Students preparing to teach home economics in the public schools receive their basic training in these curricula and elect courses in the College of Education (page 159) to fulfill the requirements for teachers' certificates, or they may transfer to that college or to the College of Liberal Arts and Sciences (page 107) and there complete the requirements for baccalaureate degrees.

Special curricula in dairy technology and floriculture are provided in the College of Agriculture, each leading to the degree of Bachelor of Science. These are four-year curricula and include many courses in the liberal arts and sciences besides special training in the production, distribution, and use of dairy products and greenhouse products, respectively.

A two-year program of study preparatory to entry into a school of forestry is also available in this college. The introductory course in forestry is open to all students in the University above the rank of freshman.

The curriculum in agricultural engineering, which is administered by the College of Engineering, includes general and specialized courses offered in the Department of Agricultural Engineering and other departments in the College of Agriculture. A five-year program is available for any student who desires baccalaureate degrees from both these colleges.

The first two years in each curriculum include the necessary scientific and cultural basis for later specialization. Students entering this college are advised in groups by members of the faculty, and after a student has completed one year of work he selects a member of the faculty as his special adviser to aid him in planning his program. Every student is required to take certain courses in other colleges of the University and is encouraged to elect additional courses to balance his program and extend his range of interests.

Experiment Station.—The Agricultural Experiment Station provides facilities for research work to the faculty of the College of Agriculture, and almost every member of the teaching staff is engaged in experimental work designed to increase the knowledge in his particular field. Results of this research are published in bulletins and circulars available without cost to the citizens of Illinois. (See page 397.)

Extension Service.—The Extension Service in Agriculture and Home Economics is engaged in helping citizens of Illinois, particularly in the rural areas, to solve their problems in agriculture and homemaking. It cooperates with local leaders throughout the state in carrying on an extensive 4-H Club program for boys and girls. One hundred and two counties cooperate in the employment of farm advisers, and sixty-nine counties cooperate in the employment of home advisers who work with the extension representatives of each department of the College of Agriculture. Thus this service maintains a constant contact between the College and practical every-day problems in agriculture and homemaking. (See page 387.)

For *special conferences* and *short-courses*, see page 392.

Departments and Curricula

The College of Agriculture comprises seven departments which offer courses open to all qualified students in the University (page 201). These departments, their work and equipment, are described in the following paragraphs with reference to the curricula as outlined on subsequent pages.

Agricultural Economics.—Courses in agricultural economics pertain to economic principles as applied to agriculture, farm management, land economics, agricultural marketing, agricultural credit, agricultural prices and statistics, and rural organizations. A basic course in agricultural economics is designed to give an introduction to these fields. A more advanced course deals with the external economic relationships of agriculture, while work in farm management deals with the internal economic relationships of farming based upon financial and detailed cost records secured from farmers throughout Illinois. Work in land economics includes utilization, tenure, and conservation of land, while a course in farm appraisals is conducted in cooperation with other departments. Courses are available dealing with the principles and problems of agricultural marketing and cooperation, as well as with the particular problems connected with the marketing of grain, livestock, dairy products, and horticultural products. Work is offered in the field of agricultural credit, dealing with the credit needs of farmers and the means of supplying these needs. A course in agricultural prices and statistics includes work in price analysis and the application of statistical methods to agricultural data. Work in rural organizations deals with the structure and functions of and participation in farmers' organizations and trends in their development. Provision is made for advanced study in all of these fields by qualified undergraduate and graduate students.

Agricultural Engineering.—Courses in agricultural engineering cover the principles of engineering as applied to agriculture, including elementary farm mechanics, farm shop, drainage, farm buildings, concrete construction, farm machinery, tractors, harvesting machinery, horticultural machinery, dairy machinery, rural electrification, and farm home equipment. The University has an assortment of tractors, gas

engines, and farm machinery in this department for student use. Lighting units and water systems are provided in the home equipment laboratory. There is a drafting room for work in farm buildings, and facilities are provided for concrete construction. A curriculum in agricultural engineering is provided in the College of Engineering (page 132) for those students who plan to enter teaching, research, or design work in this field. The first-year requirements in this curriculum are the same as in other engineering courses. Specialization begins in the second year. Early in the course students have an opportunity to take work in the Department of Agricultural Engineering and also certain basic courses in the College of Agriculture. Those who are particularly interested in power and machinery have an option of special training in machine design. Another option is for those who are interested in farm drainage and structures. Students in the College of Agriculture who are interested in the technical curriculum in agricultural engineering may secure two degree in five years, one in agriculture and one in agricultural engineering, if they will carefully schedule the required courses of study in these curricula. It is essential that such students complete the courses in drawing, mathematics, physics, and mechanics required in agricultural engineering during their first three years at the University to be able to complete the requirements for both degrees by the end of the fifth year. Freshman students in Agriculture who are interested should consult the Head of the Department of Agricultural Engineering.

Agronomy.—Instruction in both crops and soils is given in the Department of Agronomy. Under crops are included such subjects as characteristics, production, and improvement of farm crops as well as the nature and control of crop enemies such as weeds, plant diseases, and insect pests. Courses in soils deal with the origin, formation, and classification of soils and also with variation, modification, and maintenance of productivity. Facilities for instruction include laboratories, field house, greenhouse, and field plots. Advanced students have opportunity to use these facilities both in their courses and in individual investigations.

Animal Husbandry.—Courses in animal husbandry cover the study of sheep, swine, poultry, and beef cattle, and their products; heavy and light horses, with their care and training; the management of herds, flocks, and studs; feeding, breeding, general sanitation, hygiene and disease control in livestock; and the chemical and physiological phases of animal nutrition. The University herds, flocks, and studs contain about six hundred pure-bred cattle, swine, sheep, and horses, and several hundred fowls, which are available for class purposes and for feeding and breeding investigations. The Stock Judging Pavilion offers opportunity for show and judging work. The department equipment includes buildings for the housing of beef cattle, swine, sheep, horses, and poultry, and a feed storage barn with grinding mills and other feed preparation machinery. Laboratories afford facilities for undergraduate and advanced study in animal nutrition, animal genetics, and animal diseases.

Dairy Husbandry.—The courses in dairy husbandry are concerned with the judging, breeding, feeding, and management of dairy cattle; the manufacture and marketing of dairy products; and dairy bacteriology and dairy chemistry. The equipment of this department includes a complete commercial creamery and a 180-acre farm stocked with typical representatives of the Holstein-Friesian, Jersey, Guernsey, Brown Swiss, and Ayrshire breeds.

Forestry.—The pre-forestry curriculum provides two years of study in subjects prerequisite to technical training in forestry. It prepares the student to enter a school of professional forestry with two years of advanced standing. Although registration is in the College of Agriculture, many of the courses of instruction are in the Colleges of Liberal Arts and Sciences and Engineering. The pre-forestry curriculum utilizes the laboratory, drafting, demonstration, and classroom facilities of several departments in each of these colleges as well as those of the College of Agriculture. The equipment of the Department of Forestry includes maps, charts, lantern slides, and a working library of some 3,500 books and pamphlets on forestry. Students who are interested in forestry as a profession should consult the Head of the Department of Forestry concerning registration in the pre-forestry curriculum.

Home Economics.—The courses given in this department are planned primarily to meet the needs of students who desire a knowledge of the general principles and facts of home economics. Opportunity is given through elective courses in the third and fourth years to emphasize various phases of home economics, such as house-

hold and institution management, nutrition and dietetics, house planning and furnishing, and textiles, clothing, and costume design. Courses in the teaching of home economics are available for those who plan to teach. The department is housed in the Woman's Building, where laboratories, lecture rooms, and an apartment for home management are provided. A cafeteria serves as a teaching laboratory in institution work.

Horticulture.—Courses in horticulture provide instruction in the four divisions (pomology, olericulture, floriculture, and plant breeding) and in subjects dealing with all divisions, such as plant propagation, spraying, the evolution of horticultural plants, and experimental horticulture. For instruction in pomology, use is made of the varietal and experimental plantations maintained by the department, and of the Horticultural Field Laboratory. This building is equipped with cold storages, constant-temperature chambers, and a greenhouse, and with chemical, botanical, and pathological laboratories. Facilities for instructional work in olericulture, or vegetable gardening, include a greenhouse and several acres of land on which garden operations are illustrated and the principal vegetable crops are grown. A laboratory furnishes opportunity for the study of methods of canning and packing. The equipment for floriculture includes ten glasshouses and a service building. The houses contain a selection of roses, carnations, and chrysanthemums, and of plants representing the forms used in commercial and decorative or conservatory work. The ornamental gardens furnish illustrative materials for students in floriculture and landscape architecture. Instruction in plant materials is facilitated by a collection of native woods and a forest tree plantation of about twenty acres.

Requirements for Graduation

Students who have satisfied the University's general requirements as to registration, residence, and fees, have maintained throughout their course a satisfactory record of scholarship and moral character, and have completed a curriculum in the College of Agriculture, including the studies of the prescribed lists and sufficient electives to make a total of 120 semester hours (not counting credit for the required work in military science and physical education), are graduated with the degree of Bachelor of Science.

For the special requirements of each curriculum see the outlines on the following pages.

A thesis is not required for graduation, but a senior may elect a thesis course in any department, provided that he has done at least 20 hours work in courses pertinent to the thesis problem and secures the approval of the head of the department.

A candidate for graduation must have completed by the beginning of his final semester all studies required for the degree except those to be taken in class during the semester, except, however, special examinations to remove failures, proficiency examinations, and course substitutions which must be completed by the beginning of the tenth week of the student's final semester.

Graduates of approved colleges may secure a degree in agriculture from the University on completion of the technical and scientific requirements. This usually requires two years of residence work; a minimum of one year is required. Students who have transferred from other educational institutions to the University of Illinois and are candidates for the degree of Bachelor of Science in Agriculture are required to complete a minimum of 18 hours credit in those courses in technical agriculture for which seniors receive full credit.

Not more than a total of two semester hours of hygiene and physical education, in addition to the University requirement, will be accepted for graduation in any curriculum in the College of Agriculture.

Graduation with Honors

Honors awarded at graduation to superior students are designated, after the degree on the diploma, as Honors, High Honors, and Highest Honors, according to the following rules: (a) For the degree with Honors, the student must have an average of 4.0 in all courses used for graduation. (b) For the degree with High Honors, a student must have an average of 4.25 in all courses counted toward graduation and pass a comprehensive examination in his field of major interest. (c) For the degree

with Highest Honors, the student must have an average of 4.5 in all courses used for graduation and give evidence of exceptional ability in passing a comprehensive examination in his field of major interest.

Curriculum in Agriculture

For the Degree of Bachelor of Science in Agriculture

All students in this curriculum are required to take certain prescribed courses during the freshman year and part of the sophomore and junior years. This work gives the student a conception of farm practices and an insight into the technical branches of agriculture and leaves a large part of the junior and senior years open for elective studies. The 120 hours required for graduation are grouped as follows:

In addition, all students must meet the University requirements in military science and physical education, which are to be commenced in the first semester of the freshman year and continued until completed.

After the second semester of the sophomore year, the minimum schedule is 15 hours per semester, exclusive of military and physical education. Excluding these two requirements, sophomore standing requires 27 hours; junior standing, 56 hours; senior standing, 88 hours.

ELECTIVES

GROUP 1.—Minimum 21 hours.

All courses offered by the College of Agriculture other than those prescribed.

GROUP 2.—Minimum 8 hours in addition to prescribed courses.

Selected from courses offered in English, foreign language, geography, history, landscape architecture, philosophy, political science, psychology, rhetoric, sociology, and speech.

Note.—Students expecting to take graduate work in agriculture should make their selection of electives primarily with this purpose in view, as the prescribed courses in the general curriculum in agriculture will not afford an adequate training for major work in any department of the college in the Graduate School. For adequate undergraduate preparation in his chosen field of major study the student should elect advanced courses in this and in related fields under the guidance of the department within which his major is to be taken, and he should also make a judicious selection of non-agricultural courses in order to afford a broad scientific and cultural foundation for his specialized training.

A thorough training in the general principles of biology is highly desirable in all fields of agriculture and essential in most, the nature of the proposed major field determining whether this training will be pursued mainly along botanical or zoological lines. For specialization in farm organization and management and in other phases of agricultural economics, economics rather than biology is the basic science.

An introductory course in physics is necessary to a well-balanced knowledge of the natural sciences, and will prove of value for advanced study in all lines of technical agriculture, while in some lines it is essential.

Mathematics, including college algebra, trigonometry, analytical geometry, and the calculus has a wide field of usefulness, particularly in preparing the prospective research student for a thorough understanding of statistical methods, essential to the interpretation of experimental data.

A reading knowledge of some of the foreign languages, particularly German and French, is essential to a study of the original contributions to any major field of graduate study. The prospective graduate student is advised to elect a year of work in either German or French.

The advisability of choosing other non-agricultural courses, such as those in advanced economics, accountancy, quantitative chemical analysis, physical chemistry, physiological chemistry, education, bacteriology, physiology, and entomology, will depend upon the nature of the proposed major and minors in the Graduate School.

Third Year

Agronomy 28, Soils, if not taken previously, should be scheduled either the first or second semester. Any remaining prescribed courses should be taken as early as possible. Select enough electives for each semester to make a total of 15-18 hours. Attention should be given to satisfying the requirements of Group 2, described below, and it should be kept in mind that Group 1 requires the selection of a total of 21 hours of agricultural electives in addition to the prescribed agricultural courses listed above. This leaves 21-25 hours of open electives which may be taken in any college or school of the University except for restrictions in physical education and hygiene indicated under "Requirements for Graduation." It is recommended that at the beginning of the third year the student, in consultation with his faculty adviser, lay out a detailed program of courses for the third and fourth years. Care should be taken to avoid too narrow specialization but at the same time to take related groups of courses designed to prepare the individual for the life and work which he expects to pursue.

Fourth Year

Schedule 15-18 hours of work each semester, following the lines indicated for the third year. It is important that each student consult his faculty adviser and plan his work for the year.

Curriculum in Dairy Technology

For the Degree of Bachelor of Science in Dairy Technology

The curriculum in dairy technology is planned for students interested in the business and technical aspects of dairy manufacturing. This four-year curriculum allows ample opportunity for the student to elect courses in various phases of dairy manufactures and in the fields related to it. Thus a student may specialize in the manufacturing and marketing of dairy products or the bacteriological, chemical, or engineering aspects of the field.

78-76 hours as indicated in the following proposed sequence of courses:

- 15 hours in Group 1 (listed below).
- 8 hours in Group 2 (listed below).

Curriculum in Floriculture

For the Degree of Bachelor of Science in Floriculture

The object of the floriculture curriculum is to fit men and women for the profession of floriculture. The laboratory exercises in the technical subjects consist of practical work in the greenhouses and gardens and give the students a working knowledge of the best methods now in use. Of the 120 semester hours required for graduation, 95-97 are provided for in the prescribed list as shown below. The other 23-25 hours of credit necessary for graduation are elective, including at least 4 hours from group 2 in the curriculum in Agriculture. Students registered in floriculture are required to make at least one inspection trip before graduation. The annual trip costs about \$25.

Suggested Electives.—The following courses are suggested as electives which may be taken during the third or fourth year: Bot. 46, Heredity and Evolution; Agron. 22, Improvement in Farm Crops by Breeding; Hort. 12, Evolution of Horticulture Plants; B. Pre-Forestry Curriculum

The object of the two-year pre-forestry curriculum is to prepare young men to enter a school of professional forestry with two years of advanced standing. The pre-forestry curriculum provides a course of study similar to that given during the first two years at a school of forestry. The course of study is of necessity modified somewhat to meet the different requirements of the various schools. Completion of the pre-forestry curriculum requires a minimum of 61 hours of work in addition to the University requirements in military science and physical education. Due to large increases in enrollment, many forestry schools have adopted rather high scholarship requirements. Students whose grades are below average in their pre-forestry work may be refused admittance to a forestry school.

Note.—The choice of electives will depend on the requirements of the particular school of forestry for which the student is preparing. Some forestry schools require a year of physics, and others do not; the same is true of zoology and other elective subjects. The branches of forestry in which a student is interested will also influence his choice of electives. A student expecting to stress the business and administrative aspects of the profession might well choose as electives other subjects than those indicated above. Any changes to meet the needs of individual students should be worked out in consultation with the Head of the Department of Forestry.

CURRICULA IN HOME ECONOMICS

Students who hold scholarships in home economics must take each semester at least four hours in home economics or in subjects required for admission to courses in home economics. Teacher Training

Students who are graduated with the degree of Bachelor of Science in Agriculture may qualify to teach under the Smith-Hughes Vocational Act if they have credit for a minimum of 15 hours of education, including one semester of practice teaching. Students applying for the degree of Bachelor of Science in Agricultural Education should take the first two years in the College of Agriculture, as required in the curriculum in Agriculture, and the last two years in the College of Education.

The College of Education

THE COLLEGE OF EDUCATION IS CONCERNED WITH LEARNING as a process, the principles and methods of teaching, and the organization of schools as agencies of culture. The courses of study, which are centered on the development of the individual as a social unit, fall into groups dealing with the philosophy, principles, and history of education, the psychology and technology of teaching, the management of school systems, the methods of extension and research, the planning of programs for group instruction and individual activities, the development of attitudes and habits necessary for success in complex environments. These groups have in common the aim of anticipating the needs of students as explorers and cultivators of the fields of learning in which they will become teachers.

The courses of study are supplemented by practice in teaching under special supervisors in school systems cooperating with the College of Education. The University High School, which serves as a laboratory for this college, affords experimentation under controlled conditions.

Candidates for baccalaureate degrees in the College of Education take certain required courses and elect other courses in this college, and prepare themselves further for their chosen fields by concentrating in restricted groups of subjects in other colleges and schools of the University. For those who wish to concentrate in the fields of agricultural education, home economics education, or industrial education, specialized curricula are provided in this college, each leading to the degree of Bachelor of Science. In the fields of other teaching subjects, sequences of courses comparable to these curricula are arranged for individual students by advisers.

Except for the curriculum in industrial education which begins with the freshman year and involves shopwork, the two years of study required for admission to these curricula may be done in any college. Juniors entering from the College of Liberal Arts and Sciences should have completed the prescribed subjects and group requirements of the general curriculum (or the first two years of the new general curriculum) in that college. A junior entering from another college of the University should have completed the first two years of a curriculum there, and anyone transferring from another institution must have acceptable credit for an equivalent amount of work in a curriculum of that institution.

All the introductory courses and most of the advanced courses offered in the College of Education are open to students enrolled in other colleges and schools of the University. Candidates for degrees in the other colleges and schools, while studying there the subjects they intend to teach, may fulfill the requirements for teachers' certificates by electing courses in education.

For *admission*, see pages 68 and 76; for regulations concerning *unclassified students*, see page 75; for general University requirements for a *bachelor's degree*, see page 82; for *fees and expenses*, see page 102; for *clubs and societies*, see page 98; for *conferences and short courses*, see page 394; for the *Bureau of Educational Research*, see page 406.

Students in the College of Education who are preparing for graduate work should arrange their undergraduate programs to meet the requirements for admission to the Graduate School (page 189). Those who desire positions as school librarians may obtain professional training in the Library School (page 187).

Requirements for Graduation

Each candidate for a baccalaureate degree in the College of Education must meet the University's general requirements with respect to registration, residence, fees, military science, and physical education and must secure credit, with a satisfactory scholastic average, in approved courses totaling at least 120 semester hours, including the credit accepted for admission to this college, but not counting the required work in military science and physical education.

In the other subjects of specialization the student must complete at least 16 hours of approved courses. In computing the hours in the subjects of specialization, courses taken in other colleges prior to admission may be counted.

Requirements for Certification

Committee on Appointment of Teachers.—The Committee on Appointment of Teachers, in response to requests from the school authorities, recommends qualified graduates of the University for positions as teachers or supervisors in public schools, colleges, and technical schools.

Certification of High School Teachers in Illinois.—A limited State High School Certificate, valid for four years for teaching and supervising in the high school and in the seventh and eighth grades, may be granted without examination to graduates who, within three years after graduation, present certified credits fulfilling the following requirements: (a) 6 semester hours in English¹; (b) 15 semester hours in edu-

¹English as used in the law shall mean grammar, composition, and rhetoric; i.e., the construction and use of good English, and not the history and interpretation of literature.

cation, including educational psychology and principles and methods of teaching; (c) specialization in three subjects or groups of related subjects, with a minimum of 16 semester hours in each, or in one subject of 16 semester hours and one subject of 32 semester hours.

The College of Education does not usually recommend candidates whose preparation does not go beyond these minimum requirements.

Graduates of the University of Illinois who have had at least 15 semester hours in education, including courses in supervision and administration, and who have had four years of successful teaching experience, may secure the State Supervisory and Administrative Certificate valid for four years for teaching and supervising in all grades.

The Limited State High School Certificates and the Limited State Supervisory Certificates may be exchanged for Life High School or Life Supervisory Certificates, respectively. The Limited State High School Certificate may be exchanged for a Life High School Certificate by filing evidence of four years of successful teaching experience and the completion of one year of work in advance of the requirements for a bachelor's degree. The Limited Supervisory Certificate may be exchanged for the Life Supervisory Certificate by certifying evidence of four years of successful supervision and the one year of work in advance of the requirements for the bachelor's degree.

Procedure to Obtain a Certificate.—The candidate upon completion of his work at the University should ask the Recorder to send to the State Department of Public Instruction at Springfield a transcript of his record. When a position has been secured he should apply for the certificate through the office of the County Superintendent of Schools in the county in which he is to teach.

The following standard, adopted by the North Central Association in April, 1933, became effective for the school year of 1934-1935 but is not retroactive within the association:

The superintendent or the principal directly in charge of the supervision and administration of the high schools shall hold a master's degree from a college belonging to the North Central Association, or the equivalent, and shall have had a minimum of six semester hours of graduate work in education and a minimum of two years of experience in teaching or administration.

THE UNIVERSITY HIGH SCHOOL

Organization and Purposes.—The purposes of the University High School are to offer instruction of a superior quality to pupils of the high school grades; to afford opportunities for observation and practice to University students who expect to teach; to provide a laboratory for the College of Education; to assist the teachers of the public schools of Illinois in the solution of their educational problems.

In order to insure the realization of these purposes, the University of Illinois maintains a secondary institution of high grade. The officers of administration carefully select the teachers in the University High School; they provide for the supervision of classroom activities; they permit classes of only moderate size; they limit the total enrollment, including the sub-freshman class, to two hundred fifty pupils; and they require students in attendance to maintain high standards of scholarship.

University High School is accredited by the North Central Association of Colleges and Secondary Schools, by the University of Illinois, and by the State Department of Public Instruction.

Building and Equipment.—The University High School is located at the corner of Mathews and Springfield Avenues in Urbana, on the campus of the University of Illinois. Near the high school is the gymnasium, in which the physical education classes meet and in which intramural and interscholastic games take place. The gymnasium is also a center for the social life of the school.

In the high school building are nine laboratories, supplied with ample modern equipment to serve the special needs of the departments of science, industrial arts, home economics, art, and commerce.

The library contains approximately 5,500 volumes of reference and recreational reading books carefully selected for high school pupils. In addition to the books,

there are in the library valuable picture and pamphlet collections. Thirty periodicals and a number of newspapers provide current reading materials. The University Library, of which the High School Library is a branch, supplements these facilities to meet temporary needs of the high school pupils.

The materials in the Visual Aids Service library are available for use in high school instruction. These materials include approximately 800 reels for motion pictures and 2000 glass slides. The films and slides are adapted to use in a wide range of subjects.

Admission Requirements.—Pupils are admitted to the University High School on the following plans:

1. Graduation from eighth grade. No examinations required.
2. Transfer from another high school. Pupils transferring from other high schools will be admitted upon evidence of honorable release. They will be allowed full credit for all completed courses which are the equivalents of courses taught in this high school.
3. Sub-Freshmen: Twenty pupils who have completed the first six grades or the equivalent make up the personnel of this class. These pupils complete in one year the essential features of the seventh and eighth grades. Elementary school records, scores on achievement and intelligence tests, and a health examination are the bases for the selection of superior pupils for this group.
4. Special Freshmen: Twenty pupils who have completed the first seven grades or the equivalent constitute the special freshman class. Elementary school records, scores on achievement tests, and a health examination are the bases for the selection of superior pupils for this class.

The Principal of the University High School will consider applications for admission in the order in which he receives them until he completes a registration of two hundred fifty pupils.

Summer Courses in the University High School.—Pupils are eligible to attend classes in the University High School Summer Session if they have been graduated from the eighth grade; or if they have been regularly registered pupils in good standing in another high school during the school year; or if they show evidence through written examinations of their ability to do a satisfactory type of high school work.

The College of Fine and Applied Arts

ALL STUDENTS IN THE UNIVERSITY MAY ELECT COURSES IN art, architecture, landscape architecture, and music. These introductory courses are designed to increase aesthetic appreciation and to clarify the role of the arts in civilization, to develop the ability to enjoy and evaluate the forms in which man's love of beauty is perpetuated. Besides affording this opportunity to all students who wish to take such courses for purposes of general culture, the College of Fine and Applied Arts offers professional training in each of its departments. Those who choose special curricula in this college are required to take certain courses in other colleges and schools of the University and may elect additional courses to balance their programs and extend their range of interests.

Requirements for Graduation

Students who meet the general University requirements with respect to registration, residence, scholarship, and fees, and who maintain a satisfactory record, receive degrees appropriate to the curricula completed.

Art.—Graduation from the curriculum in art requires 130 semester hours. This curriculum has four options: *painting*, *art education*, *commercial design*, and *industrial design*. The degree of Bachelor of Fine Arts is awarded in the option completed.

Architecture.—The curriculum in architecture, with two options, requires 142 semester hours for graduation. The degree of Bachelor of Science in Architecture is awarded on completion of the *general option*, and the degree of Bachelor of Science in Architectural Engineering on completion of the *construction option*.

Landscape Architecture.—The curriculum in landscape architecture requires 130 semester hours for graduation. The degree of Bachelor of Fine Arts in Landscape Architecture is conferred on students completing either the *general option* or the *option in city planning* in this curriculum.

Music.—Graduation from the School of Music requires 130 semester hours, as outlined in one of the curricula, with piano as a major or minor subject. The curriculum in music with instrumental, voice, or theory major leads to the degree of Bachelor of Music. The curriculum in music education leads to the degree of Bachelor of Science in Music Education.

For *admission*, see page 68; for general University requirements for a *bachelor's degree*, see page 82; for regulations concerning *unclassified students*, see page 75; for *museums and collections*, see page 65; for *clubs and societies* auxiliary to the curricula, see page 98; for *prizes and awards*, see page 85; for *fees and expenses*, see page 102; for the *Bureau of Community Planning*, see page 405; for *special conferences and short courses*, see page 394.

Electives

The electives provided in any curriculum of this college may consist of any courses given in the University and not required in the curriculum, not paralleling the subject matter of required courses, and not open to freshmen. The following, which are open to freshmen, are also acceptable as electives: History 1a, 1b, 2a, 2b, Library Science 12, Mathematics 5, Botany 1, Geography 1, Geology 1, Zoology 1.

Requirements for Teachers' Certificates

Candidates for the degree of Bachelor of Science in Art Education or in Music Education are required to take courses in education totaling fifteen semester hours, including at least five hours in practice teaching of their major subject, and a minimum of sixteen hours in another teaching subject, so as to qualify for certificates as teachers in the public schools of Illinois.

Requirements in Foreign Language

In any curriculum where a language requirement is specifically designated, as French or German, any student who has completed in high school one or more years of French or German, beyond the entrance requirements, and has had the same accredited to him by the Registrar, may be excused from language requirements specified, to the extent that one year's high school work will be considered the equivalent of one semester's work in college, and he may select additional elective courses to supply the correct total number of hours.

Inspection Trips

An inspection trip is one of the regular requirements in the senior year of the curricula in architecture and landscape architecture. The time required is three or four days, and the places visited are usually in Chicago. The trips are taken during term time under the supervision of University authorities. The expense to each student varies from \$25 to \$35.

Lorado Taft Lectureship

Alumni and friends of the University in 1930 endowed the Lorado Taft Lectureship in Art, for the maintenance of an annual series of lectures by one or more persons eminent in some field of art. From 1930 to the time of his death in 1936, invitations to give certain of these lectures were extended to Professor Taft, who thus continued to serve the University as Non-Resident Professor of Art. Lecturers prominent in the field of art appear in this series each year.

Carnegie Visiting Professorship

In 1939 the Carnegie Corporation established a Visiting Professorship in Art at the University of Illinois, for the support of a prominent artist who will reside on the campus, practice his art, and deliver lectures. Dale Nichols, painter, held this professorship in 1939-1940.

DEPARTMENTS AND CURRICULA

The College of Fine and Applied Arts was organized in 1931 to correlate the work of several departments which had been in other administrative units of the University. It consists of the Department of Art (formerly in the College of Liberal Arts and Sciences), the Department of Architecture (formerly in the College of Engineering), the Department of Landscape Architecture (formerly in the College of Agriculture), and the School of Music (formerly a separate unit). In addition to the undergraduate curricula described below, the School of Music and the Department of Architecture conduct graduate work leading to advanced degrees. For lists of the courses see page 201.

Architecture

The practice of architecture is so diversified that no one can encompass it in all its details. A certain degree of specialization is therefore necessary. In order to train future architects two options are offered, the *general option* and the *construction option*. A general understanding of architecture and of the architect's duties is emphasized in both options. The first year's work is identical in both, and the student selects a field of specialization in the second year. Pronounced specialization, however, does not occur until the third year. (Students intending to study architecture should study in high school the subjects recommended for admission on page 73.)

The *general option* places the major emphasis on architectural design and includes a substantial program in architectural construction. While the aesthetic is emphasized, basic preparation in liberal and scientific fields is required. The aim is to train the student for efficient service as a draftsman or designer in an architectural organization and to provide him with the necessary foundation for future independent practice.

The *construction option* (architectural engineering) offers a major study in building design from the standpoint of safety and economy. It provides a thorough training in all forms of building construction and emphasizes the structural and me-

chanical aspects of architecture. As the curriculum includes two years of architectural design, freehand drawing, and the history of architecture, the student who is primarily interested in construction can acquire a considerable knowledge of the artistic and utilitarian phases of planning. This option affords a relatively wide range of elective courses in the social sciences, business, engineering, language, and literature. It also provides sufficient training for independent practice as an architectural engineer.

The Department of Architecture is located in the Building for Architecture and Kindred Subjects, where ample offices, studios, and drafting rooms are provided. The Ricker Library of Architecture, occupying the second floor of the north wing of this building, is one of the best of its kind. Here is housed a collection of more than 14,400 volumes on architecture and the allied arts, together with 15,400 lantern slides, 7,250 mounted photographs and drawings, 6,250 clippings, 600 pamphlets, and a large collection of stereoscopic views.

Art

The curriculum in art is so organized as to enable the student to attain a proficiency in art and at the same time to secure a liberal education. The first two years of the curriculum are basic and cultural, and at the beginning of the third year the student chooses his field of specialization in one of the following options: painting, art education, industrial design, commercial design.

The *option in painting* forms a preparation for the following fields of applied art, as well as for other related fields; landscape painting, portraiture, illustration, mural decoration.

The *option in art education* offers a carefully balanced specialization in teaching methods, materials, and processes and conforms to the regulations set down by the office of the State Superintendent of Public Instruction. This option, while particularly designed for those students who are primarily interested in the teaching of art, affords preparation for the fields of art supervision and applied design.

The *option in industrial design* has as its purpose the training of designers for the machine industries. There is a well-defined demand for artists who can apply aesthetic principles to the design of articles produced by machines. This option aims to give the student a firm grasp of the principles of design, to develop in him speed and resourcefulness in expression, and to train him to adapt his knowledge and creative abilities to the conditions under which the designer must work in industry.

The *option in commercial design* trains artists in the application of aesthetic principles in the fields of advertising, printing, merchandising, and salesmanship. In addition to the required professional studies, ample opportunity for electives is provided.

The Department of Art has a series of well-equipped and ideally lighted studios and modeling rooms in the Building for Architecture and Kindred Subjects. Additional studios are also maintained in Lincoln Hall and Engineering Hall. Quarters for modeling in clay and plaster are in the Commerce Building, and for industrial design in the Civil Engineering Surveying Building, located near the Architecture Building. The Carnegie Visiting Professor of Art has his studio in Mumford House, which is also on the south campus.

This department has well-selected collections of models, casts, bronzes, paintings, etchings, and prints and adequate collections of lantern slides and photographs of famous works of art. The Hall of Casts in the Architecture Building, well stocked with plaster replicas of many of the great works of sculptural art (including many of the masterpieces of Lorado Taft), makes an excellent place for sketching. Professional models with special training are employed as subjects for the classes in drawing, painting, and modeling from life. Art students share in the use of the Ricker Library, which includes the literature of art as well as architecture.

Landscape Architecture

The work in landscape architecture consists of a four-year curriculum providing two options. The *general option* offers instruction in the fundamentals of landscape design, materials, and construction. The *city planning option* offers preparation for an im-

portant branch of the profession. The first two years of this option are identical with those of the general option, the last two years permitting specialization in civic design and the study of community planning problems. Several courses of popular interest are offered for students from other colleges seeking an appreciation of landscape art.

The Department of Landscape Architecture occupies the north half of the second floor of the New Agriculture Building. The equipment includes ample drafting rooms, seminar rooms, lecture rooms, and an excellent professional library. The collections of trees and shrubs growing upon the campus and about residences in the community, together with the ornamental gardens of the University, furnish material for studies in planting design. Instruction in plant materials is facilitated by a collection of native woods, a forest tree plantation of about twenty acres, and the University Arboretum. The herbarium in charge of the Department of Botany is also available for reference.

Music

The School of Music offers a curriculum in music, with three options as shown on following pages, leading to the degree of Bachelor of Music, and a curriculum in music education, leading to the degree of Bachelor of Science in Music Education. A student enrolled in any music curriculum pursues through his course (except the third and fourth years of the curriculum in music education) two applied subjects: one a *major* (piano, voice, etc.) in which two 30-minute lessons a week are taken, the other a *minor* in which two 20-minute lessons a week are taken. Public performance is a definite part of the training in applied music, and all students, when sufficiently advanced, are required to participate in the student programs. Courses in the history, theory, and appreciation of music are open also to all qualified students in the University.

The University Chorus, the University Orchestra, the Men's Glee Club, and the University Women's Glee Club, which are open to qualified persons from any college, are sponsored by the School of Music. The University Chorus meets once a week for rehearsal and gives three concerts during the year. Members of the faculty, students of the University, and singers of the community are admitted to the chorus by examination or conference with the director. The University Orchestra meets for rehearsal twice each week and presents concerts throughout the year.

The School of Music occupies the Tina Weedon Smith Memorial Hall, which has sound-proof studios, extensive equipment of musical instruments, an auditorium specially designed for public recitals and concerts, a large lecture room, and classrooms.

Vesper organ recitals every Sunday, occasional concerts by members of the faculty, numerous recitals and concerts by students, and other public programs are sponsored by the School of Music.

Curriculum in Music—Theory Major

For the Degree of Bachelor of Music

A student may take a major in Theory of Music only on recommendation of the Director. In addition to the complete theory course offered in the Instrumental Major, he must complete the courses in Composition (Music 11a-b and 12a-b). In addition during the senior year he must present a recital of his own compositions and orchestral arrangements. His work in applied music must be equivalent to that of three years of collegiate study.

Curriculum in Music Education

For the Degree of Bachelor of Science in Music Education

Applied music subjects must include two years of Piano (first two years), and at least two semesters of Voice. Applied music subjects should have 16 hours of major credit in one subject and 10 hours of minor credit in another subject.

THE UNIVERSITY BANDS

THE UNIVERSITY BANDS comprise three organizations: the Concert Band, the First Regimental Band, and the Second Regimental Band. Places in these organizations are determined by examination, and service in them takes the place of the required military training. Members of the Concert Band, after satisfying their military credit, are eligible to receive scholarships amounting to the annual fees required from students residing in Illinois.

¹A minimum of 16 hours for a second teaching subject is required.

The bands furnish the music for military ceremonies, parades, convocations, athletic events, Commencement, and other occasions. The First and Second Regimental Bands serve to train members for the Concert Band, which is composed of selected musicians whose main purpose is to study the higher forms of music. In addition to giving numerous concerts on the campus, the Concert Band makes an annual tour of mid-western cities.

The University owns a varied and complete equipment of band instruments and a very extensive collection of band music, including the John Philip Sousa Memorial Library, which is undoubtedly the greatest collection of music for the modern symphonic band in this country and one of the largest and finest libraries of band music in the world.

Further information may be secured by addressing the Director of Bands, Room 12, Band Building.

The College of Law

IN TRAINING MEN AND WOMEN FOR THE PRACTICE OF LAW, the College of Law seeks to inculcate an appreciation of the purpose of law in the social order and an understanding of its development and the necessity of its growth as conditions change. For this purpose the decisions of the courts are studied in relation to the social and economic forces that influence trends in the law. The instructional methods used by the members of the faculty are designed to impress on the students the value of clear thinking and expression.

For admission, see pages 68 and 77; for general University requirements for a bachelor's degree, see page 82; for regulations concerning *unclassified students*, see page 75; for *fees and expenses*, see page 102.

Law Library.—The Law Library contains 64,000 volumes, including all the reports of the state courts of last resort and the state intermediate courts, six sets of reports of the United States Supreme Court, the reports of the subordinate federal courts, and most of the English, Irish, Scotch, Australian, and Canadian reports. It contains the current statute law of the United States and the various states, of Great Britain and other portions of the British Empire, and over 4,800 volumes of the older compilations and session laws. It also contains the leading sets of American and English selected case series, encyclopedias, digests, and legal services. Besides extensive collections of standard treatises, textbooks, and bar association reports, there are 5,000 bound volumes of legal periodicals. About 220 periodicals are received currently.

Admission to Advanced Standing.—Students from law schools of approved standing who comply with the requirements for admission to this school may receive by transfer not to exceed two years of credit. The amount of credit given for work taken in another school is conditioned upon the standards of the school and the grades the student has received. As a rule, credit will be given only in subjects in which the applicant has secured a grade ten per cent above the passing mark, or, where the literal system is employed, a letter above the passing mark.

Six-Year Combined Curricula.—Thirty-two hours of law may be credited toward the degree of Bachelor of Arts in the College of Liberal Arts and Sciences and thirty hours toward the degree of Bachelor of Science in the College of Commerce and Business Administration. In this manner students may secure in six years both a degree in arts or commerce and a degree in law. (See page 112 for statement of electives in law in the College of Liberal Arts and Sciences and page 123 for statement on Commerce and Law.) A candidate for both degrees must in his fourth year register in the College of Law, and also register or file a copy of his study-list in his other college, as that college may require.

Students in Other Colleges Electing Law Courses.—A student registered in another college of the University who has an average grade of 3.25 and who otherwise is eligible to enrollment in the College of Law, may elect courses in law provided that not less than two courses amounting to at least five hours are taken per semester, under the advice of the dean of the College of Law as to the courses to be taken, and provided, further, that if any such student desires to take more than six hours of law work, he must register in the College of Law and thus become subject to the regulations of this college.

Pre-Legal Work.—Students are advised to plan their pre-legal college work with care and to consult members of the law faculty in regard to their plans. Students taking the combined curriculum of either the College of Liberal Arts and Sciences or the College of Commerce and Business Administration and the College of Law must comply with the group, major, and minor requirements of the college in which their pre-legal work is taken. Such students are urged to complete all of these requirements before entering the College of Law, in order that they may then devote their entire time to the first year of the law curriculum.

Professional Courses.—The courses of the first year in the College of Law are prescribed as shown in the following outline. The courses of the second and third years are elective. Fifteen hours of law work should be enough to occupy a student's full time; he can not register for more without special permission.

Specialization in Certain Fields of the Law.—The program of courses is so arranged that a student may enter on a measure of specialization in some fields. This is accomplished through giving substantial primary courses open to all students and designed to meet the needs of those who desire to prepare themselves only for general practice, and through offering to others, who wish further training in particular fields, the opportunity to elect in them separate and advanced courses.

Requirements for Graduation

The degree of Bachelor of Laws (LL.B.) will be conferred on students who, having studied law for a period equal to three academic years, obtain 84 law credits with an average grade of at least "C" (3.) in such of those credits as were obtained in courses taken in the University.

The degree of Doctor of Law (J.D.) will be granted to students who comply with the following conditions:

(1) Secure a bachelor's degree in the College of Liberal Arts and Sciences or in the College of Commerce and Business Administration at least two academic years prior to the completion of the courses for the degree of Doctor of Law.

(2) Complete the work required for the degree of Bachelor of Laws.

(3) Obtain a minimum average grade of "B" in the College of Law. If the grade is below "B," the degree conferred is Bachelor of Laws.

(4) Present a thesis approved by the faculty of the College of Law, in accordance with the requirements. Credit may be earned for work done on the thesis and counted in making up the number of hours required for graduation.

Scholarship Requirements.—Regular examinations are given at the close of each semester in all subjects except those whose character renders it impracticable. The grades given at the end of each course are indicated by the letters A, B, C, D, and E. These respectively represent the standing of students as Excellent, Good, Fair, Poor, and Failing. For the purpose of computing the average grade of a student a system is employed in which the following values are assigned to the grades received: "A" equals 5; "B" equals 4; "C" equals 3; "D" equals 2; "E" equals 1. A student in the College of Law will be dropped from the University (1) if at the end of his first year of residence he has not secured an average of 3. in his work; (2) if at the end of his second year he has not secured an average of 3. in all of the law work he has taken up to that time; (3) if he fails in any semester to pass in at least eight hours of the work in which he registered, or if he fails in a summer session to pass in at least four hours; (4) if registered in less than eight hours in a semester, or in less than four hours in a summer session, he does not pass in all his work. A student who, at the end of his third year of law study, has failed to secure an average of 3. in all law work taken by him in the University will be permitted to continue in this college only by special permission granted on petition. For the purpose of determining the eligibility of a student to remain in this college, work taken in summer session will be valued with the work of the following year; when taken after the student's third year of law study, it will be valued with all of the law work he has taken previously in this University for the purpose of determining his eligibility for graduation.

Honors.—A student who complies with the requirements for graduation from the College of Law (degree of LL.B. or J.D.) and who attains in all work done in courses offered in the college, and presented for the degree, the average grade specified below, may be recommended by the University Senate for the honors stated: For an average grade of not less than 4.35, graduation with Honors; for an average grade of not less than 4.75, graduation with High Honors. The honors conferred shall be noted upon the diploma and the Commencement program.

Scholarships

Four scholarships covering full-tuition and four scholarships covering half-tuition are awarded at the end of each year under the following regulations:

(1) The four full-tuition scholarships shall be given to the four students in the College of Law having the highest averages in their law work in the preceding year. The four half-tuition scholarships shall be given to the four students in the College of Law having the next highest averages in their law work in the preceding year.

(2) To be eligible a student must have been registered as a regular student in the College of Law both semesters, and have taken at least 28 hours of work of which not less than 20 hours must have been in law courses.

(3) A student who does not return the following year may use his scholarship subsequently, provided a period of not more than one year shall have intervened.

Order of the Coif

Each year ten per cent of the senior class (or a minimum of three students) are eligible to the Order of the Coif, a national honorary law society organized to promote scholarship in law, the first chapter of which was established at the College of Law in 1902. Elections of seniors to the Order of the Coif are held at the beginning of the second semester.

Illinois Bar Journal

The section on "Current Law" in the *Illinois Bar Journal*, official publication of the Illinois State Bar Association, is prepared by a board of student editors who are chosen, primarily on the basis of scholarship, from the students in the College of Law. This editorial work is done with the advice of members of the faculty, and it forms a part of the educational program of the college.

The School of Journalism

FOR STUDENTS WHO HAVE TWO YEARS OF COLLEGE WORK, the School of Journalism offers curricula comprising two years of professional study and leading to the degree of Bachelor of Science in Journalism. These curricula are designed to prepare students for general practice and service in the publication field, for particular types of work on newspapers, for work on trade and technical publications, and for other forms of service to the specialized press.

Students planning to enter the School of Journalism are advised to register as pre-journalism freshmen and sophomores in the College of Liberal Arts and Sciences and elect certain courses in journalism, or to do equivalent work in some other college. Although the University requires only three units of high school credit in English for admission to the freshman class, a student may be more adequately prepared for work in journalism by studying English for four years and working on his high school's publications. While only two units in foreign language are required for admission to the College of Liberal Arts and Sciences, four years of study of foreign languages in high school are advantageous for work in journalism and are especially helpful to students intending to enter the Graduate School for advanced degrees. In general, two units in mathematics, one unit in science, and two units in social studies are also recommended.

As the teletype is coming into general use, the ability to operate a typewriter rapidly and accurately is becoming an advantage to reporters and editors. Pre-journalism and professional students are advised to secure training in typing and to devote a generous amount of time to practice. Shorthand is desirable but is not required.

For admission, see pages 68 and 77; for fees and expenses, see page 102; for prizes and awards, see page 85; for regulations concerning unclassified students, see page 75; for general University requirements for a bachelor's degree, see page 82; for clubs and societies, see page 98; for conferences and short courses, see page 395.

Requirements for Graduation

A candidate for the degree of Bachelor of Science in Journalism must (1) meet the general University requirements with respect to registration, residence, scholarship, and fees; (2) complete 64 hours of work in a curriculum of the School of Journalism, including 30 hours in journalism and 34 hours in social studies, arts, science, and vocational subjects approved by this school; and (3) obtain as many grade-points as credit hours in courses taken at the University of Illinois and presented for the degree, except that the 60 hours required for admission to the School of Journalism and the military science and physical education required by the University are not included in the computation of grade-points for this purpose.

Note.—Students entering the School of Journalism by transfer from other colleges or universities have no military or physical education requirements. Attention is called to the general requirement that a student who enters the University without at least one unit of high school work in a laboratory science must substitute five hours of a laboratory science for five hours of free electives in the requirements for graduation. All students in the School of Journalism are required to attend the weekly convocations for lectures and general instructions throughout their junior and senior years, although no credit toward graduation is given for so doing.

The School of Physical Education

SINCE HEALTH, SANITATION, AND APPRECIATION OF SPORTS all contribute to the enjoyment of living by promoting physical and mental well-being, it is the purpose of the School of Physical Education to acquaint all students in the University with the benefits that can be obtained from physical recreation and to teach them the fundamentals of hygiene and sanitation. For those who wish to prepare for teaching physical education, coaching athletics, and directing recreation this school offers two professional curricula—one for men, and another for women—each leading to the degree of Bachelor of Science.

For *admission*, see page 68; for *fees and expenses*, see page 102; for *clubs and societies* auxiliary to the curricula, see page 98; for regulations concerning *unclassified students*, see page 75; for general University requirements for a *bachelor's degree*, see page 82.

General Courses in Physical Education.—To insure each student's having a sufficient knowledge of some of the common sports to enjoy participating in healthful physical recreation, the University requires all students to take four semesters of physical education or to pass proficiency examinations equivalent to the required work. These courses, conducted by the Department of Physical Education for Men and the Department of Physical Education for Women, are designed to promote a higher standard of physical fitness by developing knowledge, appreciation, and skill in desirable recreational sports. Juniors, seniors, and graduate students who have credit in the elementary courses may elect advanced courses. Freshmen and sophomores found to be physically deficient are assigned to courses adapted to their individual needs.

Extracurricular Sports.—The Athletic Association, which is closely affiliated with the School of Physical Education, sponsors programs of intercollegiate and intramural sports, which are open to undergraduates only, and recreational sports, which are open to all students and the faculty.

The Department of Physical Education for Women conducts an extensive program of intramural sports for women. Students are organized in voluntary inter-class and inter-house teams in hockey, soccer, bowling, basketball, volleyball, apparatus, swimming, baseball, and track and field athletics.

Health Service.—The purposes of the Health Service are to promote the physical and mental health of students, to control diseases, and to teach the essentials of healthful living. It offers two elementary courses in hygiene, one for men and one for women, which are required of all students, and an advanced course which is elective. This department also conducts the physical examinations required of all new students at the time of registration and has charge of hospital service and campus sanitation. Students who are found to have subnormal conditions report to the Health Service for periodic conferences until their defects are corrected or improved enough to warrant discontinuance of supervision. All students may secure free medical advice at any time that their health is impaired. Hospital service to the extent of four weeks is provided for each student or faculty member who joins the Hospital Association (page 97).

Curriculum in Physical Education for Men

For the Degree of Bachelor of Science in Physical Education

The professional curriculum in physical education for men is designed to prepare students for teaching physical education, coaching athletics, and directing recreation. The degree of Bachelor of Science in Physical Education is conferred on students who successfully complete a total of 130 semester hours, including the required work in military science, as summarized and outlined on the following page.

Inspection Trip.—All men students whose major is physical education are required to participate in an inspection trip during the second semester of the junior year. The trip occupies three or four days and involves expenses of not more than \$25 for each student. The party visits Chicago, St. Louis, or some other large community, to inspect elementary school, high school, and college physical education plants, athletic clubs, playgrounds, parks, and other recreational centers. Special arrangements for observing programs in operation and attending lectures by prominent authorities are provided. Each student is asked to write a report of the trip. No credit is given, but a grade is given for the trip and report.

Curriculum in Physical Education for Women

For the Degree of Bachelor of Science in Physical Education

The four-year curriculum in physical education for women is designed to train teachers in the fields of physical education, health education, community welfare, and recreation. The degree of Bachelor of Science in Physical Education is conferred on students who successfully complete a total of 130 semester hours, as prescribed below, including a minimum of 40 hours in physical education courses, 16 hours in a second subject of specialization, and 18 hours in education courses (including Ed. 6, 10, and 25 and Ed. Pr. 3 and 4).

Modifications of this curriculum are provided for students who wish to prepare themselves to teach various combinations of subjects in high school. Thus, with physical education as the major subject, the second teaching subject may be English, or biological science, or general science; or some other combination may be arranged. Another modification of the curriculum allows for specialization in the dance. The choice of electives in each semester must have the approval of the class adviser at registration time.

Transfer students from other colleges or normal schools must have the necessary prerequisites in order to make physical education their major subject.

¹Students who take *Group A* first semester must take *Group B* second semester. Students who take *Group B* first semester must take *Group A* second semester.

The Library School

COLLEGE GRADUATES WHO WISH TO ENTER LIBRARIANSHIP as a profession are offered a two-year curriculum in library science. The instruction in the first year in the Library School covers methods and practice in library work; students who complete this year of study are prepared for positions in library service. In the second year, conducted under the auspices of the Graduate School, seminar courses and individual study are emphasized; bibliographic training is predominant; research methods are introduced to give the student the preparation required for the more responsible and exacting library positions.

Undergraduates.—Seniors, after consultation with the Director of the Library School and the instructor in the course, may elect any course for which they are prepared. Freshmen and sophomores are offered a course in the use of the library and the ordinary reference books.

For admission, see pages 68 and 77; for an account of the *Library*, see page 64; for the *collection in library science*, page 68; for *fees*, page 102.

Pre-Professional Study.—Undergraduates who intend, on completing their college work, to apply for admission to the Library School, are advised to select courses which will build up their general knowledge of a wide range of subject-matter. Two or three years of college study in French and German are advised. A reading knowledge of these languages is practically necessary. It is highly desirable that two years of high school Latin or one year of college Latin be presented. To attain the broad cultural background necessary to an understanding and performance of library work, the student should select courses which will make him familiar with the history and development of the literature of many fields of knowledge. The increasing specialization of library service, however, has opened opportunities for librarians to use highly specialized knowledge in almost any subject. School authorities and supervisors of school libraries, for example, generally prefer school librarians who are also professionally qualified to teach. Other types of special libraries, such as scientific, hospital, business, law, and newspaper libraries, require preparation in their specific professional fields. Consequently, an effort should be made to maintain a strong major subject throughout the years of pre-professional study and to acquire besides this as broad an education as is possible in view of the local college requirements.

The scholastic record maintained must be well above average in order to assure a satisfactory record later in the Library School. An average of 3.5 (based on A as 5, B as 4, etc.) is a minimum requirement.

The ability to type easily is practically essential. A knowledge of business correspondence methods and report writing is expected. Training in speech, in order to facilitate talking before groups, is highly desirable.

Personal qualifications are predicated upon the fundamental factors of a sympathetic understanding of people as patrons of a library.

Some experience in a library is conceded by most students to be of real value.

Advanced Standing.—After matriculation, an applicant for advanced standing may secure credit for some of the courses required for the bachelor's degree in Library Science by transfer of credits from an approved institution, or by examination if the applicant gives indication of having adequate preparation. In such cases, however, the student must still meet the residence requirements for the degree, and, in consequence, must register for a sufficient number of courses, either in the Library School or in a subject of special interest to him, to make up the usual full schedule of student work. Information concerning the possibility of securing advanced standing should be requested with the letter of application.

Applications.—Application blanks for admission may be secured from the Library School and must be returned sufficiently early to allow the School adequate time to secure before registration day the necessary information as to the applicant's qualifications for library service.

Degrees.—The full curriculum is two years in length. The degree of Bachelor of Science in Library Science is conferred on a student who has received credit in

approved courses amounting to 30 semester hours. Students are not encouraged to continue the second year's work unless they have a basis of satisfactory experience. Second-year students are candidates for the master's degree with the major in Library Science, and register in the Graduate School, meeting its requirements. The Graduate School does not encourage the admission of students whose grade averages are lower than "B" in their professional and pre-professional training.

Library Visits.—Each year all the first-year students in the Library School are required to visit the libraries and certain of the book binderies and printing establishments of Chicago, St. Louis, or other large cities and their vicinities. During this visit, which occupies one week, the students are accompanied by members of the faculty. The expense for this week is about \$30 per student.

Library Club.—Any member of the Library School faculty or of the staff of the University Library and any student in the Library School may become a member. Four or more meetings are held each year.

Summer Session.—Curricula leading to the degree of Bachelor of Science in Library Science and to the degree of Master of Science in Library Science may each be completed in four consecutive summer sessions.

FACILITIES FOR ADVANCED STUDY AND FOR RESEARCH IN various lines were offered by the University as early as 1872, and organized instruction under the name of the Graduate School was first undertaken in 1892. In 1906 the Graduate School was organized as a separate faculty. By action of the Trustees of the University, the teaching faculty of the Graduate School now includes all members of the University faculty who give instruction in approved graduate courses. The affairs of the school are in charge of the Executive Faculty.

Admission.—Admission to the Graduate School may be granted to graduates of institutions whose requirements for the bachelor's degree are substantially equivalent to those of the University of Illinois. Admission to the Graduate School, however, does not imply admission to candidacy for an advanced degree, and gives the student no right or claim to be so admitted. A mere accumulation of "credits" or "grades" is not sufficient.

Admission to graduate courses may be granted only to those who have had the requisite undergraduate work in those courses or departments. But a student of mature age who satisfies the Dean and the department concerned of his ability to pursue graduate work in a given line may be enrolled in particular graduate courses, without reference to a degree, and permitted to carry on such study or investigation under the direction of a department of the University as the department shall recommend and the Dean approve.

Application blanks for admission may be secured from the Registrar of the University. Every applicant must submit with his application for admission an official transcript of his college record. All students, except those entering only for summer sessions, who have not previously taken a physical examination at the University, must take such an examination. The examination is given by the University Health Service without cost to the student, if taken at the time of appointment during the registration period.

Character of Graduate Work.—The principal aims of graduate study are the development of the power of independent work and the promotion of the spirit of

research. Each candidate for a degree is expected to have a wide knowledge of his subject and of related fields of work; for the graduate student is not expected to get from lecture and laboratory courses all the knowledge and training necessary to meet the requirements for his degree.

Graduate Study in the Summer.—Graduate students in the summer session are subject to the same scholastic requirements as those in the regular university year. Their study-lists must be approved by the Dean of the Graduate School, or his representative. Two to two and one-half units of graduate work may be taken in the summer session. Two units is considered a full minimum program for the summer. Attendance during four out of six consecutive summer sessions, or one semester and two summer sessions, is considered the equivalent of one year in residence. No course offered in the summer session may be taken for credit towards a higher degree unless it is described in the summer session circular as accepted for that purpose.

The Executive Faculty may, at the request of a given department, accord recognition to its summer session work subject to the following conditions: (1) Study in the University of Illinois summer session may be counted in partial fulfillment of the residence requirements for the degree of Doctor of Philosophy, but at least one continuous academic year of residence at the University at some time during the second or third years of the doctoral program is required. (2) Persons electing to use this plan shall be required to submit a schedule of study covering the second and third years of work toward the doctorate. This schedule of study must be approved by the adviser in charge of the major subject and by the Dean of the Graduate School. (3) Apart from the provisions stated above, the present practices and standards of the Graduate School relating to the doctorate shall be continued.

Summer Work in Medical Sciences.—Graduate courses in medical sciences are offered in the summer quarter between June and September at the College of Medicine of the University of Illinois in Chicago.

The Master's Degree

Character of the Master's Degree.—The master's degree conferred depends on the character of the bachelor's degree. The usual practice is that A.M. shall follow A.B., and that M.S. shall follow B.S. However, this practice may be departed from in cases where the undergraduate course of study of the candidate was of a kind for which some reputable institutions in this country give A.B., while others give B.S.

Amount of Work Required.—Candidates for the degree of Master of Arts or Master of Science are required to do at least one full year's work in residence, usually including a thesis. Four to five units constitute a normal semester program for the master's degree. A minimum of eight units must be completed for the degree. Only first-rate students are permitted to secure a degree with this minimum program. In some departments special examinations are required of candidates for masters' degrees. In all cases the student must satisfy the duly approved conditions set by his major and minor departments.

Unless otherwise permitted, every student must take each semester at least one course open to graduate students only (courses numbered 100 and upwards).

In the first year of his graduate study each student is required to attend a minimum of four formal class, lecture, or laboratory exercises a week. Schedules involving an unusually large number of formal class meetings per week will require the special approval of the Dean.

Work Done Elsewhere.—Members of the staff and high school teachers residing and employed in Urbana or Champaign who have done graduate work in approved institutions elsewhere may secure credit not to exceed four units towards the master's degree by passing examinations in that work. They may complete the work for the degree by securing at least four units more while registered in the Graduate School for not less than one academic year.

Graduate students who have been in residence one semester or its equivalent may offer for credit not more than nine weeks of work at a marine or fresh-water biological laboratory or in biological or geological field work, on condition that the work be of graduate grade under a qualified instructor or director as certified by the student's major adviser and approved by the Dean of the Graduate School; that approval be

obtained by the student in advance; and that a written report of the work accomplished be presented by the student and approved as satisfactory by the student's major adviser.

Majors and Minors.—A candidate for a master's degree may do all his work in one subject, or he may select a major and one minor, or a major and two minors. A major or minor denotes the field of knowledge of a department, or such part thereof as constitutes a separate and independent division of that field. For a master's degree a major is at least half the work, or a minimum of four units, for one year. Less than one unit may not be counted as satisfying the requirements of a minor without the approval of the department concerned.

Foreign Language.—The ability to use one or more of the modern languages ordinarily studied in the undergraduate curriculum is desirable for all candidates for the master's degree, and in some lines of study is required. No student will be permitted to acquire residence toward the second year for the doctorate until he has passed the preliminary examination in at least one of these languages.

Master's Thesis.—Each candidate for a master's degree is required to present two copies of a thesis on some subject approved by the professor in charge of his major work. Such approval, except in case of students working for masters' degrees in summer sessions only, must be secured and the subject of the thesis filed at the office of the Graduate School not later than the beginning of the second half-year of residence. Students working for masters' degrees exclusively in summer sessions must announce their thesis subjects not later than the beginning of their third session in residence. The requirement of a thesis may be waived, however, on the recommendation of the professor in charge of his major work and the approval of the Dean, *provided application to waive the thesis is made at the time for announcing thesis subjects.* A student excused from writing a thesis must replace it with courses of instruction. Both copies of the thesis in its final form, together with a certificate of approval by the proper officer, must be left at the Dean's office at least two weeks before the date on which the degree is to be conferred. No article prepared for another use, or previously published, will be accepted as a thesis.

Second Degrees in Engineering

Two classes of second degrees are open to graduates of the College of Engineering, namely, academic and professional.

The *academic* second degree in engineering is Master of Science, following Bachelor of Science, in civil engineering, electrical engineering, etc. This degree is conferred in accordance with the regulations described above for *academic work in residence only*.

The *professional* second degrees in engineering are as follows:

- Master of Architecture, after B.S. in architecture.
- Architectural Engineer, after B.S. in architectural engineering.
- Ceramic Engineer, after B.S. in ceramic engineering.
- Chemical Engineer, after B.S. in chemical engineering.
- Civil Engineer, after B.S. in civil engineering or in railway civil engineering.
- Electrical Engineer, after B.S. in electrical engineering or in railway electrical engineering.
- Mechanical Engineer, after B.S. in mechanical engineering or in railway mechanical engineering.
- Engineer of Mines, after B.S. in mining engineering.
- Engineer-Physicist, after B.S. in engineering physics.

Professional degrees in engineering may be conferred on two classes of candidates: (1) those who have received an academic degree in engineering from the University of Illinois; (2) those who have received an academic degree in engineering, including chemical engineering, from other institutions of equal standing and who have been members of the teaching or research staff of the College of Engineering or Engineering Experiment Station or the Department of Chemistry of the University of Illinois for at least three years prior to the conferring of the professional degree.

A candidate declares his candidacy by filing with the Dean of the College of Engineering, as chairman of the committee in charge, a detailed statement covering his professional engineering experience. This statement must be made on a standard

form supplied by the Dean of the College of Engineering, as chairman of the committee in charge, and must be filed not later than the first Monday in November preceding the commencement at which the candidate expects to receive the degree. No statement of experience will be considered by the committee which does not show that the candidate has had a minimum of four years of acceptable engineering experience after receiving the degree of Bachelor of Science, and that for at least three years he has been in responsible charge of engineering work. Responsible charge in engineering teaching may be considered as responsible charge of work. In determining the acceptability of the engineering experience of the candidate the committee will be guided by the character of his professional work and the degree of responsibility involved, and will take into consideration such evidences of professional ability and growth as may be shown by his investigation of engineering problems, his contributions to technical literature, and his membership and activity in engineering societies.

If the professional experience of the candidate is accepted he must submit for approval, prior to December 31, an outline of his proposed thesis. The completed thesis, in the form prescribed in the "Instructions for the Preparation of Masters' and Doctors' Theses," must be deposited with the Dean of the College of Engineering not later than May 1. The candidate must present himself at commencement in order to receive the degree.

A candidate for a professional engineering degree must pay the incidental fee of twenty-five dollars on being notified that his professional experience is accepted as qualifying him to enter as a candidate for the degree. No one will be enrolled as a candidate for the degree at the following commencement who does not pay his fee at this time. When a candidate for a professional engineering degree has once been accepted and paid his fee, he is eligible to receive the degree at any time within five years, without additional fee, on completion of the requirements; provided, however, that unless he completes the requirements within two years his name will be dropped from the list of candidates and in order to receive the degree within the five-year period he must register once more.

The Degree of Doctor of Philosophy

Major and Minor Subjects.—A member of the Graduate School who desires to become a candidate for the degree of Doctor of Philosophy is required to pursue a major subject in the department in which his research lies. He is also required to choose one minor subject, or he may choose two. If one minor only is chosen it must be taken in a department of study other than that of the major, and credit for it may be earned by work representing not less than four units, or one-sixth of the total residence required for the doctorate. If two minors are chosen, one must be a subject closely related to the major. With the approval of the adviser and the Dean it may be a division of the major field of study. The other minor (not less than two units) must, in that case, be taken in a department of study other than that of the major. Except by special permission of the Dean the preliminary examination in major and minor subjects may not be taken until the minor work has been done.

Method of Computing Residence.—Credit for a full year of graduate work means that the student has during that time devoted all his working time and energy to study of a graduate grade. After the first year of residence, credit is not recorded in units, and there is no fixed correspondence between credit and courses as in undergraduate work.

Period of Study.—The normal *minimum* period of study required for securing the degree of Doctor of Philosophy is three years, during which the student is required to devote all his working time to his studies. All three years must be spent in resident graduate study at some accredited educational institution and either the first two or the last one of the three must be spent at the University of Illinois. The degree is conferred, however, not for residence during a certain period, but for scholarly attainments and power of investigation, as proved by a thesis and examinations. For study in summer sessions, see page 198.

Work Done in Other Universities.—Credit for graduate work done in other universities is not "transferred." However, it may be accepted on examination as equivalent to resident work at the University of Illinois, provided the institution in which it was done is of high standing.

Examinations in Languages.—The student will be required to demonstrate his ability to read French and German and other languages needed in his work. (In special cases the Executive Faculty, on recommendation of the student's adviser, may substitute for either one of the languages usually required some other language which can be shown to be more useful in that student's professional research.) No student will be permitted to acquire residence towards the second year of graduate study until he has passed the examination in at least one of these languages. Both the examination in French and that in German must be passed before the student is admitted to the preliminary examination in his major and minor subjects. For the dates of these language examinations consult the calendar at the beginning of the Graduate School Announcement, which also shows the date when application for admission to these examinations must be made.

Examinations in Major and Minors.—Towards the end of his second year of study, or by special permission, at the beginning of his third year (not later than about October 15), a student who wishes to become a candidate for the degree must submit to a preliminary examination conducted by a committee appointed by the Dean. This examination is intended to test the student's knowledge of the fields of his major and minor subjects of study and to determine whether he is prepared for the final year of work for the doctorate. It is partly oral, and may be wholly so. The student will not be admitted to his preliminary examination until the faculty is satisfied that he has finished substantially the equivalent of two years' graduate work. He must do a full year's graduate work between his preliminary examination and the completion of his work for the doctorate.

Final Examination.—At least two weeks before the time when the degree is conferred, the candidate must submit to a final examination, given by a committee appointed by the Dean. This examination is primarily on the research work of the student, as embodied in his thesis, but it is not confined to that. It extends to the whole field of study of the candidate. It will not be confined to the courses which the candidate has attended in the University of Illinois only, if he has done part of the work elsewhere; nor even to the field covered by the courses specifically taken in this or other universities; but will be so conducted as to determine whether the candidate has a satisfactory grasp of his major subject as a whole, and a general acquaintance with the fields of knowledge represented by his course of study.

The final examination may not be divided. The examination must be taken all at one time even though it requires several sessions.

If after having passed his preliminary examination, he fails in the third year of his study to meet the expectations of the professors in charge of his work, or in any way fails to maintain the standard of scholarship and power of research expected of him, he may be refused admission to the final examination.

Other Examinations.—Before the candidate is admitted to the final examination and the defense of his thesis, he may be required to take any other examination, oral or written, that is thought proper by the various departments in which he has studied.

The above examinations are in addition to those in the courses for which the student is registered. These must be taken at the time for which they are set in the examination schedule.

Thesis.—The power of independent research must be shown by the production of a thesis on some topic connected with the major subject of study. The candidate is expected to defend his thesis or dissertation before the members of the faculty, or as many of them as may wish to question him about it, in connection with his final examination.

The subject of the thesis should be chosen not later than the end of the second year of residence and must be submitted for formal approval by the faculty not later than six weeks from the beginning of his third year of residence.

Two typewritten copies of the complete thesis, *the original on thesis paper* (no other will be accepted by the Dean), and the first carbon on plain paper of approximately the same weight, and in final form, must be deposited in the office of the Dean for presentation to the examining committee not later than two weeks prior to the final examination and not less than four weeks before the time when the degree is conferred. At the same time, the candidate must deposit with the Dean a manuscript of the essential part, or an abstract, or a digest of his thesis, in condition for publica-

tion at a cost not to exceed seventy-five dollars (\$75). The manuscript must be sufficient to show the method followed, the evidence used, and the conclusions reached in the investigation, and must bear the approval of the department and the Executive Faculty of the Graduate School.

The candidate must pay to the Comptroller before graduation the sum of seventy-five dollars (\$75) out of which the University will print at least one hundred copies of this manuscript for circulation by the University, unless the thesis entire or in abbreviated form is published by the author or is accepted for publication by a standard journal or publisher within a year from the date of graduation. In the latter event, and after one hundred copies have been presented to the University by the writer, the cash deposit shall be returned to him.

The typewritten and printed forms of the thesis must comply with the regulations given in "Instructions for the Preparation of Masters' and Doctors' Theses," copies of which may be obtained at the Dean's office.

The Doctor's Degree in Engineering

The degree of Doctor of Philosophy in Engineering is offered in certain lines of academic work of a high scholastic type in engineering science for students who wish to prepare themselves as teachers, investigators, and experts. The general requirements for this degree, as to preliminary education, linguistic attainments, etc., are the same as in other subjects.

The following lines of engineering science, or others approved by the Graduate School, may be elected as majors:

Engineering mechanics	Masonry construction and structural
Steam engineering	engineering
Hydraulic and sanitary engineering	Coal-mining engineering
Electrical engineering	Ceramic engineering
Heating and ventilation engineering	Chemical engineering
Railway engineering	

The first minor may be any of the above or one of the following sciences or an authorized combination of two of them:

Theoretical mechanics	Geology
Mathematics	Physics (experimental or mathematical)
Thermodynamics	Zoology
Bacteriology	Botany
Chemistry	Economics

The second minor should be in other than engineering subjects.

Agricultural and Engineering Experiment Stations

Attention is called to the unusual opportunities for graduate study in connection with the Agricultural and Engineering Experiment Stations. By undertaking a line of graduate study in close association with some one of the projects carried on in those Stations, the student will come into contact with aspects of his specialty which he would rarely touch in a purely academic study, and he will thus broaden his outlook. The Experiment Stations make available apparatus, equipment, and the services of mechanics, which may materially facilitate the carrying on of investigations.

Scholarships, Fellowships, and Assistantships

A number of scholarships and fellowships have been established by the Trustees of the University open to candidates who are not over thirty years of age at the time when the appointment is to be made. To first-year graduate students of ability and promise there are open a number of scholarships with stipends of \$300 and carrying exemption from the payment of tuition, incidental, and laboratory fees. There are two classes of fellowships—University Fellowships and Honorary Fellowships. The first are open to second-year and third-year graduate students with stipends of \$500 and \$600, respectively. To be eligible for a \$600 fellowship an applicant must have passed both language examinations before the date for filing applications and must be prepared to take the preliminary examination in his major and minor subjects by the following June. Honorary Fellowships carry no stipends and no exemption from the payment

of fees. Their purpose is to give recognition to superior students who are not in need of financial assistance.

Application must be made on blanks to be obtained from the Dean of the Graduate School. These application forms should be sent to the Dean of the Graduate School as early as possible in February of the academic year preceding that for which the fellowship is desired. No application will be considered if received later than February fifteenth, until after April fifteenth, the date when appointees from the first list of applications must accept or refuse their appointments.

Nominations to fellowships are made on the grounds of worthiness of character, scholastic attainments, and promise of success in the principal line of study or research to which the candidate proposes to devote himself.

Carr Fellowship in Chemistry.—The Honorable Robert F. Carr, of the class of 1893, gave in 1919 the sum of ten thousand dollars, the income of which is to be used as the stipendium of a fellowship in chemistry or chemical engineering.

Research Graduate Assistantships in the Engineering Experiment Station.—The Engineering Experiment Station is devoted to the study of problems of special importance to engineering and to manufacturing, railway, mining, and industrial interests, and the stimulation and elevation of engineering education. Approximately fourteen research graduate assistantships with a nominal stipend have been established, open to graduates of approved technical schools and universities. Applicants to whom these graduate assistantships are awarded agree to hold them for two years, devoting one-half their time to the work of the Engineering Experiment Station. At the end of this period, if all requirements have been met, the degree of Master of Science will be conferred. Several additional assistantships are usually maintained by industrial organizations. Applications for graduate assistantships should be made to the Director of the Engineering Experiment Station not later than March 1.

The Illinois Historical Survey

Professor THEODORE CALVIN PEASE, Ph.D., Director

The Illinois Historical Survey is a department of the Graduate School established in 1910 to conduct research in the history of the State of Illinois. It possesses extensive collections of source materials for western history and is continually adding to them. It assisted the Illinois State Historical Library in the publication of these and other materials in the *Illinois Historical Collections*. It offers to graduate students direction in the preparation of theses or monographs based on its collections.

Further information is contained in the Graduate School bulletin issued annually.

Department of Military Science and Tactics

MILITARY TRAINING IS REQUIRED UNDER THE FEDERAL and state laws. There are six units of the Reserve Officers' Training Corps at the University of Illinois organized under the Acts of Congress of June 3, 1916, and June 4, 1920. Military training helps to develop those qualities of leadership which make for success in life. The training is designed primarily as a part of the program of national defense, but in addition it has decided educational value. It develops loyalty, patriotism, the habit of obedience to law, respect for authority, coordination of mind and body, initiative and self-assurance, and the ability to lead men.

All male students, unless specifically exempted under University rules, must register in military training, and, unless properly excused, must take the full basic course, whether they intend to graduate or not. If credit is to be counted toward graduation, the full basic course of two years must be completed. The students exempted may take military work, if they so desire, by registering for it, except that no student who is not a citizen of the United States and no student who holds a Reserve Corps Commission or certificate therefor, will be permitted to register.

Exemptions

- (a) Students over 22 years of age when entering the University.
- (b) Students entering the University with junior standing.
- (c) Students who are not citizens of the United States.
- (d) Students who have had two years of military work in other Senior Units of the R.O.T.C.
- (e) Students holding Commissions in the Reserve Corps, United States Army, or certificates of eligibility for such commissions.
- (f) Students who are found physically disqualified to perform the military work, such disability to be certified by the University Health Officer.
- (g) Students who have completed their first year in the University and have been certified by the Director of Athletics to be members of a varsity athletic squad may be exempted on petition to the Dean of Men.

The courses cover four consecutive years of work. The basic course consists of the first two years, and students in this course are required to devote three periods a week of not less than one hour each to military training; the completion of this work is for them a prerequisite for graduation. One hour is prepared work, and two hours are used for drills. For each semester of work one hour of credit is granted.

The final two years are called the advanced course. Students who have completed the basic course may elect the advanced course and, if selected by the President of the University and the Professor of Military Science and Tactics, they will be eligible to sign the contract with the Government to pursue the course for two years for which they will receive the payment of commutation of rations provided by law. Students of the advanced course are required to devote five hours a week to military science and training for the two years, and the completion of this work is for them a prerequisite for graduation; they are also required to attend one summer camp of six weeks duration. From the beginning of the advanced course until the conclusion, except for the time spent in camp, such students receive commutation of rations at a rate determined by the Secretary of War; the rate at present is 25 cents a day. At camp, rations in kind are furnished and payment of 70 cents a day is made to each student. For each semester of work in the advanced course, students receive $1\frac{1}{2}$ hours credit toward graduation. Students who have been members of senior units of the Reserve Officers' Training Corps at other institutions and who have completed the basic course requirement may take advanced work, provided they present certificates signed by the Professor of Military Science and Tactics under whom they served, indicating that they have satisfactorily completed the required course in military science.

A student who completes the advanced course and is recommended by the President of the University and the Professor of Military Science and Tactics is eligible for

appointment by the President of the United States as a reserve officer of the United States Army. Students who complete the basic course of the first two years are eligible for appointment as sergeants in the enlisted reserve corps of the United States Army.

Military instruction is under the direction of officers of the United States Army. The advanced courses have special reference to the duties of officers.

The equipment for military instruction is furnished by the War Department and includes: for Infantry, magazine rifles, automatic rifles and pistols, machine guns, trench mortar, and 37 mm. guns; for Field Artillery, eight French 75 mm. guns (horse-drawn), eight French 75 mm. guns with high-speed traction for motorized battery, twenty-four motor vehicles, one 155 mm. Howitzer (Schneider), engineer and signal equipment, ninety horses, harness and saddle equipment; for Cavalry, sixty horses with full field equipment, rifles, pistols, sabres, automatic rifles, and machine guns; for Engineers, engineer instruments used for military sketching, surveying, and making of maps, demolition equipment, map reproduction and photographic equipment, tools and supplies for field fortification, and bridge material; for Signal Corps, radio telephone and telegraph instruments, field telephones, heliographs, flags, wire-carts, storage batteries, etc.; for Coast Artillery (anti-aircraft), three 75 mm. field guns mounted on motor trucks, two motor trucks, two 155 mm. guns (Filloux), etc. Ammunition and supplies for demonstrations and practice are furnished. Students in each arm of the service are given instruction in the functions and equipment of the other arms.

The Cadet Brigade consists of an Infantry regiment, two Field Artillery regiments, a Cavalry regiment, one regiment of Engineers, one Signal Corps regiment, and a regiment of Coast Artillery. The training is directed by army officers of the appropriate arm of service. Within the limits of available facilities a student is free to choose any branch for which his aptitude and course of study fit him. Appointments as cadet officers are made on the nomination of the Professor of Military Science and Tactics, confirmed by the President of the University.

Each year the President of the University recommends certain members of the senior class to the Governor of the State for commissions as brevet captains in the Illinois National Guard. Candidates must be members of the graduating class in college and the advanced course in military studies; must have served at least two semesters as commissioned officers in the brigade; and must be recommended by the Professor of Military Science and Tactics as having good reputations as scholars, officers, and gentlemen.

The Summer Session

THE SUMMER SESSION, A TERM OF EIGHT WEEKS, PROVIDES numerous courses substantially equivalent to those given during the first and second semesters of the academic year. A complete list of the courses offered by each of the departments at Urbana appears in the Summer Session Announcement which is issued annually. Students may register for courses aggregating eight hours credit or less.

The Summer Session of 1939 opened on June 19 and closed August 12. The Summer Session of 1940 will open on June 17 and close August 10.

One purpose of the Summer Session is to meet the needs of teachers in the public schools who wish to spend part of the vacation in serious study or investigation. Numerous courses are designed for high school teachers, supervising officers, teachers of special subjects, directors of physical education, and coaches of athletic teams; graduate courses are offered for college instructors, school supervisors, and principals who are working for advanced degrees.

Students who have just graduated from an accredited high school may matriculate in the Summer Session and obtain credit for a half-semester.

Admission *in regular status*, to courses for which credit is granted toward a degree, is limited to students who could be regularly admitted to the colleges of the University in which they would be registered in the winter sessions (see page 68). *Unclassified students, not candidates for a degree*, may be admitted under the regulations stated on page 75.

A student who transfers from another college or university must present a letter of honorable dismissal and a transcript of record from the institution previously attended.

Fees.—All fees are due on registration. An incidental fee of \$20 (\$30 in the College of Law) is required of students who are residents of Illinois, and of \$30 (\$45 in the College of Law) for students who are not residents of this state. This entitles one to admission to regular courses and special lectures. A laboratory fee is charged in some courses for materials used. Any single course, counting not more than two and one-half credit hours, may be taken by Illinois students for a fee of \$10 (\$15 for students not residing in the state), and the laboratory fee, if there be any. Additional fees are required for practice courses in music.

Scholarships.—All high school teachers in Illinois, and all other teachers in the state who can matriculate in the University, are entitled to Summer Session scholarships of \$12, reducing the incidental fee from \$20 to \$8. Similar scholarships are granted to librarians and assistants employed by Illinois libraries and to persons under appointment to such positions; also to persons (otherwise qualified) who are under contract to teach in the state during the coming year. To matriculate in the University, one must pass the entrance examinations or present a certificate from an accredited high school or other evidence of having completed the required amount of preparatory work. Scholarship application blanks may be obtained from the Registrar of the University.

Graduate Work.—Emphasis is placed on graduate courses leading to the master's degree. The departments related to high school teaching and to educational administration have been made the centers of this emphasis. The graduate offerings vary from year to year so that advanced students each year may find acceptable work in their fields. The normal requirement for the master's degree is full work of graduate grade, satisfactorily completed, through one year of residence, or a residence of thirty-six weeks at the University. Qualified graduate students may fulfill this residence requirement in four summer sessions of eight weeks each. Candidates for the degree of Doctor of Philosophy may obtain residence credit during the Summer Session. For further information concerning regulations and requirements for advanced degrees, the circular of announcements of the Graduate School should be consulted.

Demonstration School.—A demonstration school at the second grade level will be open for observation and research in connection with summer session classes.

Athletics.—Both the men's and the women's gymnasiums are open (when not in use by regular classes) to students for general recreation and exercise. A small locker fee is charged. The tennis courts, general athletic fields, and golf courses of the University are open to students.

Lectures and Entertainments.—General lectures, open to the public, are given by members of the faculty. Musical entertainments include band concerts, organ recitals, and song services under the direction of the School of Music. Debates, teachers' conferences, receptions, dramatics, and other entertainments are arranged.

For further information, including a list of courses offered, address the Director of the Summer Session.

COURSES OFFERED AT URBANA

EXPLANATION

THE following list of courses offered at Urbana in 1939-1940 (including the summer session of 1939) is arranged alphabetically by names of departments. The courses offered by each department are listed numerically in groups with headings to indicate the students for whom they are designed. The description of each course shows its content or purpose, the terms during which it is offered, its credit value, and the staff members conducting it. Special requirements for admission to certain courses are introduced by the word *prerequisite*. Courses not given in the current year are enclosed in brackets.

Terms of the year are represented by symbols: "S" for the summer session, "I" for the first semester, and "II" for the second semester. Courses extending through both semesters are designated as "continuous through I and II."

Names of staff members in each department are listed by rank and by seniority of appointment within each rank, except the head of the department who is listed first. In descriptions of courses the names of persons teaching in the summer but not in the first or second semester are enclosed in parentheses with the symbol "S."

Credit for undergraduate students is counted in *semester hours*. A semester hour represents the work of one classroom period of fifty minutes each week through one semester, or the equivalent in laboratory or field work. In descriptions of courses the credit values are shown in parentheses: for example, "(3)" meaning three hours of credit each semester. Undergraduate students are classified by years according to the following table of minimum requirements in the several colleges and schools:

	Semester Hours		
<i>Requirement for graduation</i>	120	130	136
Senior standing.....	88	94	99
Junior standing.....	56	60	62
Sophomore standing.....	27	30	30

Credit for graduate students is counted in *units*. A unit course requires approximately ten hours of time each week through one semester, irrespective of the distribution of that time in class work, laboratory or field work, and private study. Four such courses constitute a student's normal program for one semester. In descriptions of courses for graduates the unit values are stated in parentheses. Courses in the intermediate groups, which are open to advanced undergraduates as well as to graduates, generally are evaluated for graduate credit as follows:

- (a) 1 unit for a 5-hour or 4-hour course, and $\frac{1}{2}$ unit for a 3-hour, 2-hour, or 1-hour course, to which senior standing is prerequisite.
- (b) $\frac{1}{2}$ unit for a 5-hour or 4-hour course, and $\frac{1}{4}$ unit for a 3-hour, 2-hour, or 1-hour course, to which junior standing is prerequisite.

Some courses have variable credit, as 3 to 5 hours or $\frac{1}{2}$ to 2 units. In registering for a course with variable credit, each student puts on his study-list the number of hours or units for which he intends to take the course.

NOTE:—It is not the purpose of this catalogue to announce offerings for the future. Prior to the date for registration of students each semester, the University publishes a *Time Table of Courses Offered at Urbana*, copies of which may be obtained from the Information Office in the Administration Building. The *Announcement of the Summer Session* is published in the spring of each year, copies being distributed by the Director of the Summer Session. Special circulars announcing courses are issued also by most of the colleges and schools of the University and by the Division of University Extension. A pamphlet on *University Training for the Public Service* (copies obtainable from the Registrar) calls attention to the facilities offered by the University for preparation in many lines—technical, professional, and administrative—for positions in the national, state, and local governments.

CHEMICAL ENGINEERING:

Professors: KEYES, JOHNSTONE.

Associate Professors: SWANN, STRAUB.

Assistant Professors: COMINGS, DEEM.

Assistants: SILCOX, LANGDON, MICHELS, BRIGGS.

For curricula in chemistry and chemical engineering, see pages 115-116.

For special requirements for admission to graduate work, see page 229.

Major: 20 hours in chemistry, excluding Chemistry 1, 2, 3, 4, 5, 6, 7a, 8a, 8b, and including courses in qualitative, quantitative, and organic chemistry. At least five hours must be taken from the advanced group.

Minors: 20 hours chosen from not more than two of the following: bacteriology, botany, ceramic engineering, entomology, geology, mathematics, philosophy, physics, physiology, psychology, and zoology. At least eight hours must be taken in each subject, if two are chosen.

Restrictions.—With the exception of students in the College of Engineering and the College of Agriculture, registration of students in chemistry courses (other than Chemistry 1, 2, 3, 4, 5, 6, 7a, 8a, 8b) is restricted to those having a grade-point average of at least 3.5 in all subjects, exclusive of the basic courses in military training and the required work in physical education and hygiene, and an average of at least 3.5 in chemistry courses. Transfer students to be admitted must have a corresponding record in the institution from which they transfer and must maintain a similar average at the University of Illinois.

Sequence of Courses.—Students in the curriculum of chemistry, majors in chemistry, and all others who desire a thorough training in the fundamentals of chemistry and their applications to modern life, should select courses from the following, and usually in the sequence given: Chemistry 1 or 2, 6, 10, 24, 34, 36, 37, 40, 41, 42, 43, 50, and courses in the chemical engineering, sanitary chemistry, and miscellaneous groups. Students in the curriculum of chemical engineering who have had a thorough training in preparatory chemistry may be able to shorten the time spent in the foundational courses by taking the sequence Chemistry 8a, 8b, 24, 34, 36, 37, 40, 41, 42, and other advanced courses. Students in the College of Engineering (except ceramists, ceramic engineers, and those who desire to take Chemistry 40) should register in Chemistry 3 or 2, 4, 22.

Students who are compelled to meet chemical requirements briefly may register for the following sequence: Chemistry 1 or 2, 5, 22, 32 or 33. Students who find it impossible to take more than one semester's work are requested to register in Chemistry 1 or 2 in the second semester rather than in the first.

Honors.—Students registered in Chemistry 90a or 90b are eligible for honors without examination. All other students in the chemistry or chemical engineering curriculum or majors in chemistry who have a 4.0 average or better are eligible to become candidates for honors, provided they signify their intentions in writing to the Head of the Chemistry Department during the senior year and not later than at the beginning of the second semester. Such students must pass a comprehensive examination to be given about May 1. Chemical engineers may offer, in place of this examination, the solution of an assigned problem in plant design.

Courses for Graduates

NOTE:—Students who intend to take graduate work for an advanced degree in chemistry or chemical engineering should include in their undergraduate preparation at least the equivalent of one full year of physics, one year of French, one year of German, and mathematics through differential and integral calculus. Any student without the necessary physics or mathematics may enter the Graduate School but will be required to spend part of his time in residence to remove the deficiency. Without one year of college work in French or German (German preferred), no student will be admitted to the Graduate School as a candidate for an advanced degree in chemistry or chemical engineering.

At the time of applying for admission to the Graduate School, each prospective student should notify the Head of the Chemistry Department, stating the degree for which he wishes to study and the field of specialization. Neglect to do this may result in a delay before the student can begin his research, because of the limited space in the laboratories, or may make it impossible for him to continue his work for the Ph.D. degree. See regulations concerning research under Chemistry 190a-190b.

Candidates for an advanced degree in chemistry or chemical engineering must have had the equivalent of 25 semester hours in chemistry, properly distributed.

Candidates for the A.M. or M.S. degree with a major in chemistry or chemical engineering must include among their courses Chemistry 40 and 41, or must have had the equivalent.

Candidates for the Ph.D. degree in any branch of chemistry must include among their courses Chemistry 40, 41, 42, and 43, or must have had the equivalent.

Candidates for the Ph.D. degree with a major in chemical engineering must have had undergraduate training comparable to that offered in the chemical engineering curriculum at the University of Illinois. They must include among their courses Chemistry 40, 41, 42, and 44a, or must have had the equivalent.

Graduate students whose major subject is in some department other than chemistry, before taking chemistry courses for graduate credit, must have had the equivalent of fifteen semester hours in chemistry, and the ground covered should include satisfactory work in general chemistry and in qualitative and quantitative analysis and elementary organic chemistry. Such students are advised to make selections from the following courses: Chemistry 40, 41, 42, 43, 27, 36-37, 50, 60a, 15b, 16b, and 29b. Courses of a more special nature will not as a rule, be accepted for graduate work unless preceded by one of the courses above.

Those who intend to take a first minor in chemistry or any branch of chemistry toward the Ph.D. degree must include among their courses Chemistry 40 and 41, or must have had the equivalent.

It may not be used as a prerequisite for advanced courses in economics except as indicated.

The courses in economics may be grouped in several rather distinct fields in which students may find it profitable to concentrate in their junior and senior years. Courses for Graduates

NOTE:—Students who wish to make economics their major subject for an advanced degree must have had at least 27 hours of undergraduate work in social science, 15 of which must have been in economics; the work in economics must include a course in principles of economics, a course in statistics, and other courses for which the course in principles is a prerequisite. Students in other departments who wish to take a minor in economics must have had at least twelve hours in social science, eight hours of which must have been in economics, consisting of a course in principles of economics and other courses for which the course in principles is a prerequisite. Students who cannot meet these requirements may register for graduate work but, unless specially exempted for reasons satisfactory to the adviser in charge, must remove any deficiencies during the first year of residence by taking prescribed courses without graduate credit.

A first-year student whose major is economics must take either Economics 101 or 103 throughout the year. If a minor is taken outside the department, two units of work will ordinarily be required. Undergraduate courses that are approved for graduate credit may be taken in lieu of graduate courses but not to exceed a total credit of two units.

A student who wishes to become a candidate for the Ph.D. degree with a major in economics must pass a preliminary examination showing: (1) a detailed knowledge of economic theory and its history; (2) a detailed knowledge of certain special fields of economics (which may include agricultural economics), the number and selection of which is to be determined by the adviser in consultation with the student; and (3) a general acquaintance with the subject matter and bibliography of other branches of economics. If a student offers work in some related field outside the department he will be expected to satisfy the examiners as to his proficiency in that subject.

A student who chooses economics as a minor for the Ph.D. degree must take at least two units of work in this department.

Courses for Graduates

NOTE:—Graduate work in history presupposes two years of college work in this subject, or sixteen semester hours, which should include courses in European and American history equivalent to History 1a-1b and 3a-3b. Linguistic preparation, especially in French and German, is important. For medieval history some knowledge of Latin is essential, and Spanish is useful for certain fields.

Graduate courses in history are of three kinds: (1) information and guidance in

general reading; (2) instruction in methodology, historiography, and bibliography; (3) seminars for the study of special fields with a view to training in methods of historical criticism and research.

Graduate students have an opportunity to pursue research in connection with the Illinois Historical Survey, an organization carrying on systematic studies in the history of Illinois.

Each candidate for a master's degree in history ordinarily is required to pass a general written examination early in the year and is expected to devote special attention to two of the following fields: ancient history, medieval history of continental Europe, modern history of continental Europe, English history, American history, Latin-American history, the Near East, the Far East. All candidates are expected to have a general knowledge of historical method (see course 103) and a working knowledge of one foreign language, ordinarily French or German.

A candidate who selects history as his major subject for the Ph.D. degree should prepare himself for examination in four of the following fields, stating the particular field in which he wishes to specialize and in which his thesis is to be written: ancient history, medieval history of continental Europe to 1300, continental Europe from 1300 to 1648, continental Europe and its dependencies since 1648, England and its dependencies, the United States, Latin America, the Near East, and the Far East. Any one of these fields may also be used as a first minor; one of the minors, however, must be chosen from subjects offered by other departments, such as political science, economics, sociology, philosophy, education, and departments concerned with the history of literature.

Courses for Graduates

NOTE:—Students beginning graduate study with a major in mathematics must have had twenty hours of undergraduate work in mathematics besides the usual freshman courses in algebra, trigonometry, and analytic geometry, including a one-year course in calculus and one year of more advanced work in one or more of the fields of algebra, analysis, and geometry. They should be able to read German or French.

Candidates for a Ph.D. degree taking a first minor in mathematics are expected to have completed a course in calculus and are required to take two one-year courses beyond the calculus. Those taking a second minor are required to complete at least one course throughout a year beyond the calculus.

The more technical courses offered by the department are arranged mainly in cycles of two or of three years, so that a properly qualified student will usually have opportunity to take any particular course at some time during the three years of residence required for a doctor's degree.

A graduate with a degree in music from an institution which holds membership in, or is listed by, the Association of American Universities, or from a liberal arts college recognized by the North Central Association or equivalent regional accrediting association, will be admitted without a qualifying examination.

A candidate who holds a bachelor's degree from an independent conservatory or school of music will be considered under the following conditions: (1) The degree must be based on a four-year curriculum in music. (3) The applicant must pass a qualifying examination in the branch of music which he wishes to pursue as his major field in graduate study, given under the supervision of the Director of the School of Music.

For the degree of Master of Music, the major field may be in musicology, music theory and composition, music literature, or band and orchestra conducting. For the field of musicology, a reading knowledge of both German and French is highly desirable.

COLLEGES IN CHICAGO

PROFESSIONAL TRAINING qualifying graduates for the practice of Medicine, Dentistry, and Pharmacy is offered by the Chicago colleges of the University. The work of these colleges is centralized in the Medical and Dental College Laboratories Building, facing on Polk, Wood, and Wolcott Streets, with additional facilities in the College of Pharmacy Building at 715 South Wood Street. In addition to large laboratories for class work, there are numerous small, well-equipped laboratories designed for individual research projects. The library consists of two large reading rooms with more than 50,000 volumes and an extensive list of medical periodicals.

The Department of Public Welfare of the State of Illinois has constructed an extensive group of hospitals and institutes adjoining the buildings of the University and has made a cooperative agreement by which additional facilities for teaching and investigation are afforded to the faculty of the College of Medicine. The units now in operation include the Research Hospital, the Out-Patient Dispensary, the Illinois Surgical Institute for Children, the Neuropsychiatric Institute, and the Institute for Juvenile Research.

The Research Hospital, with provision for 400 beds, connects directly with the class rooms and laboratories and has been designed for teaching and investigation. The Out-Patient Dispensary, which occupies the main floor of this hospital, possesses adequate and comfortable waiting rooms, suitable suites for all divisions of clinical work, electrocardiographic and hydrotherapeutic units, and rooms for preparing and dispensing drugs. The Dispensary is divided into twelve departments: medicine, surgery, urology, obstetrics, gynecology, pediatrics, orthopaedics, otolaryngology, dermatology, ophthalmology, neurology, and roentgenology. At present the number of treatments is limited to about 170,000 per year.

Active teaching is also being conducted at the present time in the following institutions: the Cook County Hospital, the Municipal Contagious Hospital, the Augustana Hospital, and the St. Luke's Hospital. The Chicago Board of Health is providing facilities for the study of public health problems, and a number of students are constantly in attendance at their various clinics. Except in the above listed cases, students do not find it necessary to leave the campus for their clinical work.

Intramural sports under a trained director are encouraged. Facilities and equipment are available for soft ball, touch football, horseshoes, tennis, archery, fencing, and ping pong, and arrangements have been made with the two nearby Y.M.C.A.'s for swimming, badminton, basketball, and handball. Swimming for the women is available at the Y.W.C.A. The cement tennis courts are flooded to provide for ice skating in the winter.

The students have also had a large musical organization for a number of years. Numerous formal and informal concerts have been given by the concert orchestra, the dance orchestra, the men's glee club, and the women's glee club. All students are invited to try out for these activities.

The College of Medicine

1853 West Polk Street, Chicago

THE COLLEGE OF MEDICINE opened its doors on October 14, 1881, as a proprietary medical school known as "The College of Physicians and Surgeons of Chicago." It first became affiliated with the University of Illinois in 1897, the name was officially changed in 1900 to "The College of Medicine of the University of Illinois," and in 1913 all the property and the stock of the old institution were transferred to the University.

For the *faculty* of the College of Medicine, see page 44; for *admission*, see pages 77 and 79; for *honors*, see page 85; for *fees*, see pages 104 and 105.

Courses Offered at Urbana

Attention is called to the fact that the University at Urbana offers the student his choice of the following combinations:

(1) *An eight-year curriculum*—three years in the College of Liberal Arts and Sciences at Urbana, followed by five years in the College of Medicine in Chicago. Students taking this course are permitted, at the end of their first year in the College of Medicine, to transfer credits in the medical sciences to complete the requirements for graduation of the College of Liberal Arts and Sciences, and receive the degree of Bachelor of Arts or Bachelor of Science. On completion of the first two years in the College of Medicine, students may receive the degree of Bachelor of Science, and on the completion of the remaining two years in the College of Medicine and the interne year they receive the degree of Doctor of Medicine.

(2) *A nine-year curriculum*—four years in the College of Liberal Arts and Sciences at Urbana, leading to the degree of Bachelor of Arts or Bachelor of Science, followed by five years in the College of Medicine in Chicago, leading to the degree of Doctor of Medicine.

Advanced Standing

Because of the limitations of space, the membership of each class is strictly limited. Applications for admission with advanced standing to any class will not be considered until vacancies are certain to occur. In case there are vacancies to be filled preference will be given to those applicants who are residents of Illinois and who present the strongest records. In general, the administration can not determine definitely whether there will be vacancies, or the number of vacancies, until the day of registration. No student who is on probation at, or who has been dropped for any reason from, a college of medicine will be considered for admission.

Requirements for Graduation

For the Bachelor of Science Degree.—A student must have secured passing grades in all the courses of the first two years in the College of Medicine and have earned grades of 75 per cent ("C") in at least three-fourths of the total hours in the courses of these two years.

For the Certificate in Medicine or the Bachelor of Medicine Degree.—On the completion of four years in attendance at an approved medical school, of which at least the last year must have been at the University of Illinois, the completion of the prescribed curriculum, and the passing of the comprehensive examinations required at the end of the fourth year, the student is awarded a Certificate in Medicine, or if he wishes to pay the additional fee of \$10.00, he may elect to take the degree of Bachelor of Medicine.

For the Doctor of Medicine Degree.—To receive the degree of Doctor of Medicine, the student, after having qualified for the Certificate in Medicine (see preceding statement), must complete satisfactorily a course of not less than twelve months duration in a hospital approved by the University of Illinois,¹ or a year of research work

¹See Medical Practice Act of the State of Illinois, Senate Bill No. 439, approved June 30, 1923.

acceptable to the University. He must also have shown evidence of good moral character and have paid all indebtedness to the University.

Plan of Instruction

The program of the student during his five years in the College of Medicine is arranged according to the following plan:

During the first two years the work is confined mainly to the fundamental sciences, and the time of the student is largely spent in the laboratory. During the first year he studies anatomy, histology, embryology, neurology, chemistry, and physiology. In the second year the study of physiology is continued, and in addition the student takes up bacteriology, pathology, laboratory diagnosis, pharmacology, physical diagnosis, and hygiene.

Throughout the first two years there is definite correlation between the clinical and the pre-clinical courses. A regular schedule of lectures by clinical instructors is followed in the courses in anatomy, physiology, and physiological chemistry, to give the student an understanding of the practical applications of the fundamentals which he is studying. An organized program of study in psycho-biology is followed throughout the four years.

During the third and fourth years the time is devoted to the various clinical branches, emphasis being given to practical instruction in dispensary and hospital clinics. In the dispensary the student examines the cases personally under the guidance of instructors. He is required to make laboratory examinations pertaining to his own cases. Such examinations as the Wassermann reaction are made by the instructors in the laboratory, but the student has opportunity to follow and repeat these and to learn the technique involved.

Throughout the third year emphasis is laid on the acquisition of a thorough knowledge of clinical problems. There are didactic quiz courses in surgery, medicine, pediatrics, obstetrics, urology, orthopaedics, and otolaryngology. In addition to these didactic courses the students attend clinics in each field and spend a large amount of time in the dispensaries (surgery, otolaryngology, obstetrics, and orthopaedics). They also spend a minimum of three hours per day for eight weeks in the wards of the Research Hospital and the Cook County Hospital, learning the fundamentals of diagnosis and treatment.

In the fourth year the class is divided into two sections; the students in each section attend clinics and lectures during one semester and work in dispensaries and laboratories and on clinical clerkships during the other semester. Each student is required to spend two full weeks, living in quarters specified by the University, on call for twenty-four hours per day for the obstetrical out-patient service. During this clerkship two students are called for each delivery in the Research Hospital and to attend each delivery supervised through the out-patient service.

All students have experience in the following dispensaries in the fourth year: dermatology, gynecology, medicine, neurology, ophthalmology, pediatrics, roentgenology, and urology. They also work in the general "Admitting Clinic" of the Research Hospital and spend three weeks in the laboratory, making the common practical tests for dispensary patients. Each student serves a one-week clerkship in the Municipal Contagious Hospital, observing and studying the common contagious diseases. Clerkships are also conducted in the Orthopaedic and Psychiatric Institutes. There is also a four-week surgical clerkship including individual work in wards and operating rooms.

In the third year the student must elect two hours per week in each semester. In the fourth year, five and one-half hours per week of elective work must be taken, at least one hour of which must be in surgery. This elective work of the third and fourth years may be either in pre-clinical or clinical subjects. A student may in this way emphasize his training in some particular field. The elective work may be counted for graduate credit provided the student qualifies as required by the Graduate School.

The examinations at the end of the second and fourth years are of a comprehensive nature and may be either written or oral, or both.

The fifth year consists of twelve months of interne service in a hospital approved by the University. During the fourth year the students apply to the hospitals in which they wish to serve as internes and, if successful, sign contracts for the service desired. Research work may be substituted for the hospital work of the fifth year.

Significance of Grades.—The percentage system of grading is used, and 70% is the passing grade. Where it is necessary to translate percentage to literal grades the following values are used: "A," 92 to 100%; "B," 85 to 91%; "C," 75 to 84%; "D," 70 to 74%.

Scholarships and Loan Funds

Rea Scholarships.—Through the generosity of the late Professor R. L. Rea, four scholarships each year, awarded by the officers of the faculty, are provided for worthy students.

Theodore B. Shnitzer Memorial Scholarship.—An annual award of \$100 has been made available to a needy Jewish student who ranks in the upper half of his class and who has completed at least one year in the College of Medicine. The scholarship is awarded by a committee of the faculty.

Charles Spencer Williamson Memorial Scholarship.—The income from a fund donated to the University by Members of the faculty of the College of Medicine as a memorial to the late Dr. Charles Spencer Williamson, Professor and Head of the Department of Medicine, is to be used as a scholarship for a worthy and needy student, the award being made by the Dean of the College and the Head of the Department of Medicine.

(For circulars giving more detailed information concerning scholarships, apply to the Registrar of the University, Urbana.)

Loan Funds.—A number of loan funds have been established for the benefit of worthy students who are in need of financial aid in order to finish their courses in the University. For more detailed information, apply to the administrative office of the college.

Lectureships and Prizes

In commemoration of members of the alumni, faculty, and student body who lost their lives during the World War, the alumni, faculty, and students have raised a fund sufficient to establish a Memorial Lectureship. At least one lecture is delivered annually by a prominent educator on a subject of general medical interest.

In accordance with the will of Mrs. Albertina Gehrmann, widow of Dr. Adolph Gehrmann, for many years Professor of Bacteriology and Hygiene in the College of Medicine, the sum of \$10,000 was given for the establishment and support of a lectureship in memory of Dr. Gehrmann.

In 1927, when Dr. Charles S. Bacon, on reaching the retiring age, was made Professor of Obstetrics, *Emeritus*, members of the faculty and friends of Dr. Bacon contributed the sum of \$5,000 to found the Charles S. Bacon Lectureship in Obstetrics. The income from this fund is used to defray expenses of lectures given each year at the College of Medicine.

The Chicago Tuberculosis Institute has established in the College of Medicine the Theodore B. Sachs Residency in the field of tuberculosis and allied diseases. In 1938 a grant of \$1,000 per year for five years was made.

In 1938 the Phi Beta Pi medical fraternity contributed a fund to establish an annual lectureship in honor of Dr. Carl Hedblom, who until his death was Professor and Head of the Department of Surgery.

The late Dr. Frank Smithies, of Chicago, endowed an annual prize in memory of William Beaumont, the famous surgeon of the nineteenth century who made valuable contributions to the knowledge of the digestive system. The prize is awarded by a committee appointed by the Dean of the College of Medicine to the student or faculty member of the College of Medicine who submits the best original work on diseases of the alimentary tract.

A prize of \$100, established by Dr. and Mrs. H. O. Deuss as a memorial to their son James Burkett Deuss, is given in alternate years for the best contribution in the field of allergy by any registered student or member of the faculty of the College of Medicine.

The student is introduced to medicine through four correlation courses, which are essentially extensions of those begun in the pre-clinical years. Thus in one, the physiological and biochemical laws of nutrition are applied to patients with various diseases; in two others, the physiology of the circulation as it is modified by cardiac failure and the cardiac arrhythmias is considered; and finally the pathological changes in the morphology of the blood are studied.

Through the individual study and examination of patients in the hospital wards and out-patient clinic the student learns the elements of physical diagnosis and the art of history taking. He also learns to recognize the physical findings characteristic of various diseases. In his fourth year he serves as a practicing physician to whom patients come for consultation on their problems.

These basic approaches to medicine are amplified and extended by didactic quiz courses, by lecture and demonstration clinics, and by numerous small clinics covering completely and authoritatively the field of medicine.

The instruction aims to establish an objective view of human behavior under conditions of health and illness, founded on biologic principles. There is therefore

close coordination with instruction in physiology. During the first two years, instruction is given in the biologic principles of behavior, chiefly didactic and required reading, but illustrated with case material. In the third year, pathologic modifications of behavior are studied by lecture methods and in connection with clerkships on the medical wards. Class work in surgery is begun in the second semester of the second year, and consists of an informal introductory and quiz course covering such problems as surgical bacteriology, infections, and wounds. Work of the third year includes a formal didactic course and a clerkship in Cook County Hospital; eight weeks in the dispensary, taking histories and examining patients whose cases are discussed with the student by the staff men, and in several clinics which are designed to acquaint the student with clinical material. In the fourth year still more effort is made to have the student take care of patients and get acquainted with various methods of surgical care. A four-week ward clerkship at Illinois Research Hospital is designed to present the clinical material in this way. During the fourth year the student is allowed considerable liberty in outlining his own study, and is encouraged to refer to current literature and textbooks about the clinical material as it is presented in the various clinics and clerkships.

The College of Dentistry

808 South Wood Street, Chicago

THE COLLEGE OF DENTISTRY has existed as an organic part of the University of Illinois since 1913. It was founded in 1892 as a proprietary institution, the Columbian Dental College. After a partial reorganization in 1898, it became known as the Illinois School of Dentistry. Its first affiliation with the University was made in 1901, at which time it was named the School of Dentistry, University of Illinois. In 1905 the name was changed to the College of Dentistry, and in 1913 the University assumed complete control.

For the *faculty* of the College of Dentistry, see page 54; for *admission*, see pages 77 and 78; for *honors*, see page 85; for *fees*, see pages 104 and 105.

Buildings

The College of Dentistry occupies with the Colleges of Medicine and Pharmacy a block of buildings fronting on Wood, Polk, and Wolcott Streets, in the heart of the west side medical center of Chicago; adjoining these are the buildings of the Research Hospital. The facilities of all the colleges are available to students in the College of Dentistry, as the colleges are allied and the faculties are associated.

Infirmaries

Since a large part of the third and fourth years is devoted to the supervised practice of dentistry by students, ample clinical space is provided on the fourth, fifth, sixth, seventh, eighth, ninth, twelfth, and thirteenth floors. Instead of massing all departments in one large infirmary, each clinical department has its infirmary on its own floor. This makes possible more satisfactory lighting for each chair, reduces noise and confusion, and makes for greater efficiency in teaching than was possible under the old plan. The clinical equipment has been especially designed and is modern in character throughout.

General Plan of Instruction

The course of instruction leading to the degree of Doctor of Dental Surgery is based on sixty hours of credit earned in an accredited college of liberal arts and sciences. Sixty hours are required in order that the student may have the background and training which will enable him intelligently to enter upon and complete a comprehensive course in dentistry. The advance of knowledge in both medicine and dentistry during the last few years has made necessary many changes in the dental curriculum in order that students may be prepared to practice a profession which is an integral part of health service. The new responsibilities imposed on the profession by the recognition of the systemic relations and implications of oral disease demand of the practitioner a knowledge of the fundamental sciences which can not be acquired without at least two years of thorough and systematic preparation.

The inclusion of physics and organic chemistry in the pre-dental course releases more hours during the first two years of the dental course for the biological sciences, and during the last two years for medical subjects necessary to enable the student to grasp the systemic connections of oral disease, and to incorporate this conception in the practice of dentistry.

The first two years of the curriculum include courses in physiological chemistry, anatomy, histology, physiology, bacteriology, and pathology presented by members of the staff of the College of Medicine. At the same time instruction in dental technique is given with emphasis on the comprehension of principles rather than on the number of technical units completed.

Actual clinical practice is continuous throughout the third and fourth years, accompanied by courses in diagnosis and medicine which enable the student to correlate oral and systemic diseases. The inclusion in entrance requirements of so much fundamental science and the reduction of hours of technique leave more time available for clinical practice.

During the third year the student is admitted to the infirmaries and begins clinical operations on patients; in the fourth year the emphasis is on diagnosis, with due consideration of systemic involvements, and on the management of the patient by the student from the time the patient enters the diagnostic clinic until he is discharged from the infirmary.

Each year more hospitals are establishing dental internships. Graduates of the College of Dentistry are urged to take advantage of these opportunities for gaining experience before entering on private practice, and every effort is made to assist graduates in securing such positions.

Admission to Advanced Standing

Should there be vacancies in upper classes, students who meet the requirements for admission to the University of Illinois and who have studied dentistry for not less than one year in any college accredited to the University of Illinois, may be admitted to advanced standing. Such students, however, will be required to comply with all the requirements of the curriculum of the College of Dentistry. Complete credentials, including a letter of honorable dismissal, are required of any applicant who has previously attended a dental school.

Graduates of colleges of medicine accredited to the University of Illinois may be admitted to the College of Dentistry and given credit for one year in time and for all satisfactorily completed courses which are required by the College.

Requirements for Graduation

The degree of Doctor of Dental Surgery is conferred on students who have completed the curriculum, as summarized on the following page, with a grade of not less than "C" in at least three-fourths of the work leading to the degree, and who have settled all obligations to the University.

The degree of Bachelor of Science in Dentistry is conferred on students who have completed the first two years of the curriculum in Dentistry with a grade of not less than "C" in at least three-fourths of the work leading to the degree, if, prior to admission to the College of Dentistry, they have completed two full years of work (60 semester hours) in a recognized college of liberal arts and sciences with credits distributed as follows: 12 hours in chemistry (including 4 hours in organic chemistry), 6 hours in physics, 8 hours in biology, 6 hours in English, 6 hours in German, French, Spanish, or Italian, 6 hours of electives (excluding chemistry, physics, and biology), and 16 hours of free electives.

Significance of Grades.—The literal system of grading is used, and "D" is the passing grade. Where it is necessary to translate percentage to literal grades, or vice versa, the following values are used: "A," 92 to 100%; "B," 85 to 91%; "C," 75 to 84%; "D," 70 to 74%. For calculating averages, the point system is used, with values as follows: "A" equals 5; "B," 4; "C," 3; "D," 2.

The College of Pharmacy

715 South Wood Street, Chicago

THE COLLEGE OF PHARMACY was originally the Chicago College of Pharmacy and was incorporated under that name September 5, 1859. The first class, of two students, was graduated in 1861. The college was formally united with the University on May 1, 1896, becoming then the School of Pharmacy of the University of Illinois, and in 1932 the name was changed to the College of Pharmacy. It is located in the great medical center of Chicago. At present it is largely housed in the Medical and Dental College Laboratories Building, although the office of the dean, the library, and some laboratories are still located in the Pharmacy Building at 715 South Wood Street. The library contains more than 6,000 volumes, including many rare books on pharmacy and complete files of the leading pharmaceutical journals.

For the *faculty* of the College of Pharmacy, see page 57; for *admission*, see pages 77 and 81; for *honors*, see page 85; for *fees*, see pages 104 and 105.

Advanced Standing

The University will accept scholarship and time credits for work done in schools of pharmacy having standards equal to those of the College of Pharmacy of the University of Illinois, in so far as this work coincides with or is the full equivalent of the courses prescribed by the University. The applicant must present a letter of honorable dismissal from, and be eligible for promotion in, the school in which he has pursued his pharmaceutical studies and must comply with the requirements for such promotion in the University of Illinois.

Requirements for Graduation

The candidate for the degree of Bachelor of Science in Pharmacy must meet the following requirements:

- (1) He must show evidence of good moral character.
- (2) He must have paid all indebtedness to the University.
- (3) He must have successfully completed the prescribed courses, of which at least the last year must have been at the University of Illinois.
- (4) He must have secured grades of not less than "C" in subjects aggregating at least three-fourths of the work taken in the College of Pharmacy and required for the degree.

Summary of Curriculum

The curriculum comprises four years of college work, of which the first year is administered as a pre-pharmacy year of work in a recognized college or university and consists of not less than thirty semester hours as specified for admission. The second, third, and fourth years are arranged as shown in the following outlines. The minimum number of semester hours required for the B.S. degree is 134.

State Registration

To register as a pharmacist in Illinois one must either pass the examination given by the State Department of Education and Registration, or register by reciprocity with another state. Illinois reciprocates with forty-three states on the basis of presentation of a diploma from a recognized school of pharmacy and registration by examination in any one of these states.

The Illinois pharmacy law requires that a candidate for the certificate of registered pharmacist be of the age of twenty-one years or over, of good moral character and temperate habits, a graduate from a school of pharmacy recognized by the State Department of Registration and Education, and must have had four years experience in pharmacy. Actual time of attendance at a recognized school of pharmacy, but not to exceed two years, will be allowed on the four years experience required by law.

THE DIVISION OF UNIVERSITY EXTENSION

THE DIVISION OF UNIVERSITY EXTENSION was organized by act of the Board of Trustees in 1933 for the purpose of extending some of the services of the University to persons away from the campus. The services now offered are: (1) undergraduate courses taught by correspondence; (2) extramural classes in graduate and undergraduate courses; (3) speech aids service; (4) visual aids service; (5) science aids service.

STAFF

ROBERT BELL BROWNE, Ph.D., Director of the Division of University Extension
LEWIS VINCENT PETERSON, A.M., Executive Clerk and Supervisor of Visual Aids Service
ALFRED DWIGHT HUSTON, A.M., LL.B., Supervisor of Speech Aids Service
LOUIS ALEXANDER ASTELL, M.S., Supervisor of Science Aids Service

Courses Taught by Correspondence

Correspondence courses, equivalent to those offered to undergraduate students in residence at the University, are open to applicants who can meet the University entrance requirements, and also to persons eighteen or more years of age whose applications are approved by the Director of the Division of University Extension.

The courses are conducted by members of the faculty of the colleges and schools of the University, not by a separate staff. The instruction is individualized to meet the needs of each student. Enrollments may be made at any time in the year, and the rate at which a student progresses through a course is not fixed. Normally a course must be completed within twelve months, and it may not be completed in less than six weeks.

No student may take more than three correspondence courses at one time.

The tuition fee in all courses taught by correspondence is \$5.00 per semester hour of credit. Additional charges are made in a few courses in which special materials are used. If a student fails to complete a course within twelve months from the date of enrollment, he may, upon the payment of an additional fee of \$5.00, obtain an extension of six months.

A final examination, proctored by some person approved by the Director, is required in each course for which the student desires University credit.

Credit earned by correspondence courses in which the student has received grades of "C" or higher may be applied toward meeting the requirements for graduation from the University, as provided in the regulations stated on page 82.

The following is a list of the courses offered by correspondence, as of January 1, 1940. These courses are equivalent to those listed with the same numbers for resident students. Extramural Courses

Extramural courses for credit in the Graduate School were first offered in September, 1936, when a course in Education was begun at Carbondale and a course in Civil Engineering was begun in Chicago. The courses conducted during the school year of 1939-1940 are shown in the following list.

The classes are in charge of regular members of the faculty and are equivalent to courses listed with the same numbers for students in residence at the University. The duration of each course is approximately one semester.

A person may be admitted to these courses as a regular student, as a special student, or as a visitor. The fees for all persons enrolling is the same, \$25.00 per unit course, \$15.00 per half-unit course, or \$5.00 per semester hour of undergraduate credit. The regulations concerning admission, credit, grades, examinations, etc., for resident students in the Graduate School apply to students taking extramural courses for graduate credit.

It is planned to increase the number of such courses, so that students may earn a master's degree by extramural work. For further information address the Director, Division of University Extension, 354 Administration Building (West), Urbana.

Speech Aids Service

The Speech Aids Service, established in 1935, is operated by the Division of University Extension as headquarters for the Illinois High School Speech League. This Service assists the League in conducting its program of contests and festivals, and sponsors the state final contest and festival held annually at the University.

A speakers' bureau is operated by the Division of University Extension for the purpose of handling requests from organizations and individuals desiring to make arrangements for lectures by members of the University faculty. In connection with this service the University Extension Lectures Bulletin, containing the names and subjects of faculty lecturers, is available. For further information address the Supervisor, Speech Aids Service, 354 Administration Building (West), Urbana.

Visual Aids Service

The Visual Aids Service was established in 1932 to promote the use of visual materials in Illinois schools by building a library of educational films and slides. In 1935 it was made a part of the Division of University Extension.

The library of visual materials contains 500 subjects on 16-millimeter silent film, 200 subjects on 16-millimeter sound film, and more than 50 sets of glass slides. No film of the 35-millimeter size remains in the library, as this width of film is becoming obsolete for classroom use.

The old method of obtaining the loan of films under a cooperative plan had to be abandoned in 1937 as it was unsuited to most users. The new plan of lending films is on a direct rental basis; reductions are made for large orders of films.

The Service invites schools to call on it for assistance in setting up programs of visual instruction or for information and advice concerning any problem relating to this field. A catalog of the films and slides will be sent on request. All correspondence should be addressed to the Supervisor, Visual Aids Service, 1206 West Springfield Avenue, Urbana, Illinois.

Science Aids Service

The Science Aids Service was organized in 1939 to cooperate with the Junior Academy of Science movement and to make available for instructional use many excellent teaching materials which schools can now obtain only with difficulty.

The Science Aids Service is now engaged in collecting charts, pamphlet specimens from various sources which, it is hoped, can be assembled into kits and circulated among interested instructors.

All correspondence should be addressed to the Supervisor, Science Aids Service, Visual Aids Building, 1206 West Springfield, Urbana, Illinois.

EXTENSION SERVICE IN AGRICULTURE AND HOME ECONOMICS

UNDER the provisions of the Smith-Lever Act, approved by the President of the United States on May 8, 1914, and of subsequent acts, and under the terms of acceptance by the State of Illinois, the University is cooperatively responsible for a demonstration service designed to combine the results of scientific research with approved practices on the farms and in the farm homes of the state. This demonstration service is carried on by the Extension Service in Agriculture and Home Economics of the College of Agriculture in two ways: (1) cooperation in the employment of farm and home advisers under a memorandum of agreement with the county farm and home bureaus; (2) employment of extension specialists in agriculture and home economics to assist the farm and home advisers in the preparation and presentation of useful material and in the carrying out of organized and approved extension programs in their respective counties, as well as in the training of local leaders to aid in this work.

SHORT COURSES AND CONFERENCES

EACH YEAR the colleges and schools at Urbana conduct numerous short courses and conferences, some of them in cooperation with business and industrial organizations and other groups in Illinois. Members of the faculty provide instruction in the short courses and contribute by lectures, demonstrations, and discussions to the programs of the conferences. Following is a list of the conferences and short courses offered by the various colleges and schools.

College of Agriculture

Farm and Home Week (January 9-13, 1939).—The program for Farm and Home Week is especially arranged to meet the needs of farmers and home makers who can spend but a few days at the University. Lectures and discussions are offered each year in agricultural economics, agricultural engineering, rural organization and community development, agronomy, animal husbandry, beekeeping, dairy husbandry, forestry, home economics, and horticulture. There are no entrance examinations or fees.

Tractor and Gas Engine Short Courses (January 23-28, and January 30-February 4, 1939).—The Department of Agricultural Engineering each year conducts several one-week short courses on farm tractors and gas engines. Eight hours a day are spent on lecture and laboratory work on the operation, care, adjustment, and repair of tractors. Ignition, magnetos, carburetors, transmission systems, clutches, and lubrication systems are studied. Only a limited number can be accommodated, and a fee of \$2.50 is charged. Announcement is made through the agricultural papers in December, and those desiring admission should write to the Department of Agricultural Engineering.

Dairy Manufactures Conference (November 13-17, 1939).—The Department of Dairy Husbandry conducts each year a conference in dairy manufactures. The subject matter covers various phases of dairy bacteriology, dairy chemistry, the manufacture and marketing of ice cream, fluid milk and cream, butter, cheese, condensed milk, and cultured milk drinks. This conference is planned primarily for experienced dairy plant workers, managers, and technicians, but others may attend. A registration fee of \$1.00 is charged. Each registrant receives a bound volume containing the lectures presented during the conference. Write to the Department of Dairy Husbandry for further information.

Ice Cream Manufacturers' Short Course (February 28-March 3, 1939).—A four-day course in the manufacture of ice cream and other frozen dairy products is given each year by the Department of Dairy Husbandry. The course includes lectures and demonstrations on the testing of dairy products; the mixing, freezing, and marketing of these products; causes for defects in frozen dairy products; and efficient plant operation. A registration fee of \$1.00 is charged. Each registrant is given a bound volume of the lectures presented during the course. Write to the Department of Dairy Husbandry for further information.

Conference on Air Conditioning.—First offered in 1936, and repeated in March, 1939.

Conference on Surveying.—The second annual conference was offered in March, 1939.

Electric Metermen's Short Course.—Offered in April, 1939, by the Department of Electrical Engineering in cooperation with several power companies in the state. For a number of years prior to 1930 this short course was held each year in cooperation with the Illinois Electric Association.

Sewage Works Operators' Short Course.—Held in March, 1939. Sponsored by the State Department of Public Health and the Department of Civil Engineering.

High School Visitor

High School Conference (November 2-4, 1939).—The High School Conference, under the direction of the High School Visitor, has been held annually at the University of Illinois since 1905. This conference deals with problems in the field of secondary education, including the junior high school and junior college, and is especially planned to be of interest both to teachers and school administrators. The All-State Chorus and the All-State Orchestra and the Art Exhibit are held each year as a part of the Conference. In addition to general session programs, provisions are made for conferences of the various sections dealing with problems related to subject-matter fields, administration and supervision, and the supervision and guidance of secondary school pupils.

Fine and Applied Arts

Community Planning Conference.—For the past seven years the Bureau of Community Planning, in conjunction with the Illinois State Planning Commission and similar agencies, has conducted an annual Community Planning Conference. Led by persons prominent in the planning profession, these conferences are participated in by civic officials, planners, and laymen. The sessions are open and free to all interested. From 1931 to 1938 the conferences were held on the campus at Urbana, and the 1939 conference was held at Springfield.

Fire College (June 13-16, 1939).—The Department of Architecture, cooperating with the Illinois Firemen's Association, offers four days of training in ways and means of saving human lives and reducing the great loss resulting from fire. Discussions and demonstrations in first aid and rescue work, safety measures, hydraulics, mechanical equipment, inspections, and other preventive measures. This work is of value to industry, institutions, building managers, city officials, watchmen, and firefighters.

School of Journalism

State Press Conference.—For twenty years an all-state press conference has been held annually on the campus, usually in conjunction with the annual meeting of the Illinois Press Association. The 1940 Conference will be held at the time of the seventy-fifth anniversary convention of the State press association. Non-member papers are welcome at the conference.

Short Course in Country Journalism.—At the request of officers of three press groups a new series of short courses in country journalism was begun in 1938. The courses are held in the spring at a location convenient to the country editors. The 1939 meeting was held in Springfield and the 1940 meeting will be held in Chicago.

Illinois Daily Newspaper Conference.—The School assists members of the daily newspapers in arranging conferences and special interest meetings from time to time. It has had a part in annual meetings of Associated Press Editors of Illinois, United Press Editors of Illinois, Illinois Daily League, and Inland Daily Press Association. The next meeting especially for daily papers will be in the fall of 1940.

ACCOUNTANCY EXAMINATIONS

BY A LAW passed in 1903, the University was entrusted with the examining of applicants for the certificate of Certified Public Accountant. To carry out the provisions of the law, the Board of Trustees appointed a board of three examiners to prepare, conduct, and grade examinations, and a University committee to conduct the routine work. The law prescribed that one examination must be held each year in May, but examinations have been held also in November or December of each year in which there were sufficient applicants.

Applicants for the certificate of Certified Public Accountant have been required to pass examinations in the theory of accounts, commercial law, auditing, and practical accounting.

The Illinois Society of Certified Public Accountants has offered annually a gold medal and a silver medal to be awarded, respectively, to the persons passing the C.P.A. examination with the highest total marking in all subjects, and with the second highest total marking in all subjects.

EXPERIMENT STATIONS AND RESEARCH BUREAUS

THE AGRICULTURAL EXPERIMENT STATION

BY AN ACT OF CONGRESS, approved March 2, 1887, the National Government appropriated \$15,000 a year to each state for the purpose of establishing and maintaining, in connection with the colleges founded upon the congressional act of 1862, agricultural experiment stations "to aid in acquiring and diffusing among the people of the United States useful and practical information on subjects connected with agriculture, and to promote scientific investigation and experiment respecting the principles and applications of agricultural science." Under this provision the Agricultural Experiment Station of the University of Illinois was founded in 1888 and placed under the direction of the Trustees of the University.

Federal grants are received annually as follows: \$15,000 provided under the Hatch Act approved March 2, 1887; \$15,000 provided under the Adams Act approved March 16, 1906; \$60,000 provided under the Purnell Act approved February 24, 1925. The appropriation provided under the Bankhead-Jones Act, approved June 29, 1935, was \$86,736.52 for the fiscal year 1939-1940. This is an aggregate of \$176,736.52 and is supplemented by state appropriations of approximately \$420,000.

Investigations

Investigations are being conducted by the Station in the improvement and economic production of crops and the mechanics of curing and storing them; the growing of fruits and vegetables; the growing of flowers under glass; methods of livestock production; principles of animal breeding and nutrition; the production and manufacture of dairy products; the control of plant and animal diseases, the adaptation of power and machinery to farm and farm-home operations; the development of buildings particularly suitable to Illinois conditions; the checking of soil erosion and the most satisfactory methods of tile drainage; the economical organization of different types of farms; and the application of principles of economics to agricultural problems, particularly to those of marketing. The great basic problem of maintaining and increasing the fertility of the soils of Illinois is being studied in the laboratory and in experimental fields located on different types of soil over the state. All but a few counties have been covered by the detailed soil survey.

The results of investigation are published in bulletins, which are issued in editions of 3,000 to 10,000 and distributed free of charge.

Much of this work is of interest to students, especially of graduate grade, and it is freely available for this purpose so far as is consistent with the interest of the Station.

THE ENGINEERING EXPERIMENT STATION

THE ENGINEERING EXPERIMENT STATION is an organization in the College of Engineering, created by the Board of Trustees of the University on December 8, 1903, to stimulate engineering education and to investigate problems of importance to professional engineers and to manufacturing, railway, mining, and

¹Beginning February 1, 1940.

²Beginning February 9, 1940.

³First semester.

⁴On leave of absence.

other industrial interests. The knowledge thus obtained is published in bulletins, circulars, and reprints.

Control is vested in an executive staff composed of the Director and his assistant, the heads of departments of the College of Engineering, and the Professor of Chemical Engineering. This staff is responsible for the establishment of the general policies of the Station, including approval of material presented for publication. The research is conducted chiefly by the research corps composed of full-time research professors and assistants, research graduate assistants, and special investigators. Those employed for special investigations are engaged for a limited time on a single problem.

The University normally maintains fourteen research graduate assistantships in the Station. In addition, several other assistantships are usually maintained by industrial organizations, the number varying from year to year. These assistantships are open to graduates of approved universities and technical schools who are prepared to undertake graduate study in engineering, physics, or applied chemistry. These assistantships carry a nominal stipend and exemption from tuition, incidental, and laboratory fees in courses that count for graduate credit. Appointment must be accepted for two consecutive collegiate years, at the expiration of which, if all requirements have been met, the degree of Master of Science is conferred. Not more than half of the time of these assistants during ten months of each year is required in connection with the work of the department to which they are assigned; the remainder of their time is available for graduate study. Further details concerning the research graduate assistantships will be supplied on request by the Director of the Engineering Experiment Station.

The Station has published 317 bulletins, 39 circulars, and 15 reprints. All these publications are regarded as contributions to the literature of engineering, and many as important additions to the science of engineering.

Cooperative Investigations

In addition to research conducted with University funds, cooperative investigations have been undertaken with funds supplied by outside agencies which are interested in special problems of industry. In such investigations, the University reserves the right to control the results secured and to publish them. The funds for such cooperative investigations are paid to the University and are administered by it for the special purposes for which they are provided. The following important cooperative investigations are in progress:

- (1) Stresses in railroad track, in cooperation with the American Society of Civil Engineers and the American Railway Engineering Association.
- (2) Warm Air furnaces and furnace heating systems, in cooperation with the National Warm Air Heating and Air Conditioning Association.
- (3) Solubility studies of boiler waters, in cooperation with the Utilities Research Commission, Inc.

- (7) Rails investigation, in cooperation with the Association of American Railroads and the Rail Manufacturers Technical Committee.
- (8) Summer cooling, in cooperation with the American Society of Heating and Ventilating Engineers, the National Warm Air Heating and Air Conditioning Association, and others.
- (9) Pressures in granular materials, in cooperation with an anonymous donor.

- (10) Reinforced concrete slabs, in cooperation with the Public Roads Administration of the Federal Works Agency and the Illinois State Division of Highways.
- (11) The soundness of the Chicago region dolomites, in cooperation with the Illinois State Geological Survey and the Illinois State Division of Highways.

BUREAU OF BUSINESS RESEARCH

THE BUREAU OF BUSINESS RESEARCH, established in 1921, is carried on the University budget as a department of the College of Commerce and Business Administration. Its specific purposes are to study, and as far as possible to explain, the economic and industrial conditions in Illinois; to direct attention to tested practices of good business management; and to investigate methods for securing the best executive control of business. The Bureau is primarily a service organization, having about the same kind of relationship to business men as an agricultural experiment station has to farmers. Its work depends very largely upon cooperation with business men for the collection of data, and its method is chiefly statistical analysis. It never undertakes investigations for individuals for a fee. Its findings are published by the University in bulletins and circulars.

BUREAU OF COMMUNITY PLANNING

THE BUREAU OF COMMUNITY PLANNING, established in 1934, is operated as a department of the College of Fine and Applied Arts. Its purpose is to stimulate and promote public interest in community planning, to carry on research in this field, to make background surveys pertinent to intelligent planning of Illinois communities, and to summarize and bring to the attention of the people of the state the results of such research. The Bureau each year participates in a state-wide conference on community planning.

BUREAU OF EDUCATIONAL RESEARCH

WALTER SCOTT MONROE, Ph.D., Director

THE BUREAU OF EDUCATIONAL RESEARCH, established in 1918, is operated as a department of the College of Education. Research is carried on by members of the staff of the Bureau and also by graduate students who are working on theses for advanced degrees. It is the purpose of the Bureau to conduct original investigations in the field of education, to summarize and bring to the attention of school people the results of research done elsewhere, and to be of service to the schools of Illinois in other ways. The results of its original investigations are published in a series of bulletins, and its accounts of research conducted elsewhere, as well as general communications to the school men of the state, are published in a series of circulars, both series being issued by the University.

BUREAU OF INSTITUTIONAL RESEARCH

THE BUREAU OF INSTITUTIONAL RESEARCH was established in 1933 as a fact-finding agency directly responsible to the President of the University. Under the guidance of its advisory committee with the Provost as chairman, the Bureau studies the teaching, research, budgetary, and other aspects of University operation in their relation to one another, to educational policies and objectives, and to the social needs of the state. The results of a continuous internal appraisal of the operations of the University are made available to the President in special memoranda.

RELATED UNIVERSITY ORGANIZATIONS

THE UNIVERSITY OF ILLINOIS FOUNDATION

ORGANIZED IN 1935, the University of Illinois Foundation is an outgrowth of the Alumni Fund which had been begun about ten years previously. One project of the Alumni Fund was the completion in 1929 of Lorado Taft's "Alma Mater" statue, cast in bronze and located south of the Auditorium. Another project was the subscription in 1930 of \$5,000 which completed the endowment of the Taft Lectureship in Art. A third project was the establishment in 1932 of an emergency loan fund of \$4,000 for small loans to worthy students in the University.

The objectives of the Foundation may be summarized as follows: (1) to assist in developing the facilities of the University by encouraging gifts of money, property, works of art, etc., and by such other means as may seem advisable; (2) to receive, hold, and administer such gifts with the primary object of serving purposes other than those for which the State of Illinois ordinarily makes sufficient appropriations; (3) to act as the business agent of the Board of Trustees of the University in the performing of other services specified by them; and (4) to undertake such other enterprises as tend to promote the interests and welfare of the University.

The Board of Directors of the Foundation consists of eighteen members. Three of these are the President of the University, the President of the Board of Trustees of the University, and the President of the Alumni Association, who are ex-officio members during their terms of office. Three other members are selected from the Board of Trustees of the University, and the remaining twelve are elected, for terms of three years, by the executive committee of the Alumni Association.

THE ALUMNI ASSOCIATION

THE ALUMNI ASSOCIATION, which has been continuously active since 1873 as an auxiliary to the University, adopted its present constitution in 1913. The object of the Association is to encourage the continued interest of former students in one another and in the University, and to serve the University in every way possible.

The main offices in the Student Center, Union Building, adjoining the campus at Urbana, are well located to coordinate the work of the Alumni Association with student and faculty activities and to provide a convenient meeting place for visiting alumni. A branch office is maintained in the Medical and Dental College Laboratories Building on the Chicago campus of the University, especially for the graduates in Medicine, Dentistry, and Pharmacy.

All former students and all faculty members, past and present, are eligible for membership in the Association. The annual membership fee is \$3.00; life membership is \$100.

Government of the Association is in the hands of its members through the Alumni Council, which consists of all members attending its meetings, and through the officers and directors elected by the membership. Elections are held annually (by mail ballot), the officers to serve for one year and three directors to serve terms of three years each. Two candidates for each office are nominated by a committee of past presidents, and additional nominations can be made by any group of twenty-five members. The general secretary, elected annually by the directors, is in charge of the affairs of the Association and serves as editor of the magazine, *Illinois Alumni News*, which circulates monthly to all members. A staff is constantly employed to keep accurate and complete records of the addresses and other facts concerning former students, who number more than 140,000.

In matters concerning alumni relations the Alumni Association cooperates with the University of Illinois Foundation, the Athletic Association, and the Student-Alumni Association, as well as with the colleges, schools, and departments of the University.

THE ATHLETIC ASSOCIATION

THE ATHLETIC ASSOCIATION administers intercollegiate athletics, intramural, and all non-curricular recreational athletic activities at the University. Its government is vested in a board of seven directors who are appointed annually by the Trustees of the University on recommendation of the President of the University. Four directors are members of the faculty, and three are non-faculty members of the Alumni Association. The officers of the Association consist of a president, vice president, and secretary, who are elected annually by the directors from their own membership, and a treasurer and a business manager, who are also elected by the directors.

The funds of the Athletic Association are handled under regulations adopted by the Trustees of the University, and an annual budget of anticipated income and expenditures is submitted to the Trustees for approval. Sales of tickets for athletic events are audited by a representative of the Comptroller of the University, and an annual audit of the accounts of the Association is made by a public accountant approved by the Trustees.

STATE SCIENTIFIC SURVEYS

UNDER AN ACT OF THE GENERAL ASSEMBLY entitled "The Civil Administrative Code," in 1917, the functions and duties formerly exercised by the scientific surveys located at the University of Illinois were vested in divisions of the State Department of Registration and Education, with the proviso that they continue to be exercised at the University of Illinois. These divisions are the State Natural History Survey, the State Water Survey, and the State Geological Survey.

The State Board of Natural Resources and Conservation, acting through subcommittees composed of the Director of the Department of Registration and Education, the President of the University of Illinois or his representative, and one or more expert advisers especially qualified, decides all matters pertaining to these surveys, including research, investigational and scientific work, selection and appointment of the members of the scientific staff, cooperation with the University in the use of scientific staff and equipment, and cooperation with allied divisions and departments of the government.

STATE NATURAL HISTORY SURVEY DIVISION

AS NOW ORGANIZED under the Civil Administrative Code of 1917, the State Natural History Survey Division is a merger of the former office of State Entomologist of Illinois and the Illinois State Laboratory of Natural History. The latter organization originated in 1862 as the Museum of the State Natural History Society; this became in 1871 the State Museum of Natural History, which in 1877 was reorganized as the Illinois State Laboratory of Natural History. The office of State Entomologist was established by an act of the Legislature in 1867.

It is the duty of the Natural History Survey Division to make a complete survey of the biology of Illinois, giving preference to subjects of educational and economic importance and especially, under the latter head, to all insects injurious to agriculture or horticulture, to the truck farm and vegetable garden, to shade trees and other ornamental vegetation, to the products of mills and the contents of warehouses, and to insects injurious to the public health. The Survey is further required to make experiments for the prevention of insect injuries and to instruct the people of Illinois, by lecture, demonstration, and bulletin, in the

¹Deceased September 12, 1939.

best methods of protecting their property and health against injuries by insects, and to publish the product of its investigations in bulletins, circulars, and reports covering the entire field of zoology and botany in Illinois.

The publications to date are as follows: a bulletin series now in the twenty-first volume, containing 12,316 pages; eighteen entomological reports of 3,017 pages; two volumes of final reports on the birds of Illinois; one volume, together with an atlas, on its fishes; the first two volumes of a new educational series, *Fieldbook of Illinois Wild Flowers*, and *Fieldbook of Illinois Land Snails*; and numerous circulars and pamphlets on special topics. A list of the available publications will be sent on request.

The Survey has accumulated and permanently preserved for comparison and study large collections, particularly of Illinois material. The main insect collection consists of some 500,000 pinned specimens, 20,000 slide preparations, and 70,000 vials and bottles of material in alcohol. Other collections include some 145,000 fishes in alcohol and formalin, 32,000 fish scale samples, 60,000 mollusks, 28,000 specimens and 2,000 permanently mounted microscopic slides of fungous and bacterial plant parasites, a herbarium of 15,000 plant specimens exemplifying the Illinois flora, and many thousand bottles, vials, and packages of miscellaneous zoological and botanical material. A significant addition to the Survey material is the Charles Robertson collection of insects, acquired in 1940. This collection, assembled over a period of thirty years near Carlinville, consists of about 30,000 pinned specimens, including type specimens of over 200 kinds of Illinois insects. The Survey, in addition to actual specimens, has in its files thousands of records concerning the flora and fauna of Illinois.

The main offices and laboratories are housed in various buildings of the University at Urbana, and field stations are located at strategic points in the state. Entomological field stations are located at Des Plaines and Carbondale. Wildlife research facilities are maintained at Chautauqua Migratory Waterfowl Refuge, near Havana, at Fox Ridge State Park, near Charleston, and at Pere Marquette Wildlife Experimental Area and Migratory Waterfowl Refuge, near Grafton. A movable center of field operations in aquatic biology is located as the progress of the work requires.

Close cooperative relations are maintained with other survey divisions, the biological departments of the University, the Illinois Agricultural Experiment Station, and various conservational, biological, and agricultural bureaus or departments of the state and national governments.

STATE WATER SURVEY DIVISION

THE STATE WATER SURVEY DIVISION of the State Department of Registration and Education has succeeded to the duties of the Illinois State Water Survey, which was organized in the Department of Chemistry of the University in 1895. Offices and special laboratories are maintained in the Chemistry Building at Urbana.

A chemical survey of the waters of Illinois was begun by the State Water Survey in the latter part of September, 1895. In 1897 the Legislature authorized the continuance of the work and directed the Trustees of the University to establish a chemical and biological survey of the waters of the state. In 1911 the Legislature made an increased appropriation and imposed additional duties on the State Water Survey.

The Civil Administrative Code of Illinois (1917) directs that the State Water Survey Division, cooperating with other divisions, shall investigate and study the natural resources of the state; prepare printed reports and furnish information fundamental to their conservation and development; cooperate with similar departments of other states and the federal government; study the geological formations of Illinois with reference to its resources in mineral and artesian water; cooperate with the United States Geological Survey in the collecting, recording, and printing of data on water resources, including stream-flow measurements; collect facts concerning the volume and flow of underground and surface waters of the state; determine the mineral qualities of water from different geological formations and surface water for the various sections of the state; publish, from time to time, the results of its investigations of the mineral qualities, volumes, and flow of underground and surface waters, to the end that the available water resources of the state may be better known; make mineral analyses of samples of water from municipal or private sources; consider and decide all matters pertaining to water and water resources and allied investigational and scientific research; cooperate with the University in the use of scientific staff and equipment; and cooperate with the various departments in research, investigational, and scientific work useful in the prosecution of the work of any department.

Thirty-two bulletins and twenty circulars have been published by the State Water Survey, in which are reported its investigations of water resources of Illinois and methods for the treatment of water and of liquid wastes.

It publishes bulletins describing the state's geological and mineral resources, and topographic and geological maps. It serves the mineral industries, both directly and indirectly, in numerous fields. It cooperates with the United States Geological Survey in the preparation of a topographical map of Illinois, and with various departments and divisions of the state government requiring geologic and topographic information.

Publications include 64 bulletins, 1 monograph, 33 bulletins in the *Illinois Mining Investigations* series, 60 reports of investigations, 34 issues of *Illinois Petroleum*, and 3 reports in the educational series, as well as short excerpts, press bulletins, informa-

tion circulars, oil and gas drilling reports, and numerous drainage, topographic, structural, and geologic maps.

During the current year attention has been given to: the study of the coal resources of Illinois, through field studies and compilation of mine and drilling data; prosecution of fundamental research on coal, its constitution and its physical and chemical properties; investigation of improved uses for coal fines and commercially prepared coals; mapping of the structure of No. 6 coal bed in groups of southeastern and southwestern Illinois counties; demonstration of the commercial feasibility of the manufacture of smokeless briquets from Illinois coals authorized under House Bill 557; preparation of a report on potential markets for Illinois coal on the Upper Mississippi Waterway; study of areas known or thought to be favorable for production of oil and gas, including extreme southern Illinois; studies of repressuring and other methods of improved recovery and treatment of oil in the Illinois oil fields; scouting of drilling wells; preparation of eighteen development maps of active areas in Illinois oil fields; studies in the utilization of the limestones, sandstones, and shales of Illinois; fundamental laboratory investigation of the physical and chemical properties of Illinois clays; study of fluorspar, its properties and uses; preliminary report on molding sand and resources of northern Illinois; preparation of statistical report of Illinois mineral industry; geological problems encountered in highway construction; geologic conditions at sites for public dams, bridges, tunnels, parks, etc.; examination of well cuttings, interpretation of well logs, and correlation of strata encountered in deep borings; study of the geology of sub-surface water supplies; electrical resistivity surveys to locate buried deposits of water-bearing sand and gravel for municipal water supplies; paleontological and stratigraphic studies of the Cambrian, Ordovician, Silurian, Mississippian, Pennsylvanian, and Pleistocene systems; paleobotanical studies of the Pennsylvanian system; micropaleontological studies of the pre-Mississippian, Mississippian, and Pennsylvanian; preparation of a report on the geology of the Chicago region with maps; preparation of a preliminary edition subject to revision of the geologic map of Illinois; detailed study and mapping of the areal geology by quadrangles, each covering approximately 225 square miles; writing of educational bulletins; and furnishing of geologic information and advice to mineral operators, producers, and citizens of the State.

The year's topographic mapping program has been carried forward; mapping has been completed in the Freeport, Ina, Mulberry Grove, Cissna Park, and Fithian quadrangles and has been in progress in the Carmi, Mt. Carroll, Rose Hill, and St. Elmo quadrangles. Horizontal and vertical control was also extended into areas which will be mapped in the future.

LIST OF STUDENTS

EXPLANATION

THE FOLLOWING LIST includes in one alphabetic series the names of all students registered in the University of Illinois in the first and second semesters of the year 1939-1940 and in the preceding summer session (1939), except students enrolled only in courses taught by correspondence. The information is arranged in six columns showing (1) the student's name, (2) legal residence, (3) college or school, (4) curriculum or major, (5) classification, and (6) sessions attended. For students attending only the summer session, the information was obtained from their records as of June, 1939; for those attending the first semester or both the first and second semesters, it was taken from their records as of September, 1939; and for those attending only the second semester, from their records as of February, 1940. Students withdrawing within ten days after the date of registration for a session are not listed as in attendance for that session.

Names and Degrees.—In the first column, where the names are arranged in alphabetic order, the previous degrees are shown with dates of conferment.

Legal Residence.—In the second column, showing the legal residence for each student, all cities and towns are located in Illinois unless otherwise indicated.

College or School.—In the third column, indicating the student's enrollment in one of the colleges or schools of the University, abbreviations are used as shown in the list below on this page. Students in the colleges of Medicine, Dentistry, and Pharmacy are registered in Chicago, and all others are registered at Urbana except some graduate students who are enrolled in the Chicago departments. (See Classification.)

Curriculum or Major.—In the fourth column, abbreviations of curricula and major subjects are used as shown in the list on the following page.

Classification.—In the fifth column, classification of undergraduate students at Urbana is indicated as follows:

Fr.....Freshman	Jr.....Junior	Unc....Unclassified
So.....Sophomore	Sr.....Senior	Irr.....Irregular

Unclassified students are not matriculated as candidates for a degree. Irregular students are those holding degrees but registered for undergraduate work. In the colleges of Law, Medicine, Dentistry, and Pharmacy, students are classified as first-year, second-year, third-year, etc., indicated by the numbers 1, 2, 3, etc., or as post-graduate (PG). In the Library School, all regular students are classified as first-year, indicated by 1. (Students doing the second year of work in library science are registered in the Graduate School.) Since students in the Graduate School are not classified by year of work, the space in this column is used to show whether they are registered in the Urbana departments (indicated by "U") or in the Chicago departments (indicated by "C"). Students registered in extramural courses are indicated by "EM" in this column.

Sessions Attended.—In the sixth column, "S" indicates summer session, "I" indicates first semester, and "II" indicates second semester.
